NEW QUESTION # 23
You are planning to use the Dashboard Landing Page template for Key Performance Indicators (KPIs), and a dashboard grid with information visualizations that highlight and explain business performance. Which is a required property of oj-sp-dashboard-landing-page?

- A. Page Title
- B. In Flow Back
- C. Primary Action
- D. Page Subtitle

Answer: A

Explanation:
Full Detailed in Depth Explanatio n:
The oj-sp-dashboard-landing-page is a Redwood component used to create dashboard-style pages in Oracle applications. According to the Redwood Pattern Book and component documentation, the Page Title (Option A) is a required property to define the dashboard's identity and purpose, ensuring clarity for users. Options B (Page Subtitle), C (In Flow Back), and D (Primary Action) are optional: subtitles enhance context but aren't mandatory, "In Flow Back" relates to navigation flows (not required), and primary actions are configurable but not essential for the component's basic functionality.

NEW QUESTION # 24
What is the minimum and maximum number of steps that can be configured on a Guided Process?

- A. Minimum 1 and maximum 10
- B. Minimum 2 and maximum 25
- C. Minimum 1 and maximum 50
- D. Minimum 4 and maximum 10

Answer: C

Explanation:

Full Detailed in Depth Explanatio n:
The Guided Process template in Redwood (and VBS) allows users to configure a sequence of steps for task flows. The minimum is 1 step (a single task), and the maximum is 50 steps, providing flexibility for complex processes. Option B's maximum of 10 is too restrictive, Option C's minimum of 4 is incorrect, and Option D's maximum of 25 underestimates the capacity.

NEW QUESTION # 25
What does a build pipeline in Visual Builder Studio do?

- A. Can only package an AppUI extension, which requires manual deployment
- B. Can only deploy an AppUI extension to a stand-alone VB instance
- C. Can deploy an AppUI extension to only a single FA instance
- D. Can deploy an AppUI extension to multiple FA instances

Answer: D

Explanation:
Full Detailed in Depth Explanatio n:
A build pipeline in Visual Builder Studio (VBS) automates the process of packaging, building, and deploying applications or extensions, including AppUI extensions for Oracle Fusion Applications (FA). It is designed to streamline Continuous Integration/Continuous Deployment (CI/CD) workflows. Option D is correct because VBS build pipelines can deploy AppUI extensions to multiple Fusion Application instances (e.g., development, test, and production environments) as configured in the pipeline settings. This flexibility is a key feature of VBS, allowing developers to target multiple environments without manual intervention. Option A is incorrect because deployment is not limited to stand-alone VB instances; it can target FA instances as well. Option B is wrong as it restricts deployment to a single FA instance, which contradicts VBS's multi-environment capability. Option C is inaccurate because the pipeline does more than just packaging-it automates deployment too.

- A. The overall perception and interaction a customer has with Oracle products
- B. The color scheme used in Oracle's branding
- C. A specific module for game development
- D. A single event or action

Answer: A

Explanation:
Full Detailed in Depth Explanatio n:
In Redwood, "experience" refers to the holistic user interaction with Oracle products (B), not a single event (A), color scheme (C), or gaming module (D).

- D. oj-sp-message-dialog-general
- E. oj-sp-message-banner-unsaved-changes
- F. oj-sp-message-dialog-destructive
