100% Pass Authoritative CIS-Discovery - Reliable Certified Implementation Specialist - Discovery Test Pattern

If you are preparing for the practice exam, we can make sure that the CIS-Discovery study materials from our company will be the best choice for you, and you cannot find the better study materials than our company'. There are a lot of advantages of our CIS-Discovery Study Materials, and then, I am going to introduce the special functions of our CIS-Discovery study materials in detail to you. We are hopeful that you will like our products.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q93-Q98):

NEW QUESTION # 93

Which service needs to be running on a host to detect a Windows device?

- A. WinkM
- B. CM
- C. WM
- D. SSH

Answer: A

NEW QUESTION # 94

Based on the image, which of the following is true?

□ Value `$name_details[1].exec_info+"-"+$process.executableDir`

- A. This Value cannot be used in a pattern step.
- B. There is a tabular variable named 'name_details'.
- **C. There is a scalar variable labeled '1'.**
- D. This is from a WMI query operation step.

Answer: C

Explanation:

The image provided shows a ServiceNow expression used to concatenate two pieces of information. The `$name_details[1]` suggests that 'name_details' is an array or a list variable, and we're accessing the second element (considering indexing starts at 0). This indicates that 'name_details' is not a tabular variable but rather a list or an array, and there is a scalar value labeled '1' which is being used to index this array. The 'exec_info' and 'executableDir' are likely attributes or properties of the objects within the 'name_details' array and '\$process' object, respectively. There is no indication that this is from a WMI query operation step, nor is there any inherent reason why this value could not be used in a pattern step. ServiceNow Discovery patterns can use such expressions to extract and concatenate data during the discovery process.

NEW QUESTION # 95

A Discovery Schedule contains a /24 subnet IP Range and a Shazzam batch size of 5000. How many times will a Shazzam probe be launched during discovery?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

A /24 subnet IP Range means that there are 256 possible IP addresses in the range, from 0 to 255. A Shazzam batch size of 5000 means that Discovery will send 5000 ICMP packets at a time to scan the IP addresses.

Therefore, Discovery will launch the Shazzam probe once for every 5000 IP addresses in the range, or $256 / 5000 = 0.0512$ times. Since the number of times must be an integer, Discovery will round up to 1 and launch the Shazzam probe once. However, since the Shazzam probe is launched for each MID Server that is assigned to the Discovery Schedule, the actual number of times will depend on how many MID Servers are available.

If there are N MID Servers, then the Shazzam probe will be launched N times, each sending 5000 ICMP packets to the same IP range. Therefore, the total number of times that the Shazzam probe will be launched during discovery is $N * 1 = N$.

NEW QUESTION # 96

How does MidServer communicate with ServiceNow.

Response:

- **A. Outbound by sending messages to ServiceNow on port 443**
- B. Bidirectional where ServiceNow sends messages to MidServer
- C. Outbound where ServiceNow sends messages to MidServer

Answer: A

NEW QUESTION # 97

Can we have different capabilities configured for MidServers in a load balanced Cluster.

Response:

- A. Yes
- **B. No**

Answer: B

NEW QUESTION # 98

.....

As far as we know, in the advanced development of electronic technology, lifelong learning has become more accessible, which means everyone has opportunities to achieve their own value and life dream though some ways such as the CIS-Discovery certification. With over a decade's endeavor, our CIS-Discovery practice materials successfully become the most reliable products in the industry. There is a great deal of advantages of our CIS-Discovery exam questions you can spare some time to get to know.
