## 2026 Authoritative Nutanix NCP-DB-6.10: Dumps Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Download

As is known to us, getting the newest information is very important for all people to pass the exam and get the certification in the shortest time. In order to help all customers gain the newest information about the NCP-DB-6.10 exam, the experts and professors from our company designed the best NCP-DB-6.10 Study Materials. The IT experts will update the system every day. If there is new information about the exam, you will receive an email about the newest information about the NCP-DB-6.10 study materials.

### Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 Sample Questions (Q196-Q201):

#### NEW QUESTION # 196

When registering SAP HANA Database and Database Server VM there are several (Linux) OS configuration requirements that must be set before registering a database Or a database server VM. Which system file should the entry, secure\_pazh be configured in?

- A. /etc/sudoers
- B. 'etc/ profile

**Answer: A**

#### NEW QUESTION # 197

Where should an administrator perform an upgrade within the Era management interface?

- A. Profiles Software
- B. Alerts
- **C. Administration > Maintenance**
- D. Operations > Current Recent

**Answer: C**

Explanation:

In the Nutanix Era management interface, an administrator should perform an upgrade under the Administration > Maintenance section. As part of the upgrade process, the Era server is upgraded first, followed by all the Era cluster agents and database server agents in parallel. The Dashboard displays the current version and an option to upgrade the Era server to a latest version when a new version is available for upgrade. This ensures that the Nutanix Era environment is always up-to-date with the latest features and security updates.

#### **NEW QUESTION # 198**

An administrator needs to provide the least-privilege access to a newly-hired engineer whose task is to add new VLANs or IP Pools in NDB.

Which role should the administrator select to complete this task?

- A. Super Administrator
- B. Database Administrator
- **C. Infrastructure Administrator**
- D. Database Infrastructure Administrator

**Answer: C**

Explanation:

An Infrastructure Administrator is a role in NDB that has the permission to manage network and storage resources, such as VLANs, IP Pools, and Storage Containers. This role is suitable for the engineer who needs to add new VLANs or IP Pools in NDB. The other roles have either more or less privileges than required for this task. A Database Administrator can manage databases and database server VMs, but not network and storage resources. A Super Administrator can manage all aspects of NDB, but this is more than the least-privilege access needed. A Database Infrastructure Administrator can manage both databases and network and storage resources, but this is also more than the least-privilege access needed.

#### **NEW QUESTION # 199**

An administrator needs to enable multi-cluster to setup NDB HA. What should the administrator configure for the NDB Agent to satisfy this requirement?

- A. Compute Profile
- **B. Network Profile**
- C. Name Prefix
- D. Static VLAN

**Answer: B**

Explanation:

To enable multi-cluster setup for NDB High Availability (HA), the administrator must configure the NDB Agent with a Network Profile. A Network Profile defines the networking settings (e.g., VLANs, IP ranges) that the NDB Agent uses to communicate across clusters. This is critical for multi-cluster HA, as it ensures consistent network configuration for replication, failover, and data synchronization between clusters. The Network Profile must be properly configured to handle inter-cluster traffic and latency requirements (e.g., <25ms RTT).

#### **NEW QUESTION # 200**

Which two security options are available when configuring an SMTP server for sending alert notifications via email? (Choose two.)

- **A. SSL**

- B. DKIM
- **C. TLS**
- D. S/MIME

**Answer: A,C**

Explanation:

When configuring an SMTP server for sending alert notifications via email in NDB, the two security options available are SSL and TLS. These protocols encrypt the email communication between NDB and the SMTP server, ensuring the confidentiality and integrity of alert notifications.

NDB supports both options to accommodate different SMTP server configurations, with TLS being the more modern standard and SSL as a legacy option.

## NEW QUESTION # 201

.....

All the ActualTestsQuiz Nutanix NCP-DB-6.10 practice questions are real and based on actual Nutanix Certified Professional - Database Automation (NCP-DB) v6.10 (NCP-DB-6.10) exam topics.
