IT Specialist INF-306 New Study Materials - INF-306 Valid Test Fee

In order to make life better, attending IT Specialist certification examinations will be the best choice for every IT workers. Passing INF-306 exam and obtaining a certification help candidates get salary raise and position promotion opportunities. It will be a fast and convenient road to success for the certification with our IT Specialist INF-306 Practice Test Engine. As for our guaranteed pass policy, our products are too good a change to miss for ambitious people.

IT Specialist HTML5 Application Development Sample Questions (Q15-Q20):

NEW QUESTION # 15

The following two images show a web page that uses a responsive layout displayed on a mobile device and on a PC.
Displayed on a mobile device:

The layout stacks the content vertically.

Displayed on a computer monitor:

The layout displays the content cards horizontally in multiple columns.

Review the images on the left.

Complete the statements by selecting the correct option from each drop-down list.

Instead of media queries, this layout is created with responsive

- flex boxes
- grid system
- relative positioning

To fill the header section, use the property with the value

-
- auto
- contain
- cover

- background-attachment
- background-clip
- background-repeat
- background-size

Answer:

Explanation:

Instead of media queries, this layout is created with responsive

flex boxes
grid system
relative positioning

To fill the header section, use the property with the value

auto
contain
cover

background-attachment
background-clip
background-repeat
background-size

Explanation:

First drop-down: flex boxes

Second drop-down: background-size

Third drop-down: cover

The layout changes from a stacked mobile layout to a multi-column desktop layout without relying on media queries. That behavior is commonly achieved with responsive flex boxes, where items can wrap naturally based on the available width. The header image must fill the available header area on both mobile and desktop. For that requirement, the correct CSS property is background-size, and the correct value is cover.

background-size: cover scales the image so the entire header area is filled, even if part of the image is cropped. contain would preserve the full image but could leave empty space, and auto would keep the image at its natural size.

NEW QUESTION # 16

Review the markup segment. Which entry will validate successfully according to the required pattern?

- A. AGbe-23h-234-HBG6
- B. Kgyn-23-3978-Uhj6
- C. kukX-04-4938-WJDF
- D. y7Ts-A34876-ASFr

Answer: C

Explanation:

The valid entry is A, assuming the OCR-corrupted option represents the intended secret-code format: four letters, a hyphen, two digits, a hyphen, four digits, a hyphen, and four letters. The HTML pattern attribute defines a regular expression that an input value must satisfy during constraint validation. MDN specifies that pattern is used to define a regular expression the input value must match. In the intended pattern, the first group must contain exactly four alphabetic characters, the second group exactly two numeric digits, the third group exactly four numeric digits, and the final group exactly four alphabetic characters. Option A satisfies that structure: kukX is four letters, 04 is two digits, 4938 is four digits, and WJDF is four letters. Option B fails because the final group Uhj6 contains a digit. Option C fails because the first group includes a digit and the digit grouping/hyphen structure is wrong. Option

D fails because 23h contains a letter where only digits are allowed. References/topics: HTML5 form validation, pattern attribute, regular-expression validation, text input constraints.

NEW QUESTION # 17

You are drawing on the canvas defined by the white square.

At which x, y coordinate is the upper-left corner of the filled square?

- A. 0,50
- B. 50,50
- C. 0,0
- D. 50,0

Answer: B

Explanation:

The correct coordinate is 50,50. In an HTML5 canvas, the coordinate system begins at the upper-left corner of the canvas. The x-coordinate increases as you move to the right, and the y-coordinate increases as you move downward. Therefore, 0,0 represents the top-left corner of the entire white canvas area. In the displayed image, the filled black square is not positioned at the top-left edge, top-center, or left-center of the canvas.

Instead, its upper-left corner is offset both horizontally and vertically from the origin. Among the available choices, 50,50 is the only coordinate that moves the square 50 units to the right and 50 units down from the canvas origin. This matches the visual placement of the filled square inside the white canvas. Option A would place the square at the canvas origin. Option B would place it along the left side, halfway down. Option C would place it along the top edge, halfway across. References/topics: HTML5 canvas coordinate system, x/y positioning, drawing rectangles, fillRect(x, y, width, height).

NEW QUESTION # 18

Review the grid container requirements and mockup on the left. Which markup should you use to define the grid container?

- A. Incorrectly places named area strings under grid-template-columns.
- B. `.grid-container { display: grid; grid-template-areas: " heading heading heading heading heading heading " " menu content content content right right " " menu contact contact contact contact " ; grid-gap: 10px; background-color: orange; padding: 10px; }`
- C. Incorrectly places named area strings under grid-template-rows.
- D. Uses grid-template-columns and grid-template-rows with percentage and pixel sizing.

Answer: B

NEW QUESTION # 19

You want to display a message box showing the user's current latitude and longitude as identified by the user's browser.

Complete the code by selecting the correct option from each drop-down list.

Note: You will receive partial credit for each correct selection.

```
if (  ) {
```

- navigator.geolocation
- window.location

- showLocation
- navigator.geolocation
- window.location

- getCurrentPosition(showLocation)
- getCurrentPosition(window.location)
- showLocation(navigator.geolocation)
- showLocation(window.location)

```
}  
function showLocation(position) {  
    alert(position.coords.latitude + "," + position.coords.longitude);  
}
```

Answer:

Explanation:

```
if (  ) {
```

- navigator.geolocation
- window.location

- showLocation
- navigator.geolocation
- window.location

- getCurrentPosition(showLocation)
- getCurrentPosition(window.location)
- showLocation(navigator.geolocation)
- showLocation(window.location)

```
}  
function showLocation(position) {  
    alert(position.coords.latitude + "," + position.coords.longitude);  
}
```

VCE

Explanation:

First drop-down: navigator.geolocation

Second drop-down: navigator.geolocation

Third drop-down: getCurrentPosition(showLocation)

The correct API object is navigator.geolocation because browser-based geographic location is exposed through the Geolocation API, not through window.location. window.location represents the current page URL and navigation state; it does not provide latitude or longitude. The first selection checks whether the browser supports geolocation by evaluating navigator.geolocation. Inside the block, the same object must be used to request the user's current position. The correct method is getCurrentPosition(showLocation), which requests the device's current location and passes a position object to the callback function when the location is available. The callback then reads position.coords.latitude and position.coords.longitude and displays those values with alert(). The alternatives that pass window.location are incorrect because they provide page- location information rather than geographic coordinates. The alternatives that call showLocation(...) directly are also incorrect because the browser must first retrieve the actual position object. References/topics:

Geolocation API, navigator.geolocation, getCurrentPosition(), callback functions, latitude and longitude.

NEW QUESTION # 20

.....

PracticeVCE provides proprietary preparation guides for the certification exam offered by the INF-306 exam dumps. In addition to containing numerous questions similar to the INF-306 exam, the INF-306 Exam Questions are a great way to prepare for the INF-306 exam dumps. The IT Specialist INF-306 mock exam setup can be configured to a particular style and arrive at unique questions.
