Quiz Useful Appian - ACA-100 - Appian Certified Analyst Exam Simulations

With the advent of knowledge times, we all need some professional certificates such as Appian ACA-100 to prove ourselves in different working or learning condition. So making right decision of choosing useful practice materials is of vital importance. Here we would like to introduce our Appian ACA-100 practice materials for you with our heartfelt sincerity.

Appian Certified Analyst Sample Questions (Q24-Q29):

NEW QUESTION # 24

Of the choices provided, which are the three most appropriate use cases for Appian?

- A. The customer needs to be able to run their application in a browser
- B. The customer needs to have one site tab for each of their seven personas
- C. The customer needs to perform large-scale extract, transform, and load (ETL) operations
- D. The customer needs to be able to embed the application within their own web page
- E. The customer needs to be able to run their application on mobile devices

Answer: A,B,E

Explanation:

Appian is a low-code platform designed for building enterprise applications with a focus on flexibility, user experience, and integration capabilities. The most appropriate use cases for Appian include:

Mobile Compatibility (B):

Appian supports mobile-first design, allowing applications to be easily accessed and used on mobile devices without requiring separate development efforts.

This capability is critical for businesses that need their workforce to access applications on the go.

Multiple Site Tabs for Personas (C):

Appian allows for the creation of different site tabs for different user personas, each with a tailored user experience.

This is ideal for organizations with distinct user groups who need customized interfaces and access to specific parts of the application.

Browser-Based Application (D):

Appian applications are web-based and can be accessed directly from a browser, ensuring easy access and a consistent user experience across different platforms.

Why Not Other Options?:

A . Large-Scale ETL Operations: Appian is not primarily designed for heavy data extraction, transformation, and loading (ETL) tasks, which are typically handled by specialized ETL tools.

E . Embedding in Web Pages: While Appian allows for embedding certain components, it is not the primary focus or strength of the platform compared to full-featured applications.

NEW QUESTION # 25

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Scrum Master
- B. Product Owner
- C. Sponsor
- D. Appian Analyst

Answer: B

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and

ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 26

You are part of an Agile team, and your responsibilities and attributes include:

A keen understanding of the business, the customer, and the market

The ability to clearly express product backlog items

The ability to prioritize the backlog to optimize the value of what the team will deliver The ability to order the items in the product backlog to best achieve goals and missions.

What is your role name?

- A. Scrum Master
- **B. Product Owner**
- C. Sponsor
- D. Appian Analyst

Answer: B

Explanation:

The responsibilities and attributes described are aligned with the role of a Product Owner in an Agile team. The Product Owner is responsible for maximizing the value of the product resulting from the work of the development team. They have a deep understanding of the business, customer needs, and market trends, and they use this knowledge to manage and prioritize the product backlog.

Role of Product Owner:

Understanding the Business: The Product Owner must understand the business context to prioritize work that delivers the most value.

Expressing Product Backlog Items: The Product Owner is responsible for defining and clearly expressing the items in the product backlog.

Prioritizing and Ordering the Backlog: The Product Owner prioritizes and orders the backlog items to optimize the team's output and ensure alignment with business goals.

Why Not Other Options?:

A . Appian Analyst: While an Appian Analyst may have some similar responsibilities, the specific role of managing the product backlog and optimizing the value delivered by the team is the core responsibility of the Product Owner.

B . Scrum Master: The Scrum Master facilitates the Scrum process but does not manage the product backlog.

D . Sponsor: The Sponsor typically provides financial support and strategic direction but does not manage day-to-day product backlog activities.

The Product Owner role is crucial in ensuring that the development team is working on the most valuable features and that the product aligns with business and market needs.

NEW QUESTION # 27

What is the primary benefit of using Appian's Record Type feature?

- A. It allows for the creation of static forms.
- B. It enables the integration of third-party APIs.
- C. It automates user interface design.
- **D. It facilitates the display of external data in an integrated manner.**

Answer: D

NEW QUESTION # 28

Which one of the following Appian object combinations allows you to directly access and use data from the Appian database?

- A. An expression rule with an integration call
- B. A process model that uses an Export to Excel smart service
- C. An interface object with an integration call
- **D. An expression rule with a query**

Answer: D

Explanation:

In Appian, the combination of an expression rule with a query allows you to directly access and use data from the Appian database. Expression rules are used to define business logic, while queries are used to retrieve data from the database.

Expression Rule with a Query:

An expression rule can be used to execute a query against the Appian database to retrieve data.

This combination allows you to filter, sort, and manipulate the data retrieved directly from the database within your application logic. The `a!queryEntity()` function is commonly used within an expression rule to fetch data from a specific entity in the database.

Why Not Other Options?:

A . An expression rule with an integration call: This option is used for retrieving data from external systems, not directly from the Appian database.

C . A process model that uses an Export to Excel smart service: This is used for exporting data to Excel but does not directly access the database for querying purposes.

D . An interface object with an integration call: This combination is also used for interfacing with external systems rather than directly accessing the Appian database.

Implementation in Appian:

Define an expression rule that uses `a!queryEntity()` to fetch data from a specific table or view in the Appian database.

The query can be customized with filters, sorting, and paging to retrieve the exact data needed for the application.
