ExamDiscuss can develop well until now. Our developmental force comes from those who have obtained C-BCBDC-2505 exam certification with using our products. Today the C-BCBDC-2505 exam software provided by our ExamDiscuss has been tested by more and more candidates, which has helped them get the C-BCBDC-2505 exam certification. You can download our free demo after you enter the homepage of our website. We hope that you can recognize our product. Once there is any update of C-BCBDC-2505 Exam software coming out after you purchased, we will immediately inform you, and make you ease to prepare for the exam.

If you are busy with your work or study and have little time to prepare for your exam, then our exam dumps will be your best choice. C-BCBDC-2505 exam braindumps are high quality, you just need to spend about 48 to 72 hours on practicing, and you can pass the exam just one time. In addition, we are pass guarantee and money back guarantee for C-BCBDC-2505 Exam Materials, if you fail to pass the exam, and we will give you full refund. We have online and offline service, and if you have any questions for C-BCBDC-2505 training materials, you can consult us, and we will give you reply as soon as possible.

Prep4sure C-BCBDC-2505 test dumps & pass4sure of SAP C-BCBDC-2505 exam

In addition, you can print these SAP C-BCBDC-2505 PDF questions for paper study in this format of ExamDiscuss product frees you from restrictions of time and place as you can study C-BCBDC-2505 exam questions from your comfort zone in your spare time. The second version is the web-based format of the SAP C-BCBDC-2505 Practice Test. Browsers such as Internet Explorer, Microsoft Edge, Firefox, Safari, and Chrome support the web-based practice exam.

SAP C-BCBDC-2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.
Topic 2	<ul style="list-style-type: none"> SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.
Topic 3	<ul style="list-style-type: none"> SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q61-Q66):

NEW QUESTION # 61

Which of the following data source objects can be used for an SAP Datasphere Replication Flow? Note: There are 2 correct answers to this question.

- A. Google Big Query dataset
- B. ABAP CDS view
- C. Oracle database table
- D. MS Azure SQL table

Answer: B,C

Explanation:

SAP Datasphere Replication Flows are designed for efficient and continuous data transfer from source systems into Datasphere. For these flows, specific types of data source objects are supported to ensure robust and reliable replication. Two common and highly supported data source objects are an ABAP CDS view (Core Data Services view) and an Oracle database table. ABAP CDS views are particularly relevant for replicating data from SAP source systems (like SAP S/4HANA or SAP ERP), as they provide a semantically rich and optimized way to access business data. Oracle database tables represent a broad category of third-party relational databases from which data can be replicated. While Datasphere offers connectivity to various cloud data warehouses like Google BigQuery or MS Azure SQL for virtual access or snapshotting, Replication Flows are typically used for continuous, high-volume data ingestion from operational databases and SAP systems using their native database tables or views like CDS views.

NEW QUESTION # 62

A company wants to enable self-service data access for analysts while maintaining centralized control over source data. Which SAP Business Data Cloud capabilities help meet these requirements?

There are 3 correct answers to this question.

Response:

- A. Remote table access to avoid duplication
- B. Data replication via CSV uploads

- C. Exporting data to Excel for distribution
- D. Business Builder for semantic modeling
- E. Role-based access management

Answer: A,D,E

NEW QUESTION # 63

You created a story and want to share it with an external agent, who does not have SAP Analytics Cloud. You decide to export the story as a file. Which file type can be used?

Please choose the correct answer.

Response:

- A. .csv
- B. .html
- C. .xlsx
- D. .pdf

Answer: D

NEW QUESTION # 64

Which operation is implemented by the Foundation Services of SAP Business Data Cloud?

- A. Storage of raw data inside a CDS view.
- B. Execution of machine learning algorithms to generate additional insights.
- C. Data transformation and enrichment to generate a data product.
- D. Generation of an analytic model by adding semantic information.

Answer: C

Explanation:

The Foundation Services component of SAP Business Data Cloud (BDC) is responsible for orchestrating the fundamental processes of data preparation and productization. Specifically, a key operation implemented by Foundation Services is data transformation and enrichment to generate a data product. Foundation Services takes raw data ingested from various business applications and applies necessary transformations, cleanses it, and enriches it with additional context or calculated attributes. This process is crucial for creating high-quality, consumable data products, which are curated and semantically rich datasets designed for specific business use cases. While machine learning algorithms are executed by Intelligent Applications (which consume these data products), and analytic models are built in SAP Datasphere (which is part of the BDC ecosystem), Foundation Services focuses on the foundational work of preparing and productizing the data itself, ensuring it's ready for advanced analytics and consumption.

NEW QUESTION # 65

A healthcare organization is using SAP Business Data Cloud and needs to maintain an audit trail of all changes made to financial data models. Which features help achieve this?

There are 3 correct answers to this question.

Response:

- A. Lineage tracking
- B. Business Catalog publication
- C. Manual logs in Excel
- D. Version history
- E. Change history view

Answer: A,D,E

NEW QUESTION # 66

.....
