

ISTQB ISTQB-CTFL Zertifikatsdemo & ISTQB-CTFL Quizfragen Und Antworten

BONUS!!! Laden Sie die vollständige Version der It-Pruefung ISTQB-CTFL Prüfungsfragen kostenlos herunter:
<https://drive.google.com/open?id=10PCm6IBnqI0INySmaLgaUYC9UIUGs6Bm>

Die ISTQB ISTQB-CTFL Dumps von It-Pruefung sind die besten Prüfungsunterlagen. Diese Dumps ist unbedingt die Unterlagen, die Sie für länger gesucht haben. Die sind die Prüfungsunterlagen, die speziell für die Prüfungsteilnehmer geschaffen sind. Es kann Ihnen helfen, in sehr kurzer Zeit ISTQB ISTQB-CTFL Zertifizierungsprüfung vorzubereiten und diese Prüfung sehr einfach zu bestehen. Wenn Sie nicht viel Zeit für die Prüfungsvorbereitung, die ISTQB ISTQB-CTFL Dumps von It-Pruefung die beste Wahl für sie sind. Damit können Sie Ihre Lerneffektivität verbessern und viel Zeit sparen.

Wir It-Pruefung bieten die besten Service an immer vom Standpunkt der Kunden aus. 24/7 online Kundendienst, kostenfreie Demo der ISTQB ISTQB-CTFL, vielfältige Versionen, einjährige kostenlose Aktualisierung der ISTQB ISTQB-CTFL Prüfungssoftware sowie die volle Rückerstattung beim Durchfall usw. Das alles ist der Grund dafür, dass wir It-Pruefung zuverlässig ist. Wenn Sie die ISTQB ISTQB-CTFL Prüfung mit Hilfe unserer Produkte bestehen, hoffen wir Ihnen, unsere gemeinsame Anstrengung nicht zu vergessen!

Kostenlose gültige Prüfung ISTQB ISTQB-CTFL Sammlung - Examcollection

ISTQB ISTQB-CTFL Zertifizierungsprüfung ist eine seltene und wertvolle Gelegenheit, mit der Sie sich verbessern können. Es gibt viele IT-Profis, die an dieser Prüfung teilnehmen. Durch ISTQB ISTQB-CTFL Zertifizierungsprüfung können Sie Ihre IT-Kenntnisse verbessern. Unsere It-Pruefung bietet Ihnen Prüfungsfragen zu ISTQB ISTQB-CTFL Zertifizierung. Das professionelle IT-Team aus It-Pruefung wird Ihnen die neuesten Prüfungsunterlagen bieten, damit Sie ihre Träume verwirklichen. It-Pruefung verfügt über die qualitativ hochwertigsten und neuesten Schulungsunterlagen zur ISTQB ISTQB-CTFL Zertifizierungsprüfung und sie können Ihnen helfen, die ISTQB ISTQB-CTFL Zertifizierungsprüfung erfolgreich zu bestehen. ISTQB ISTQB-CTFL Zertifizierungsprüfung ist eine eher wertvolle Prüfung in der IT-Branche. Und viele IT-Fachleute beteiligen sich an dieser Prüfung. Durch die ISTQB ISTQB-CTFL Zertifizierungsprüfung werden Ihre beruflichen Fertigkeiten verbessert. Unser It-Pruefung bietet Ihnen die Trainingsfragen zur ISTQB ISTQB-CTFL Zertifizierungsprüfung.

ISTQB Certified Tester Foundation Level (CTFL v4.0) ISTQB-CTFL Prüfungsfragen mit Lösungen (Q68-Q73):

68. Frage

Which of the following statements about error guessing is true?

- A. Experienced testers, when applying error guessing technique, can anticipate where errors, defects and failures have occurred and target their tests at those issues
- B. Error guessing refers to the ability of a system or component to continue normal operation despite the presence of erroneous inputs
- C. Experienced testers, when applying error guessing, rely on the use of a high-level list of what needs to be tested as a guide to find defects
- D. Error guessing is a system that adopts artificial intelligence to predict whether software components are likely to contain defects or not

Antwort: A

Begründung:

This answer is correct because error guessing is a test design technique where the experience and intuition of the tester are used to anticipate where errors, defects and failures have occurred or are likely to occur, and to design test cases to expose them. Error guessing can be based on factors such as the complexity of the system or component, the known or suspected weaknesses of the system or component, the previous history of defects, or the common types of errors in the domain or technology. Error guessing can be used as a complementary technique to other more systematic or formal techniques, or when there is insufficient information or time to apply them. 69. Frage

Given the following review process main activities and specific review activities:

- a. Planning
- b. Initiate review
- c. Issue communication and analysis
- d. Fixing and reporting
- 1. Creating defect reports
- 2. Estimating effort and timeframe
- 3. Recording updated status of defects
- 4. Selecting the people to participate
- 5. Distributing the work product and other material
- 6. Evaluating the review findings

Which of the following BEST matches the review process main activities with the appropriate specific review activities?

