CIS-HAM Exam is conducted online and can be taken from anywhere in the world.

## ServiceNow Certified Implementation Specialist - Hardware Asset Management Sample Questions (Q58-Q63):

### NEW QUESTION # 58

Which of an organization's assets are managed using stockrooms?

- A. All hardware and software assets
- B. Just consumable assets
- C. All disposable assets
- D. All available stock, consumable or not

**Answer: D**

Explanation:

Explanation

According to the ServiceNow Hardware Asset Management documentation, stockrooms are places to which assets are assigned. Stockrooms can contain any type of asset, whether it is consumable or not, as long as it is available for use or deployment. Stockrooms are separate, standalone entities in the Asset Management application that help manage assets across locations and monitor stock levels<sup>1</sup>. Stockrooms are not limited to hardware or software assets, nor are they only for disposable assets.

ServiceNow Hardware Asset Management: Stockrooms

### NEW QUESTION # 59

When creating a stock rule that replenishes from a vendor, what is a primary requirement for the warehouse stockroom? Choose 2 answers

- A. The stockroom manager must have a valid time zone
- B. The stockroom manager must have a valid mobile phone
- C. The stockroom must have an assigned manager
- D. The stockroom manager must have a valid email address
- E. The stockroom must have an assignment group

**Answer: C,D**

Explanation:

According to the ServiceNow Hardware Asset Management documentation, a stockroom is a location where assets are stored and managed. A stockroom must have an assigned manager who is responsible for overseeing the stockroom operations and inventory. The stockroom manager must have a valid email address to receive notifications and alerts related to the stockroom, such as low stock levels, stock transfers, and stock orders.

The other options are not primary requirements for the warehouse stockroom. The stockroom does not need to have an assignment group, a valid time zone, or a valid mobile phone.

### NEW QUESTION # 60

Select the three main components of the data certification process. (Choose three.)

- A. Run the certification
- B. Create the certification filter
- C. Certify the certification
- D. Create the certification schedule
- E. Assign the certification tasks

**Answer: B,C,D**

**NEW QUESTION # 61**

Assets can be moved between stockrooms by using:

- A. Transfer rules
- B. Stock rules
- C. Stock orders
- **D. Transfer orders**

**Answer: D**

Explanation:

Explanation

According to the ServiceNow Hardware Asset Management documentation, assets can be moved between stockrooms by using transfer orders. A transfer order is a record that tracks the movement of assets from one stockroom to another. A transfer order can be created manually by the stock manager or automatically by the system based on predefined rules or workflows<sup>1</sup>. A transfer order contains information such as the source and destination stockrooms, the assets to be transferred, the shipment details, and the status of the transfer<sup>2</sup>.

The other options are not correct because:

Stock orders are records that track the procurement of assets from vendors, not the movement of assets between stockrooms<sup>3</sup>.

Stock rules are rules that define the minimum and maximum stock levels for each asset model in a stockroom, not the movement of assets between stockrooms.

Transfer rules are rules that define the conditions and actions for creating transfer orders automatically, not the records that track the movement of assets between stockrooms.

**NEW QUESTION # 62**

Classes are represented as tables in the ServiceNow database. Which is the base asset class?

- **A. alm\_asset**
- B. cmdb\_hardware
- C. alm\_hardware
- D. cmdb\_asset

**Answer: A**

Explanation:

Explanation

Classes are represented as tables in the ServiceNow database that define the attributes and relationships of a specific type of record<sup>1</sup>. The base asset class is the `alm_asset` table, which contains the common fields and properties for all types of assets, such as hardware, software, consumable, etc.<sup>2</sup>. The `alm_asset` table is extended by other asset classes, such as `alm_hardware`, `alm_software`, `alm_consumable`, etc., which add more specific fields and properties for each asset type<sup>2</sup>. The `cmdb_asset` table is not a class, but a view that joins the `alm_asset` table and the `cmdb_ci` table, which is the base configuration item (CI) class<sup>3</sup>. The `cmdb_hardware` table is a CI class, not an asset class, that contains the common fields and properties for all types of hardware CIs, such as computers, devices, network equipment, etc.<sup>4</sup>.
