

SC-300 Valid Mock Exam & SC-300 Authorized Test Dumps

Latest Version: 11.0

Question: 1

You need to meet the authentication requirements for leaked credentials. What should you do?

- A. Enable federation with PingFederate in Azure AD Connect.
- B. Configure Azure AD Password Protection.
- C. Enable password hash synchronization in Azure AD Connect.
- D. Configure an authentication method policy in Azure AD.

Answer: C

Reference:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/steps-secure-identity>

Question: 2

You need to configure the MFA settings for users who connect from the Boston office. The solution must meet the authentication requirements and the access requirements. What should you configure?

- A. named locations that have a private IP address range
- B. named locations that have a public IP address range
- C. trusted IPs that have a public IP address range
- D. trusted IPs that have a private IP address range

Answer: C

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition>
Location offer your country set, IP ranges MFA trusted IP and corporate network VPN gateway IP address: This is the public IP address of the VPN device for your on-premises network. The VPN device requires an IPv4 public IP address. Specify a valid public IP address for the VPN device to which you want to connect. It must be reachable by Azure Client Address space: List the IP address ranges that you want routed to the local on-premises network through this gateway. You can add multiple address space ranges. Make sure that the ranges you specify here do not overlap with ranges of other networks your virtual network connects to, or with the address ranges of the virtual network itself.

Question: 3

NEW QUESTION # 194

You have an Azure AD tenant that contains the users shown in the following table.

The tenant has the authentication methods shown in the following table.

Which users will sign in to cloud apps by matching a number shown in the app with a number shown on their phone?

- A. User3 only
- **B. User1 only**
- C. User1 and User2 only
- D. User2 only
- E. User2 and User3 only

Answer: B

Explanation:

According to Microsoft's SC-300: Microsoft Identity and Access Administrator Study Guide and Exam Ref SC-300, the behavior of the sign-in process depends on which authentication methods are enabled for the user or their group. Azure AD supports multiple strong authentication methods, such as Microsoft Authenticator app, FIDO2, and SMS, which can be targeted to specific user groups.

The question specifies that the tenant's configuration enables the following methods:

* FIDO2 # Group2 (Yes)

* Microsoft Authenticator app # Group1 (Yes)

* SMS # Group3 (Yes)

And user membership is:

* User1 # Group1

* User2 # Group2

* User3 # Group3

The key phrase in the question is:

"Sign in to cloud apps by matching a number shown in the app with a number shown on their phone." This specific sign-in experience refers to the number matching feature in the Microsoft Authenticator app.

* Number matching is a security enhancement in Azure AD MFA that requires the user to confirm a sign-in by matching a number displayed on the sign-in screen with the number shown in their Microsoft Authenticator app notification.

* According to Microsoft Learn:

"When using the Microsoft Authenticator app for MFA, users will be prompted to enter or match a number displayed on the screen. This feature strengthens authentication by preventing accidental approvals." Therefore:

* Only User1, who is a member of Group1 (the group enabled for Microsoft Authenticator app), will experience number matching when signing in.

* User2 uses FIDO2, which employs a hardware key or biometric verification - not number matching.

* User3 uses SMS, which involves a one-time passcode (OTP) - again, not number matching.

Hence, only User1 will sign in to cloud apps using number matching.

NEW QUESTION # 195

You have a hybrid Microsoft 365 subscription that contains the users shown in the following table.

You plan to deploy an on-premises app1. App1 will be registered in Azure AD and will use Azure AD Application Proxy.

You need to delegate the installation of the Application Proxy connector and ensure that User1 can register App1 in Azure AD. The solution must use the principle of least privilege.

Which user should perform the installation, and which role should you assign to User1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

According to the Microsoft SC-300: Identity and Access Administrator Study Guide and Microsoft Learn module "Implement and manage Application Proxy for on-premises apps", Azure AD Application Proxy requires that the connector installation be performed by a user with either the Global Administrator or Application Administrator or Cloud Application Administrator role.

The Application Proxy connector must be installed by a user who can register and manage applications in Azure AD. The documentation specifies that both Application Administrator and Cloud Application Administrator roles can perform Application Proxy connector installation. Since the question requires adherence to the principle of least privilege, Admin3 (Cloud Application Administrator) is the most appropriate user - because this role grants the required permissions without the broader rights of the Global Administrator.

"Cloud Application Administrator can create, manage, and delegate enterprise applications and Application Proxy connectors, without tenant-wide permissions."

Therefore, Admin3 should perform the installation.

After the connector is installed, User1 needs to register App1 in Azure AD. The role required to register and configure application registrations is the Application Developer role.

According to Microsoft documentation:

"Users assigned the Application Developer role can register applications in Azure AD and manage app registrations they own." This role is the least privileged role that allows creating new application registrations, unlike Application Administrator or Cloud Application Administrator, which can manage all apps tenant-wide.

Therefore, assign User1 the role of Application Developer.

NEW QUESTION # 196

You have an Azure Active Directory (Azure AD) tenant that has an Azure Active Directory Premium Plan 2 license. The tenant contains the users shown in the following table.

You have the Device Settings shown in the following exhibit.

User1 has the devices shown in the following table.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 197

You have a Microsoft 365 E5 subscription and an Azure subscription. You need to meet the following requirements:

* Ensure that users can sign in to Azure virtual machines by using their Microsoft 365 credentials.

* Delegate the ability to create new virtual machines.

What should you use for each requirement? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

Answer:

Explanation:

Explanation:

NEW QUESTION # 198

The Microsoft SC-300 certification will further demonstrate your expertise in your profession and remove any room for ambiguity on the hiring committee's part. People need to increase their level by getting the Microsoft SC-300 Certification. You can choose flexible timings for the learning Microsoft SC-300 exam questions online and practice with Microsoft SC-300 exam dumps any time.
