Latest 350-701 Version - 350-701 Braindump Free

Dumpkiller Cisco 350-701 exam training materials are provided in PDF format and software format. It contains Cisco 350-701 exam questions and answers. These issues are perfect, Which can help you to be successful in the Cisco 350-701 Exam. Dumpkiller Cisco 350-701 exam comprehensively covers all syllabus and complex issues. The Dumpkiller Cisco 350-701 exam questions and answers is the real exam challenges, and help you change your mindset.

What is the cost of Implementing and Operating Cisco Security Core Technologies (SCOR 350-701)

- Format: Multiple choices, multiple answers
- Passing Score: 70%
- Number of Questions: 90-105
- Length of Examination: 90 minutes

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q451-Q456):

NEW QUESTION # 451

Drag and drop the descriptions from the left onto the correct protocol versions on the right.

Answer:

Explanation:

NEW QUESTION # 452

An engineer is implementing NTP authentication within their network and has configured both the client and server devices with the command `ntp authentication-key 1 md5 Cisc392368270`. The server at 1.1.1.1 is attempting to authenticate to the client at 1.1.1.2, however it is unable to do so. Which command is required to enable the client to accept the server's authentication key?

- A. `ntp peer 1.1.1.2 key 1`
- B. `ntp server 1.1.1.1 key 1`
- C. `ntp peer 1.1.1.1 key 1`
- D. `ntp server 1.1.1.2 key 1`

Answer: B

Explanation:

Explanation

To configure an NTP enabled router to require authentication when other devices connect to it, use the following commands:

```
NTP_Server(config)#ntp authentication-key 2 md5 securitytut
```

```
NTP_Server(config)#ntp authenticate
```

```
NTP_Server(config)#ntp trusted-key 2
```

Then you must configure the same authentication-key on the client router:

```
NTP_Client(config)#ntp authentication-key 2 md5 securitytut
```

```
NTP_Client(config)#ntp authenticate
```

```
NTP_Client(config)#ntp trusted-key 2
```

```
NTP_Client(config)#ntp server 10.10.10.1 key 2
```

Note: To configure a Cisco device as a NTP client, use the command `ntp server <IP address>`. For example:

```
Router(config)#ntp server 10.10.10.1. This command will instruct the router to query 10.10.10.1 for the time.
```

NEW QUESTION # 453

When configuring ISAKMP for IKEv1 Phase1 on a Cisco IOS router, an administrator needs to input the command `crypto isakmp key cisco address 0.0.0.0`. The administrator is not sure what the IP addressing in this command issued for. What would be the effect of changing the IP address from 0.0.0.0 to 1.2.3.4?

- A. All IP addresses other than 1.2.3.4 will be allowed
- B. The address that will be used as the crypto validation authority
- C. The key server that is managing the keys for the connection will be at 1.2.3.4
- D. **The remote connection will only be allowed from 1.2.3.4**

Answer: D

Explanation:

Explanation The command `crypto isakmp key cisco address 1.2.3.4` authenticates the IP address of the 1.2.3.4 peer by using the key cisco. The address of "0.0.0.0" will authenticate any address with this key

NEW QUESTION # 454

Email security has become a high priority task for a security engineer at a large multi-national organization due to ongoing phishing campaigns. To help control this, the engineer has deployed an Incoming Content Filter with a URL reputation of (-10 00 to -6 00) on the Cisco ESA Which action will the system perform to disable any links in messages that match the filter?

- A. FilterAction
- B. Quarantine
- C. ScreenAction

- **D. Defang**

Answer: D

Explanation:

Defanging is the process of modifying a URL in a message to prevent it from being clickable. This can help protect users from malicious links that have a low URL reputation score. Defanging is one of the actions that can be configured in the Incoming Content Filter on the Cisco ESA. The other actions are Quarantine, FilterAction, and ScreenAction. Quarantine sends the message to a quarantine area for further inspection.

FilterAction applies a predefined action such as drop, bounce, or deliver. ScreenAction displays a warning message to the user before allowing them to access the URL. Defanging is the only action that disables the links in the message without affecting the delivery or visibility of the message¹².
