Salesforce Plat-Dev-210認證考試是目前IT人士報名參加的考試中很受歡迎的一個認證考試。通過了Salesforce Plat-Dev-210認證考試不僅能使你工作和生活帶來提升，而且還能鞏固你在IT領域的地位。但是事實情況是它通過率確很低。

Salesforce Plat-Dev-210 考試大綱：

主題	簡介
主題 1	Integration Procedures: This section measures the skills of an Integration Architect and involves designing and configuring Integration Procedures to automate processes and integrate systems. It requires comparing and contrasting different elements and configurations within Integration Procedures to meet specific use cases. Candidates are also tested on selecting the correct elements and properties to satisfy functional requirements, ensuring seamless data flow and process automation.
主題 2	Expression Sets & Decision Matrices: This section measures the skills of a Logic Designer and covers the configuration and application of Expression Sets and Decision Matrices within Omnistudio tools. It requires demonstrating an understanding of how Expression Sets evaluate conditions and how Decision Matrices use rule-based logic to determine outcomes. This knowledge is essential for automating decisions and streamlining complex business processes.

主題 3	OmniScripts: This portion of the exam measures the skills of a Business Analyst and focuses on the use of OmniScripts to create dynamic, guided user experiences. It includes comparing and contrasting various OmniScript elements and their configurations to fulfill given use cases. The section also examines the candidate's understanding of the JSON structure that supports OmniScripts, as well as the ability to select appropriate elements and properties to address functional requirements effectively.
主題 4	OmniStudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of OmniStudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.
主題 5	Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.

Plat-Dev-210權威考題，Plat-Dev-210更新

近來，隨著IT技術的不斷快速發展，學習IT技術的人越來越多。這也導致在IT行業工作的人越來越多。於是，IT行業的競爭愈發激烈了。同樣在IT行業工作，並且有著IT夢的你，肯定不希望被別人趕上甚至超過吧？那麼，這就需要你不斷提升自己的技能，向別人證明你自己的實力。那麼怎樣才能證明你自己的能力呢？越來越多的人選擇參加IT認定考試取得認證資格來證明自己的實力。你也想获得认证资格吗？首先来参加SalesforceのPlat-Dev-210认定考试吧。这是Salesforce的最重要的考试，同时也是被业界广泛认证的资格。

最新的 Salesforce Developer Plat-Dev-210 免費考試真題 (Q34-Q39):

問題 #34

A developer writes an OmniScript that includes a DataRaptor that updates the Account statue based on information provided from the OmniScript. The information must be updated only if the Account record already exists. Otherwise, a new account must be created.

How should the developer accomplish this task?

- A. Check Overwrite Target for all Null input checkbox on the Account id field
- B. Populate the Lookup object and Lookup fields
- **C. Check the Upsert key and is required for Upsert checkboxes on the Account id field**
- D. Check the Upsert key checkbox on the Account Status field

答案：C

解題說明：

According to the OmniStudio Developer Guide, "To upsert a record, select the Upsert Key checkbox for the field that contains the unique identifier for the record. If you want to create a new record when no match is found, select Is Required for Upsert." Therefore, the correct answer is B.

問題 #35

A developer creates an Integration Procedure with a Set values and a DataRaptor Extract Action that requires AccountId as a key. When the developer previews the Integration Procedure, the developer enters the AccountId correctly and executes the preview. The developer sees the dataextracted by the DataRaptor in the Debug Log, but the response is empty. What is the likely cause of this issue?

- A. The Response cannot be previewed directly.
- B. The AccountId used for the preview is invalid.
- C. A Response Action was not added to the Integration Procedure.
- D. The DataRaptor Action did not have the Add Response To Response JSON property set to true.

答案： D

解題說明：

The Add Response To Response JSON property on the DataRaptor Action indicates that the output of the DataRaptor should be added to the response JSON of the Integration Procedure. If this property is not set to true, the response will be empty even if the DataRaptor extracts data successfully.

問題 #36

In an OmnoScript, a developer needs to configure a Disclosure element to require user input only if the user already checked a Non-Disclosure Agreement Checkbox.

How should the developer configure the conditional view to meet this requirement?

- A. Disable read only if true
- B. Show element if true
- C. Set element to optional if false
- D. Set element to require if true

答案： D

解題說明：

Setting the element to require if true allows the developer to configure a Disclosure element to require user input only if a condition is met. In this case, the condition is that the user already checked a Non-Disclosure Agreement Checkbox. The other options are either incorrect or irrelevant for this requirement.

問題 #37

A developer has a requirement to create a child FlexCard that contain all of its parent FlexCard's records in a Datatable.

- A. {Records}
- B. {recordId}
- C. {Params records}
- D. {Records[0]}

答案： A

解題說明：

The correct syntax for passing all of the parent FlexCard's records to a child FlexCard is {Records}, which represents an array of records. The other options are incorrect because they either use an invalid syntax or refer to a single record instead of an array of records.

問題 #38

A developer needs to configure a DataRaptor to retrieve data from a single object. The structure of the output data does not need to be changed.

Following best practices, which type of DataRaptor should the developer use?

- A. DataRaptor Turbo Extract
- B. DataRaptor Transform
- C. DataRaptor Extract
- D. DataRaptor Load

答案： A

解題說明：

A DataRaptor Turbo Extract is a simplified version of a DataRaptor Extract that can retrieve data from a single object without
