```

Which NETCONF statement type is represented by +--rw address\* [ip]?

- A. submodule
- B. container
- C. list
- D. leaf-list

**Answer: C**

Explanation:

The NETCONF statement type represented by "+--rw address\* [ip]" is a 'list'. In YANG, which is the data modeling language used by NETCONF, a 'list' statement defines a sequence of list entries. Each entry is like a row in a table. The "+" indicates that this is a

configuration data node, "rw" means read-write, and the asterisk (\*) signifies that multiple address entries are allowed (hence it's a list), with "ip" being the key for each unique entry in the list. References: Automating Cisco Enterprise Solutions Official Cert Guide