- A. 2-a, 4-b, 5-c, 1-d, 3-d, 6-d
- B. 2-a, 5-a, 1-b, 4-b, 3-c, 6-d
- C. 1-a, 4-b, 5-b, 6-c, 2-d, 3-d
- D. 2-a, 4-a, 5-b, 6-c, 1-d, 3-d

Antwort: D

Begründung:

Matching the main review process activities with the specific review activities, we see that planning includes estimating effort and timeframe (2) and selecting people to participate (4). Initiating a review involves distributing work products and other material (5). Issue communication and analysis includes evaluating the review findings (6). Fixing and reporting would entail creating defect reports (1) and recording the updated status of defects (3). References: ISTQB Certified Tester Foundation Level Syllabus v4.0, Section 3.2 "Review Process".

70. Frage

Which of the following does MOT describe a reason why testing is necessary?

- A. The customer decided that 100% branch coverage shall be achieved
- B. The risks associated with delivering the system are far higher than the cost of testing
- C. For avionics and pharmaceutical systems software testing is mandated by standards
- D. The acquisition of test automation tools was based on the assumption that it will be used in all projects

Antwort: D

Begründung:

Testing is necessary for various reasons, such as:

- * To detect defects and failures that may affect the quality, performance, reliability or security of a software product or system
 - * To verify that a software product or system meets its specified requirements, expectations and standards
 - * To validate that a software product or system fulfills its intended purpose and satisfies its stakeholders' needs
 - * To provide information and feedback about the status and risks of a software product or system
 - * To comply with regulations or contractual obligations that mandate testing for certain types of software products or systems
- The following statements describe some reasons why testing is necessary:
- * A) The customer decided that 100% branch coverage shall be achieved. This is a reason why testing is necessary, as it reflects a contractual obligation or a quality standard that requires testing to measure and achieve a certain level of code coverage.
 - * C) For avionics and pharmaceutical systems software testing is mandated by standards. This is a reason why testing is necessary, as it reflects a regulation or a compliance requirement that mandates testing for certain types of software products or systems that have high safety or security risks.
 - * D) The risks associated with delivering the system are far higher than the cost of testing. This is a reason why testing is necessary, as it reflects a risk-based approach that considers testing as an investment to reduce the probability and impact of potential failures or defects. The following statement does not describe a reason why testing is necessary:
 - * B) The acquisition of test automation tools was based on the assumption that it will be used in all projects. This is not a reason why testing is necessary, as it reflects a business decision or a resource allocation that does not justify the need or purpose of testing. Test automation tools are not always suitable or beneficial for all projects, and testing can be performed with or without test automation tools. 71. Frage

Which of the following statements about independent testing is WRONG?

- A. Independent testing is best suited for the system test level.
- B. A certain degree of independence makes the tester more effective at finding defects.
- C. Independent test teams may find other types of defects than developers who are familiar with the system's structure.
- **D. Independent testing is necessary because developers don't know any testing.**

Antwort: D

Begründung:

Independent testing is testing performed by a person or group that is independent of the development team.

Independent testing can have various degrees of independence, ranging from testers who are part of the same organization as developers to testers who are external contractors or consultants. Independent testing can have various benefits, such as reducing bias, increasing objectivity, improving quality, or providing different perspectives. Independent testing is not necessary because developers don't know any testing, as this is a wrong and disrespectful statement. Developers can perform various types of testing, such as unit testing, component testing, or integration testing. However, independent testing can complement developer testing by providing additional levels of verification and validation, such as system testing, acceptance testing, or non-functional testing. Verified References: [A Study Guide to the ISTQB® Foundation Level 2018 Syllabus - Springer], Chapter 2, page 16-17.

72. Frage

A Test Manager conducts risk assessment for a project. One of the identified risks is: "The sub-contractor may fail to meet his commitment". If this risk materializes, it will lead to delay in completion of testing required for the current cycle.

Which of the following sentences correctly describes the risk?

- A. It is a product risk since any risk associated with development timeline is a product risk.
- B. It is no longer a risk for the Test Manager since an independent party (the sub-contractor) is now managing it
- C. It is a project risk since successful completion of the project depends on successful and timely completion of the tests
- **D. It is a product risk since default on part of the sub-contractor may lead to delay in release of the product**

Antwort: D

Begründung:

* A product risk is a risk that affects the quality or timeliness of the software product being developed or tested¹. Product risks are related to the requirements, design, implementation, verification, and maintenance of the software product².

* The risk of the sub-contractor failing to meet his commitment is a product risk, as it could cause a delay in the completion of the testing required for the current cycle, which in turn could affect the release date of the product. The release date is an important aspect of the product quality, as it reflects the customer satisfaction and the market competitiveness of the product³.

* The other options are not correct because:

* A. It is not true that any risk associated with development timeline is a product risk. Some risks could be project risks, which are

risks that affect the management or control of the software project, such as budget, resources, schedule, or communication¹. For example, a risk of losing a key project stakeholder is a project risk, not a product risk.

* B. It is not true that the risk is no longer a risk for the Test Manager since an independent party is managing it. The Test Manager is still responsible for ensuring that the testing activities are completed according to the test plan and the quality objectives⁴. The Test Manager should monitor and control the sub-contractor's performance and communicate with him regularly to identify and mitigate any potential issues or deviations⁵.

* C. It is not clear what is meant by "object" in this option, but it could be interpreted as the software system under test or the test object⁶. In any case, the risk is not an object risk, as it does not affect the successful completion of the object, but rather the successful completion of the testing of the object. An object risk could be a risk that affects the functionality, reliability, usability, efficiency, maintainability, or portability of the software system under test². For example, a risk of the software system having a high complexity or a low testability is an object risk, not a product risk.
