Free PDF Quiz Valid Salesforce - Plat-Admn-301 Reliable Exam Preparation

In this cut-throat competitive world of Salesforce, the Salesforce Plat-Admn-301 certification is the most desired one. But what creates an obstacle in the way of the aspirants of the Salesforce Certified Platform Administrator II (Plat-Admn-301) certificate is their failure to find up-to-date, unique, and reliable Salesforce Certified Platform Administrator II (Plat-Admn-301) practice material to succeed in passing the Salesforce Plat-Admn-301 certification exam.

Salesforce Certified Platform Administrator II Sample Questions (Q155-Q160):

NEW QUESTION # 155

AW Computing (AVVC) has customers in multiple countries. AWC would like to set up advanced currency management for its system.

Which two considerations should AWC be aware of prior to implementing this change to the existing system?

Choose 2 answers

- A. Historical trend reports will only use the last dated exchange rate.
- B. Opportunities will only display sales in the customer's localized currency.
- C. Once enabled, advanced currency management cannot be disabled.
- D. When a currency is added to an organization's List of supported currencies, it cannot be deleted.

Answer: C,D

Explanation:

When a currency is added to an organization's list of supported currencies, it cannot be deleted and once enabled, advanced currency management cannot be disabled are two considerations that AW Computing should be aware of prior to implementing this change to the existing system. Adding a currency to an organization's list of supported currencies is an irreversible action that allows users to enter and view amounts in that currency for standard and custom objects that have currency fields. Enabling advanced currency management is also an irreversible action that allows administrators to define dated exchange rates for opportunities and opportunity products based on close dates or product dates instead of using static conversion rates

NEW QUESTION # 156

The administrator at AW Computing implements multi-factor authentication using the Salesforce Authenticator app downloaded on company-provided iPhones. A sales rep breaks their phone and needs to update an opportunity record.

How should the administrator grant access for the sales rep?

- A. Add the sales rep's IP address to the trusted IP ranges.
- B. Delegate multi-factor identification to the sales rep.
- C. Generate a temporary identity verification code for the rep.
- D. Instruct the sales rep to log in from the company's VPN.

Answer: C

Explanation:

To grant access for the sales rep who broke their phone and needs multi-factor authentication using Salesforce Authenticator app, the administrator can generate a temporary identity verification code for them. This code allows users who don't have their verification method available to log in securely without compromising their account security. References:

https://help.salesforce.com/s/articleView?id=sf.identity_verification_codes.htm&type=5

NEW QUESTION # 157

The administrator at AW Computing has received an email for a system error indicating that their organization has reached its hourly limit processing workflow time triggers.

Which two processes should the administrator review? Choose 2 answers

- A. Debug Logs
- B. Time-Based Workflows
- C. Paused now Interviews
- D. Apex Triggers

Answer: A,B

Explanation:

Time-based workflows are a type of workflow that execute actions based on a specific time trigger, such as a certain number of days before or after a date field on a record. Time-based workflows can cause delays in processing because they are added to a queue and processed in one-hour batches. If the queue is large or the system is busy, the actions may not execute at the exact time they are scheduled. Therefore, time-based workflows can contribute to reaching the hourly limit for processing workflow time triggers. References:

https://help.salesforce.com/s/articleView?id=sf.workflow_time_action_considerations.htm&type=5

NEW QUESTION # 158

The salts team at Universal Containers has asked the administrator to build functionality to automatically update the account checkbox field 'Opportunity Created' to checked when at least one related opportunity has been created.

What feature should the administrator use to build this functionality?

- A. Record-triggered flow
- B. Assignment rule
- C. Screen flow
- D. Workflow rule

Answer: A

Explanation:

Record-triggered flow is a feature that allows administrators to automate actions that occur when a record is created or updated. Record-triggered flow can perform actions such as updating fields, creating records, sending emails, or invoking Apex code. Record-triggered flow can be used to update the account checkbox field 'Opportunity Created' when at least one related opportunity has been created

NEW QUESTION # 159

On the Planet custom object, Ursa Major Solar's sales director wants only certain action buttons to appear depending on if a given planet is defined as gaseous.

Which Lightning component should the administrator define dynamic action buttons?

- A. Activities
- B. Related Lists
- C. Highlights Panel
- D. Record Detail

Answer: C

Explanation:

The Highlights Panel is a Lightning component that displays key information about a record at the top of the page. You can customize the Highlights Panel to show different actions based on the record type or other criteria. In this case, you can define dynamic action buttons for the Planet object that appear only if the gaseous field is true or false. This way, you can show different actions for different types of planets.

References: https://help.salesforce.com/s/articleView?id=sf.lex_page_layouts_highlights_panel.htm&type=5
