## Unparalleled AB-Abdomen Exam Materials: Abdomen Sonography Examination Deliver You the Most Authentic Exam Prep - PassReview

Based on the research results of the examination questions over the years, the experts give more detailed explanations of the contents of the frequently examined contents and difficult-to-understand contents, and made appropriate simplifications for infrequently examined contents. AB-Abdomen test questions make it possible for students to focus on the important content which greatly shortens the students' learning time. With AB-Abdomen Exam Torrent, you will no longer learn blindly but in a targeted way. With AB-Abdomen exam guide, you only need to spend 20-30 hours to study and you can successfully pass the exam. You will no longer worry about your exam because of bad study materials. If you decide to choose and practice our AB-Abdomen test questions, our life will be even more exciting.

## ARDMS Abdomen Sonography Examination Sample Questions (Q142-Q147):

### NEW QUESTION # 142

Which structures converge to form the inferior vena cava?

- A. Right and left common iliac veins
- B. Superior mesenteric and splenic veins
- C. Right atrium and superior vena cava
- D. Right, left, and middle hepatic veins

**Answer: A**

Explanation:

The inferior vena cava (IVC) is formed by the confluence of the right and left common iliac veins at the level of approximately L5. The hepatic veins drain into the IVC superiorly but do not form it. The superior mesenteric and splenic veins join to form the portal vein, not the IVC.

According to Moore's Clinically Oriented Anatomy:

"The IVC begins at the level of L5 by the union of the right and left common iliac veins." Reference:

Moore KL, Dalley AF, Agur AMR. Clinically Oriented Anatomy. 8th ed. Wolters Kluwer, 2018.

Gray's Anatomy for Students, 4th ed., Elsevier, 2019.

**NEW QUESTION # 143**

Which vascular condition is most commonly associated with a wandering spleen?

- A. Rupture
- B. Portal hypertension
- C. Infarction
- D. Torsion

**Answer: D**

Explanation:

A wandering spleen occurs when the spleen is not adequately anchored by its supporting ligaments, allowing it to move freely within the abdomen. This increases the risk of splenic torsion, which compromises vascular supply and may result in infarction if not corrected.

According to Rumack's Diagnostic Ultrasound:

"The most serious complication of a wandering spleen is torsion, which may result in splenic infarction." Reference:

Rumack CM, Wilson SR, Charboneau JW, Levine D. Diagnostic Ultrasound. 5th ed. Elsevier, 2017.

Moore KL, Clinically Oriented Anatomy. 8th ed. Wolters Kluwer, 2018.

**NEW QUESTION # 144**

Hepatitis is classified into groups. Which of these four types are transmitted by fecal-oral route?

- A. Hepatitis C
- B. Hepatitis A
- C. Hepatitis D
- D. Hepatitis B

**Answer: B**

Explanation:

Hepatitis A is primarily transmitted via the fecal-oral route, often through contaminated food or water.

Hepatitis B, C, and D are transmitted through blood and body fluids.

According to CDC and WHO guidelines:

"Hepatitis A virus (HAV) is transmitted primarily by the fecal-oral route via ingestion of contaminated food or water." Reference:

CDC. Viral Hepatitis Surveillance - United States, 2020.

WHO. Hepatitis A Fact Sheet, 2022.

**NEW QUESTION # 145**

Which organ is held in place by the lienorenal, gastrosplenic, and phrenocolic ligaments?

- A. Spleen
- B. Pancreas
- C. Left kidney
- D. Stomach

## Answer: A

Explanation:

The spleen is suspended in the left upper quadrant by several peritoneal ligaments, including:

\* Lienorenal (splenorenal) ligament - attaches spleen to the left kidney.

\* Gastrosplenic ligament - attaches spleen to the stomach.

\* Phrenocolic ligament - supports the spleen inferiorly between diaphragm and colon.

These ligaments stabilize the spleen's position while allowing some mobility.

According to Moore's Clinically Oriented Anatomy:

"The spleen is connected to the stomach by the gastrosplenic ligament and to the posterior abdominal wall (near the left kidney) by the splenorenal (lienorenal) ligament. The phrenocolic ligament provides inferior support." Reference:

Moore KL, Dalley AF, Agur AMR. Clinically Oriented Anatomy. 8th ed. Wolters Kluwer, 2018.

Gray's Anatomy for Students, 4th ed., Elsevier, 2019.

-

## NEW QUESTION # 146

What is the innermost layer of the gut wall?

- A. Mucosa
- B. Serosa
- C. Muscularis externa
- D. Submucosa

## Answer: A

Explanation:

The mucosa is the innermost layer of the gastrointestinal wall, consisting of epithelium, lamina propria, and muscularis mucosae. It is responsible for absorption and secretion. The submucosa lies just outside the mucosa.

According to Moore's Clinically Oriented Anatomy:

"The mucosa is the innermost layer of the gastrointestinal tract, responsible for nutrient absorption and secretion." Reference:

Moore KL, Dalley AF, Agur AMR. Clinically Oriented Anatomy. 8th ed. Wolters Kluwer, 2018.

Rumack CM, Diagnostic Ultrasound, 5th ed. Elsevier, 2017.
