SAP持ってきた製品があなたにふさわしくないと感じることはよくありますか？ SAPラーニングガイドを使用することに決めた場合、問題に遭遇することは決してないことをお伝えしたいと思います。私たちの教材は、あなたが期待できないC_SEC_2405高品質を持っています。学習教材のガイダンスで経験を積むと、以前よりもC_SEC_2405時間を費やさず、明らかにSAP Certified Associate - Security Administrator進歩を感じることが出来ます。また、SAPテストクイズは進歩に役立つことがわかります。

SAP C_SEC_2405 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
トピック 2	• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
トピック 3	• Governance, Compliance, and Cybersecurity: This section of the exam measures the skills of compliance officers and covers the principles of governance, compliance, and cybersecurity of SAP systems. It includes understanding regulatory requirements and best practices for maintaining security. A critical skill evaluated is ensuring organizational compliance with relevant laws and policies.
トピック 4	• Authorization and Role Maintenance: This section of the exam measures the skills of SAP administrators and covers the management of user authorizations and roles within SAP systems. It emphasizes the processes involved in defining, maintaining, and approving roles to ensure secure access. A key skill assessed is managing role authorizations effectively to mitigate access risks.
トピック 5	• Public Cloud User and Role Management: This section of the exam measures the skills of SAP IT cloud Professionals and covers managing users and roles in public cloud environments for SAP applications.

JpexamはSAPのC_SEC_2405認定試験に対して問題集を提供しているサイトで、現場のSAPのC_SEC_2405試験問題と模擬試験問題集を含みます。ほかのホームページに弊社みたいな問題集を見れば、あとでみ続けて、弊社の商品を盗作することよくわかります。Jpexamが提供した資料は最も全面的で、しかも更新の最も速いです。

SAP Certified Associate - Security Administrator 認定 C_SEC_2405 試験問題 (Q63-Q68):

質問 # 63

Which tool can you use to modify the entities schema content across multiple repositories?

- A. SAP Business Application Studio
- B. SAP Cloud Identity Services Transformation Editor
- C. SAP BTP Account Explorer
- **D. SAP Cloud Identity Services Schemas app**

正解: D

解説:

* Context: Modifying entities schema content across multiple repositories is crucial for customizing identity services.

* Solution Description:

* The Schemas app in SAP Cloud Identity Services is specifically designed for managing schema content.

SAP Security References:

* SAP Cloud Identity Services Documentation

* SAP Schemas App User Guide

質問 # 64

In SAP S/4HANA Cloud Public Edition, what can you do with the Display Authorization Trace? Note: There are 3 correct answers to this question.

- **A. Display business roles granting specific access**
- **B. Analyze authorization check results for missing authorizations**
- C. Adjust role restrictions to further limit access when performing forensic analysis
- **D. Analyze authorization check results for already assigned authorizations**
- E. Adjust role restrictions to account for missing authorizations

正解: A、B、D

質問 # 65

What authorization object can be used to restrict which users a security administrator is authorized to maintain?

- A. S_USER_GRP
- **B. S_USER_GRP**
- C. S_USER_SAS
- D. S_USER_AUT

正解: B

解説:

In SAP systems, the authorization object S_USER_GRP is used to restrict which users a security administrator can maintain. This object controls access to user master records based on user groups, allowing administrators to manage only users assigned to specific groups. For example, by assigning a user group value in the S_USER_GRP object, an administrator's ability to create, change, or delete user accounts is limited to those within the specified group, enhancing segregation of duties and security. This is particularly useful in large organizations where different administrators are responsible for distinct sets of users. The other options are incorrect: S_USER_SAS is related to system administration services, S_USER_GRP does not exist in standard SAP, and

S_USER_AUT is used for authorizing the creation of authorizations in roles, not user maintenance. By leveraging S_USER_GRP, SAP ensures granular control over user management tasks, preventing unauthorized access to sensitive user data and maintaining compliance with security policies. This object is integral to the SAP authorization concept, ensuring that user administration is both secure and efficient.

質問 # 66

What must you do if you want to enforce an additional authorization check when a user starts an SAP transaction?

- A. Assign the authorization object to be checked to the chosen transaction code with transaction SU24 and set Default Status to "Yes".
- B. Assign the authorization object to be checked to the chosen transaction code in the SAP Default authorization data using transaction SU22 and set Check Indicator to "Check".
- C. Assign authorization object S_START to the chosen transaction code with transaction SU24 and specify the Program ID and Object Type.
- D. Assign the authorization object and permissions to the chosen transaction code using transaction SE93.

正解: C

解説:

To enforce an additional authorization check when a user starts an SAP transaction, you need to assign the specific authorization object to the transaction code. This ensures that the system performs an extra check against the user's authorizations before allowing access to the transaction.

* Use Transaction SU24:

* SU24 is the transaction used to maintain authorization default data for transactions and other executables. It allows you to assign authorization objects to transactions and set the check indicators.

* Assign Authorization Object S_START:

* Authorization Object S_START is used to control the start of transactions. By assigning this object to a transaction code, you can specify additional checks based on the Program ID and Object Type.

* In SU24, navigate to the desired transaction code and add S_START to its list of authorization objects.

* Specify Program ID and Object Type:

* Within the authorization object S_START, set the Program ID and Object Type fields to define the scope of the check.

* This setup ensures that when a user attempts to start the transaction, the system checks for the specified authorizations in their user profile.

SAP Security References:

* SAP Help Portal: Authorization Checks and SU24 Maintenance

* SAP Documentation: Using Authorization Object S_START for Transaction Start Checks

* SAP Note: Best Practices for Maintaining Authorization Data with SU24

質問 # 67

Which of the following are SAP Fiori Launchpad functionalities? Note: There are 2 correct answers to this question.

- A. SAP GUI
- B. Spaces
- C. Web Dynpro
- D. User Actions Menu

正解: B、D

解説:

The SAP Fiori Launchpad is a central entry point for accessing applications in SAP S/4HANA, and it includes specific functionalities to enhance user experience. "Spaces" is a key feature that organizes applications into logical groups, making navigation intuitive for users. The "User Actions Menu" provides personalized options, such as user settings, app finder, and logout, enabling users to interact efficiently with the system. In contrast, SAP GUI is a traditional interface for SAP systems, not a Fiori Launchpad feature, and Web Dynpro is a technology for web-based applications that may be accessed via the Launchpad but is not a core functionality. These distinctions ensure that the Fiori Launchpad remains a modern, user-friendly interface for SAP applications.
