Real 300-720 Exams, Exam 300-720 Reference

Our 300-720 Test Braindumps are by no means limited to only one group of people. Whether you are trying this exam for the first time or have extensive experience in taking exams, our 300-720 latest exam torrent can satisfy you. This is due to the fact that our 300-720 test braindumps are humanized designed and express complex information in an easy-to-understand language. You will never have language barriers, and the learning process is very easy for you. What are you waiting for? If you are preparing to take the test, you can rely on our learning materials. You will also be the next beneficiary. After you get Cisco certification, you can get boosted and high salary to enjoy a good life.

Cisco Email Security Appliance is a powerful tool that helps organizations protect their email from spam, viruses, and other threats. It provides advanced threat protection, data loss prevention, and email encryption capabilities, making it an essential tool for organizations of all sizes. By earning the Cisco 300-720 Certification, candidates can demonstrate their proficiency in using the Cisco Email Security Appliance to secure their organization's email.

Cisco Securing Email with Cisco Email Security Appliance Sample Questions (Q27-Q32):

NEW QUESTION # 27

When a network engineer is troubleshooting a mail flow issue, they discover that some emails are rejected with an SMTP code of 451 and the error message "#4.7.1 Unable to perform DMARC verification". In the DMARC verification profile on the Cisco Secure Email Gateway appliance, which action must be set for messages that result in temporary failure to prevent these emails from being rejected?

- A. No Action
- B. Ignore
- C. Accept
- D. Quarantine

Answer: C

Explanation:

Accept is the action that must be set for messages that result in temporary failure to prevent these emails from being rejected. Accept allows Cisco ESA to deliver the messages without applying any DMARC actions or modifications.

To configure the accept action for messages that result in temporary failure on Cisco ESA, the administrator can follow these steps:

* Select Mail Policies > DMARC Verification Profile and click Edit Settings for the DMARC verification profile that applies to the messages.

* Under DMARC Actions, select Accept from the drop-down menu for Messages That Result in Temporary Failure.

* Click Submit.

The other options are not valid actions for messages that result in temporary failure to prevent these emails from being rejected, because they either apply DMARC actions or modifications or do nothing.

NEW QUESTION # 28

Email encryption is configured on a Cisco ESA that uses CRES.

Which action is taken on a message when CRES is unavailable?

- A. It is encrypted by a Cisco encryption appliance.
- B. It is sent in clear text.
- **C. It is queued.**
- D. It is dropped and an error message is sent to the sender.

Answer: C

Explanation:

When CRES (Cisco Registered Envelope Service) is unavailable, Cisco ESA will requeue the message and attempt to resend it later, until the maximum number of retries or the maximum age of the message is reached. The message will not be sent in clear text, dropped, or encrypted by another appliance.

NEW QUESTION # 29

Which global setting is configured under Cisco ESA Scan Behavior?

- A. minimum depth of attachment recursion to scan
- B. attachment scanning timeout
- **C. actions for unscannable messages due to attachment type**
- D. minimum attachment size to scan

Answer: C

Explanation:

The global setting that is configured under Cisco ESA Scan Behavior is the actions for unscannable messages due to attachment type. This setting allows the administrator to specify what action to take when a message contains an attachment that cannot be scanned by the appliance, such as encrypted or password-protected files. The possible actions are:

* Deliver - Deliver the message normally.

* Drop - Drop the message silently without notifying the sender or recipient.

* Quarantine - Quarantine the message in a specified policy quarantine.

* Bounce - Bounce the message back to the sender with a specified reason.
