Topic 3	• Describe the components and benefits of Anypoint Platform for system integration: This domain covers Anypoint Platform's integration components, connectors, runtime • control planes, deployment options, and reusable Exchange assets.
Topic 4	• Describe the components and benefits of Anypoint Platform for API management: This domain focuses on Anypoint Platform's API management features, lifecycle development, and advantages of API-led connectivity.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q47-Q52):

NEW QUESTION # 47
A team has completed the build and test activities for a Mule application that implements a System API for its application network.
Which Anypoint Platform component should the team now use to both deploy and monitor the System API implementation?

- A. Anypoint Exchange
- B. Runtime Manager
- C. API Manager
- D. Design Center

Answer: B

Explanation:
Runtime Manager: This is the interface within the Anypoint Control Plane used to manage the lifecycle of deployments5.
Capabilities:
Deploy: You upload the JAR file here to deploy it to CloudHub, Runtime Fabric, or On-Prem servers.
Monitor: Once deployed, it provides dashboards for CPU usage, Memory usage, and status (Started/Stopped).
Why others are incorrect:
API Manager: Manages policies (security) and gateways, not the deployment of the application artifact itself.
Design Center: For creating the app, not deploying it.

NEW QUESTION # 48
What is an ad8vantage that Anypoint Platf9orm offers by providing universal API management and Integration-Platform-as-a-Service (iPaaS) capabilities in a unified platform?

- A. Ability to use a single control plane for both full-lifecycle API management and integration
- B. Ability to use a single iPaaS to manage and integrate all API gateways
- C. Ability to use a single connector to manage and integrate all APIs
- D. Ability to use a single iPaaS to manage all API developer portals

Answer: A

Explanation:
Unified Platform: Many vendors offer either API Management (APIM) or Integration (iPaaS) as separate tools. Anypoint Platform combines them.
Single Control Plane: The primary advantage is having a single interface (The Anypoint Control Plane) where you can do everything: design APIs, build integrations, deploy them, govern them with policies, and monitor them.
Impact: This reduces complexity, lowers costs (no need to buy two separate stacks), and streamlines the workflow from

development to operations.

NEW QUESTION # 49

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

- A. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- B. Switch from a design-first to a code-first approach for IT development
- C. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business
- D. Hire more IT developers, architects, and project managers to increase IT delivery

Answer: C

Explanation:
The IT Delivery Gap: This question addresses the "IT Delivery Gap"-the widening gap between business demands and IT's capacity to deliver.
The Solution (New Operating Model): MuleSoft recommends shifting from a centralized factory model to an Asset-Based consumption model.
Decoupling (Option A): By using API-led Connectivity:
Central IT builds reusable System APIs (unlocking core assets/systems of record) and governs them.
Lines of Business (LOB) consume these assets to build their own Process and Experience APIs (Innovation)2.
Why others fail:
(B) Hiring doesn't scale linearly with exponential demand.
(C) Removing governance creates security risks ("Shadow IT").
(D) Code-first ignores reuse and leads to technical debt.

NEW QUESTION # 50

According to MuleSoft, a synchronous invocation of a RESTful API using HTTP to get an individual customer record from a single system is an example of which message exchange pattern? 6(Note: The options are partially truncated in the PDF, but based on the provided text "A. Multicast" 7 and standard MuleSoft certification context, the correct pattern is Request-Response).

- A. Request-Response
- B. Acknowledge Only
- C. Fire-and-Forget
- D. Multicast

Answer: A

Explanation:
Comprehensive and Detailed Explanation:
Request-Response: The HTTP protocol is inherently synchronous and follows the Request-Response pattern. The client sends a request (the GET command) and waits for the server to process the query and send back the data (the 200 OK response).
Synchronous Nature: The "Synchronous" keyword in the question is the biggest clue. The client processing is blocked or expects an immediate return of data before proceeding.
Why "Multicast" is incorrect: Multicast is a one-to-many pattern (usually asynchronous). It involves sending one message to multiple receivers (like a topic subscription), which contradicts the question's scenario of getting a "record from a single system." 8

NEW QUESTION # 51

An organization's IT team must secure all of the internal APIs within an integration solution by using an API proxy to apply required authentication and authorization policies.

- A. Integration Platform-as-a-Service (IPaaS)
- B. API Management (APIM)
- C. Robotic Process Automation (RPA)
- D. Electronic Data Interchange (EDI)

Answer: B

Explanation:

API Management (APIM): This category of software capability focuses on the Governance, Security, and Lifecycle of APIs. 7 The Role of the Proxy: In MuleSoft's API Manager (the APIM component), you create an API Proxy. This proxy sits in front of the backend API implementation. It intercepts incoming requests, checks security policies (like Client ID enforcement or OAuth 2.0), and only forwards valid requests to the backend.

Why others are incorrect:

iPaaS: Refers to the integration/building platform (connecting systems), though modern platforms like Anypoint combine both iPaaS and APIM. The specific act of securing via proxy is an APIM function.

EDI: Standard for B2B document exchange (like Purchase Orders).

RPA: Automating manual tasks on UI screens.
