Valid Dumps Trend Deep-Security-Professional Pdf & Deep-Security-Professional Related Certifications

Our company sells three kinds of Deep-Security-Professional guide torrent online whose contents are definitely same as each other, including questions and answers. The only distinct thing is that they have different ways to use. The PDF format of Deep-Security-Professional exam torrent is easy to download, prints, and browse learning, which can be printed on paper and can make notes anytime. You can learn anywhere, repeated practice, and use in unlimited number of times. SOFT/PC test engine of Deep-Security-Professional exam applies to Windows system computers. It can simulate the real operation test environment. The number of Download and install are unlimited. The number of computers of using Deep-Security-Professional Questions torrent is unlimited too. App/online test engine of the Deep-Security-Professional guide torrent is designed based on a Web browser, as long as a browser device is available. It has the functions of simulating examination, limited-timed examination and online error correcting.

Trend Micro Certified Professional for Deep Security Sample Questions (Q73-Q78):

NEW QUESTION # 73

What is the result of performing a Reset operation on a Deep Security Agent?

- A. A Reset operation forces the Deep Security Agent service to restart on the managed computer.
- B. A Reset operation generates Event information that can be used to troubleshoot Agent-to-Manager communication issues.
- C. A Reset operation forces an update to the Deep Security Agent software installed on a managed computer.
- **D. A Reset operation wipes out any Deep Security Agent settings, including its relationship with Deep Security Manager.**

Answer: D

NEW QUESTION # 74

Which of the following statements regarding the Integrity Monitoring Protection Module is true?

- **A. The Integrity Monitoring Protection Module can detect changes to the system, but lacks the ability to distinguish between legitimate and malicious changes.**
- B. Any changes to monitored system objects that are detected after a Recommendation Scan is run on the protected computer are assumed to be malicious.
- C. The Integrity Monitoring rules include a property that identifies whether a change to a monitored system object was performed as part of a legitimate operation.
- D. Any changes to the system objects monitored by the Integrity Monitoring Protection Module are assumed to be legitimate, however, an administrator can revise the status of the object modification to Malicious during a review of the Integrity Monitoring Events.

Answer: A

Explanation:

integrity-monitoring-set-up

NEW QUESTION # 75

Which of the following VMware components is not required to enable agentless protection using Deep Security.

- A. VMware vCenter
- **B. VMware vRealize**
- C. VMware ESXi
- D. VMware NSX

Answer: B

Explanation:

Integrate with VMware vRealize Operations Manager

NEW QUESTION # 76

An administrator enables Multi-Tenancy in Deep Security and creates multiple tenants. After a period of time, the administrator would like to review the usage and resource consumption by a specific tenant. How can the administrator retrieve this information?

- A. The administrator downloads the Tenant usage details from the Deep Security Agent on the Tenant computer.
- B. The administrator will not be able to retrieve this information without licensing and enabling the Multi-Tenancy Chargeback module in the Deep Security Manager Web console.
- C. The administrator could check the Multi-Tenancy log file for resource consumption details.
- **D. The administrator could generate a Tenant report from within the Deep Security Manager Web console.**

Answer: D

Explanation:

Usage and resource consumption for a tenant can be reviewed by generating tenant usage/chargeback reports directly in the Deep Security Manager Web console.

Option A is incorrect; the log file does not contain usage stats.

Option C is incorrect; no extra licensing is required for basic reporting.

Option D is incorrect; usage reports are generated in the manager, not on the agent.

NEW QUESTION # 77

Which of the following statements is true regarding software inventories used as part of the Application Control Protection Module?

- A. An administrator can share the inventory of allowed software with other computers protected by Deep Security Agents, by copying the inventory database file (ac.db) from the source computer.
- B. When an administrator allows software that would be otherwise blocked by the Enforcement Mode, it isn't added to the inventory of approved software. Instead, it is added to that computer's whitelist.
- C. Disable the Application Control Protection Module when installing software upgrades, otherwise, the new software will be prevented from installing.
- **D. An administrator can view the list of allowed software in the inventory from the Details tab for each individual Computer.**

Answer: D

Explanation:

The software inventory for Application Control is visible in the Deep Security Manager console under the Details tab for each protected computer. This inventory lists all approved and detected software components for that agent.

From the official documentation:

"Administrators can view and manage the Application Control inventory for each computer from the Details tab in the Deep Security Manager console. This inventory lists all allowed, blocked, and detected software." Option A is incorrect: You do not need to disable the module for upgrades; use Maintenance Mode or update rules.

Option C is incorrect: Inventory is not shared by copying database files.

Option D is incorrect: Allowed software is added to the inventory.
