## Palo Alto Networks Cloud Security Professional Sample Questions (Q132-Q137):

### NEW QUESTION # 132

Which two statements apply to the Defender type Container Defender - Linux?

- A. It is implemented as runtime protection in the userspace.
- B. It is incapable of filesystem runtime defense.
- C. It is deployed as a container.
- D. It is deployed as a service.

**Answer: A,C**

Explanation:

The Defender type "Container Defender - Linux" in Prisma Cloud is typically deployed as a container. This deployment method allows the Defender to integrate seamlessly into containerized environments, providing runtime protection and monitoring for container activities. By running as a container, the Container Defender can leverage the native capabilities of the container

orchestration platform, such as Kubernetes, to provide security features like threat detection, vulnerability management, and compliance enforcement within the containerized environment. This approach ensures that the security protections are closely aligned with the dynamic and scalable nature of containerized applications.

#### NEW QUESTION # 133

On which cloud service providers can you receive new API release information for Prisma Cloud?

- A. AWS, Azure, GCP, IBM
- B. AWS, Azure, GCP, Oracle, IBM
- C. AWS, Azure, GCP, Oracle, Alibaba
- D. AWS, Azure, GCP, IBM, Alibaba

**Answer: C**

Explanation:

Prisma Cloud, developed by Palo Alto Networks, is known for its comprehensive cloud security capabilities across various cloud service providers (CSPs). The integration and support extend to major CSPs, including AWS (Amazon Web Services), Azure (Microsoft's Cloud), GCP (Google Cloud Platform), Oracle Cloud, and Alibaba Cloud. This wide range of support ensures that organizations leveraging multi-cloud environments can maintain consistent security postures across all their cloud assets. The information regarding supported CSPs by Prisma Cloud can typically be found in their official documentation and release notes, which detail the features, integrations, and enhancements specific to each CSP.

#### NEW QUESTION # 134

An S3 bucket within AWS has generated an alert by violating the Prisma Cloud Default policy "AWS S3 buckets are accessible to public". The policy definition follows:

config where cloud.type = 'aws' AND api.name='aws-s3api-get-bucket-acl' AND json.rule='((((acl.grants[?(@.grantee=='AllUsers')]) size > 0) or policyStatus.isPublic is true) and publicAccessBlockConfiguration does not exist) or ((acl.grants[?(@.grantee=='AllUsers')]) size > 0) and publicAccessBlockConfiguration.ignorePublicAcls is false) or (policyStatus.isPublic is true and publicAccessBlockConfiguration.restrictPublicBuckets is false)) and websiteConfiguration does not exist" Why did this alert get generated?

- A. configuration of the S3 bucket
- B. anomalous behaviors
- C. network traffic to the S3 bucket
- D. an event within the cloud account

**Answer: A**

Explanation:

The alert "AWS S3 buckets are accessible to public" is generated due to the configuration of the S3 bucket, which has been set in a way that allows public access. The policy definition provided checks for various conditions that would make an S3 bucket publicly accessible, such as grants to 'AllUsers', the absence of a 'publicAccessBlockConfiguration', or specific configurations that do not restrict public access. Therefore, the alert is triggered by the configuration settings of the S3 bucket that violate the policy's criteria for public accessibility.

#### NEW QUESTION # 135

What is the frequency to create a compliance report? (Choose two.)

- A. Weekly
- B. Recurring
- C. One time
- D. Monthly

**Answer: B,C**

Explanation:

In Prisma Cloud, compliance reports can be generated on a one-time basis or on a recurring schedule. The option for a one-time report allows users to generate a specific report instantly based on the current state of the environment. The recurring option enables

users to set up automatic generation of reports at regular intervals, such as weekly or monthly, to track compliance over time. This functionality ensures continuous compliance monitoring and helps in maintaining security standards across cloud resources.

#### NEW QUESTION # 136

Which set of steps is the correct process for obtaining Console images for Prisma Cloud Compute Edition?

- A. To retrieve Prisma Cloud Console images using basic authentication: 1. Access [registry.paloaltonetworks.com](https://registry.paloaltonetworks.com) and authenticate using "docker login." 2. Retrieve the Prisma Cloud Console images using "docker pull."
- B. To retrieve Prisma Cloud Console images using URL authentication: 1. Access [registry-auth.twistlock.com](https://registry-auth.twistlock.com) and authenticate using the user certificate. 2. Retrieve the Prisma Cloud Console images using "docker pull."
- C. To retrieve Prisma Cloud Console images using URL authentication: 1. Access [registry-url-auth.twistlock.com](https://registry-url-auth.twistlock.com) and authenticate using the user certificate. 2. Retrieve the Prisma Cloud Console images using "docker pull."
- D. To retrieve Prisma Cloud Console images using basic authentication: 1. Access [registry.twistlock.com](https://registry.twistlock.com) and authenticate using "docker login." 2. Retrieve the Prisma Cloud Console images using "docker pull."

**Answer: A**

Explanation:

Prisma Cloud, part of Palo Alto Networks' cloud security suite, offers Console images that can be retrieved for deployment in various environments. The correct process for obtaining these images involves using basic authentication with Docker, a widely-used containerization platform. Users must first access the official Palo Alto Networks registry at [registry.paloaltonetworks.com](https://registry.paloaltonetworks.com). Here, they are required to authenticate using the "docker login" command, which prompts for credentials. Upon successful authentication, users can then use the "docker pull" command to retrieve the Prisma Cloud Console images. This method ensures secure access to the latest Console images for deployment within an organization's infrastructure, aligning with best practices for container image management and deployment.
