

2026 Trustable HPE7-A06–100% Free Valid Test Syllabus | Valid Exam HPE7-A06 Practice

BONUS!!! Download part of Lead2PassExam HPE7-A06 dumps for free: <https://drive.google.com/open?id=1kLW7-ttR2ChYRxyAhriZ4Fg0h5uyH-4n>

Free demos offered by Lead2PassExam gives users a chance to try the product before buying. Users can get an idea of the HP HPE7-A06 exam dumps, helping them determine if it's a good fit for their needs. The demo provides access to a limited portion of the HPE7-A06 dumps material to give users a better understanding of the content. Overall, HPE7-A06 free demo is a valuable opportunity for users to assess the value of the Lead2PassExam study material before making a purchase. The HP provides 1 year of free updates of real questions. This offer allows students to stay up-to-date with changes in the exam's content.

The HPE Campus Access Switching Expert Written Exam (HPE7-A06) study material of Lead2PassExam is available in three different and easy-to-access formats. The first one is printable and portable HPE Campus Access Switching Expert Written Exam (HPE7-A06) PDF format. With the PDF version, you can access the collection of actual HP HPE7-A06 Questions with your smart devices like smartphones, tablets, and laptops.

Valid Exam HPE7-A06 Practice | HPE7-A06 Test Registration

As the old saying goes, practice is the only standard to testify truth. In other word, it has been a matter of common sense that pass rate of the HPE7-A06 study materials is the most important standard to testify whether it is useful and effective for people to achieve their goal. We believe that you must have paid more attention to the pass rate of the HPE7-A06 study materials. If you focus on the study materials from our company, you will find that the pass rate of our products is higher than other study materials in the market, yes, we have a 99% pass rate, which means if you take our the HPE7-A06 Study Materials into consideration, it is very possible for you to pass your exam and get the related certification.

HPE Campus Access Switching Expert Written Exam Sample Questions

(Q123-Q128):

NEW QUESTION # 123

Which issue may be causing the new door locks on the APs to not work?

- A. AT power to the AP is not enough.
- B. AT power to the AP is too much.
- C. AF power to the AP is not enough.
- D. BT power to the AP is too much.

Answer: C

Explanation:

New PoE-powered door locks, connected via the PoE passthrough port on Aruba APs, are not working. We need to find the likely cause related to PoE power.

* PoE Passthrough: An AP feature where the AP, powered by PoE from a switch, provides PoE power out to another device connected to one of its Ethernet ports.

* Power Budget: The AP must receive enough power from the switch via its PoE input (e.g., 802.3af, 802.3at, 802.3bt) to power itself and meet the power demand of the downstream device (the door lock).

* PoE Standards Power (Approx. Available to Device):

* 802.3af (PoE): ~13 Watts

* 802.3at (PoE+): ~25.5 Watts

* 802.3bt (PoE++): 51W (Type 3) or 71W (Type 4)

* Analysis: Modern APs (especially Wi-Fi 6/6E) can consume significant power themselves (>15W or >25W under load). Standard 802.3af PoE (supplying only ~13W) is often insufficient to power both a modern AP and a downstream PoE device like a door lock. The AP will power up, but won't enable PoE output if its input power budget is insufficient.

* Analysis of Options:

* A, B: Too much power (AT/BT) isn't the issue; devices only draw what they need.

* C: AF power (~13W) received by the AP is very likely not enough to power both the AP and the door lock.

* D: AT power (~25.5W) might be insufficient if the combined load of the AP and lock exceeds this, but AF being insufficient (C) is a more common limitation.

* Conclusion: Insufficient input power to the AP is the most common reason for PoE passthrough failure. 802.3af (PoE) power is often inadequate.

References: IEEE 802.3 PoE standards (af/at/bt), Aruba Access Point datasheets (PoE requirements, passthrough capabilities/budgets). This relates to "WLAN" (9%) and "Connectivity" (9%) objectives.

NEW QUESTION # 124

Which feature is supported on Ethernet Ring Protocol Switching (ERPS) ports?

- A. MLAG
- B. ISL
- C. MVRP
- D. loop-protect

Answer: D

Explanation:

ERPS (Ethernet Ring Protection Switching) already provides loop avoidance in a ring topology, but it still supports loop-protect on its ports. Loop-protect helps detect and prevent accidental bridging loops outside the ERPS control plane. Other features like ISL, MVRP, or MLAG are not supported on ERPS ring ports.

NEW QUESTION # 125

Drag and Drop Question

Match the network technology to the customer requirement.

□

Answer:

Explanation:

□

NEW QUESTION # 126

Network administrators are reporting that switches are taking a very long time to execute commands. Based on the configuration below, what is the most likely cause of the issue?

□

- A. Authentication fail-through is enabled.
- B. Too many administrators are logged in.
- **C. The primary TACACS+ server is unreachable.**
- D. A Denial of Service attack on the data plane.

Answer: C

Explanation:

The issue is that switches are taking a very long time to execute commands. The question points towards the AAA configuration as the context (though the specific configuration is missing).

* AAA and Command Latency: When AAA servers (like TACACS+ or RADIUS) are used for authentication, authorization, or accounting, the switch must communicate with these servers.

* Impact of Unreachable Servers: If the primary AAA server configured on the switch becomes unreachable (due to network issues, server downtime, or firewall rules), the switch will attempt to connect, wait for a configured timeout period (often several seconds), and only then potentially try a secondary server or fall back to local credentials (if configured). This connection attempt and timeout period occurring before command execution (if command authorization is enabled) or during login introduces significant delays.

* Analysis of Options:

* A: Too many administrators might strain resources, but AAA timeouts cause more predictable, long delays per action.

* B: Authentication fail-through only comes into play after the primary server times out. The timeout itself causes the delay.

* C: An unreachable primary TACACS+ (or RADIUS) server is a classic cause of slow logins and command execution delays due to connection timeouts.

* D: A DoS attack might cause general slowness but isn't specifically linked to the AAA configuration context provided.

* Conclusion: The most likely cause, given the context of AAA configuration and the symptom of slow command execution, is that the primary configured AAA server (like TACACS+) is unreachable, causing the switch to wait for timeouts.

References: AOS-CX Security Guide (AAA, TACACS+, RADIUS), general network troubleshooting for AAA latency. This relates to "Authentication/Authorization" (9%) and "Troubleshooting" (10%) objectives.

NEW QUESTION # 127

An engineer finds that a specific HPE switch interface has high error rates. Which two parameters are most likely causing this issue?

- A. LACP mode
- B. VLAN misconfiguration
- **C. Port speed**
- **D. Duplex mismatch**

Answer: C,D

NEW QUESTION # 128
