

SDS 100% Correct Answers, Certification SDS Training

What's more, part of that PassTorrent SDS dumps now are free: https://drive.google.com/open?id=1jSs_ua_BjTF3vQ30FmxXcGNLZ3mOML1

We all know that Senior Data Scientist (SDS) exam dumps are an important section of the SDS exam that is purely based on your skills, expertise, and knowledge. So, we must find quality SDS Questions that are drafted by industry experts who have complete knowledge regarding the SDS Certification Exam and can share the same with those who want to clear the SDS exam. The best approach to finding Senior Data Scientist (SDS) exam dumps is to check the PassTorrent that is offering the SDS practice questions.

This is a DASCA SDS practice exam software for Windows computers. This SDS practice test will be similar to the actual Senior Data Scientist (SDS) exam. If user wish to test the DASCA SDS study material before joining PassTorrent, they may do so with a free sample trial. This SDS Exam simulation software can be readily installed on Windows-based computers and laptops. Since it is desktop-based DASCA SDS practice exam software, it is not necessary to connect to the internet to use it.

>> SDS 100% Correct Answers <<

100% Pass SDS - Senior Data Scientist –The Best 100% Correct Answers

The PassTorrent experts regularly add these changes in the PassTorrent SDS exam dumps questions so that you do not miss a single SDS exam update. With the purchasing of PassTorrent SDS exam practice questions you get an opportunity to get free PassTorrent SDS Exam Dumps questions updates for up to 1 year from the date of PassTorrent SDS exam questions purchase.

DASCA Senior Data Scientist Sample Questions (Q15-Q20):

NEW QUESTION # 15

Which of the following is the common evolutionary algorithm of neural networks?

- A. Genetic algorithm
- B. Genetic programming
- C. Evolution strategy
- D. All of the above

Answer: D

Explanation:

Evolutionary algorithms are optimization techniques inspired by natural selection. They are often applied in neural network optimization for evolving architectures, weights, or hyperparameters.

Genetic Algorithm (Option A): Uses selection, crossover, and mutation to evolve neural network parameters.

Genetic Programming (Option B): Evolves computer programs or expressions; can be applied to evolve neural network structures.

Evolution Strategy (Option C): Focuses on optimization using mutation and adaptation of parameters.

Since all are used as evolutionary approaches in neural networks, the correct answer is Option D (All of the above).

Reference:

NEW QUESTION # 16

JSON takes hierarchical data structures and serializes them into:

- A. Plain text format
- B. Plain string format
- C. None of the above
- D. Any desired format
- E. Both A and B

Answer: E

Explanation:

JSON (JavaScript Object Notation) is a lightweight data-interchange format widely used for storing and exchanging structured or semi-structured data. JSON allows hierarchical (tree-like) structures, such as nested objects and arrays, to be serialized into a textual representation.

Option A (Plain text format): Correct. JSON files are stored as plain text, making them human-readable and language-independent.

Option B (Plain string format): Correct. JSON objects are transmitted as strings across networks (e.g., via APIs, RESTful services).

Option C: Incorrect. JSON does not serialize into "any format," but specifically into text/string-based formats.

Option D: Correct. Since JSON is both plain text and transmitted as string format, the right answer is both A and B.

Option E: Incorrect.

Thus, JSON serializes hierarchical data into plain text and string formats.

NEW QUESTION # 17

Which of the following is CORRECT?

- i. CDMO should NOT own the data lake, the data warehouse, or any of the underlying data architecture or technologies.
- ii. CDMO should own the data lake, the data warehouse, or any of the underlying data architecture or technologies.
- iii. CIO should NOT own the data lake, the data warehouse, or any of the underlying data architecture or technologies.
- iv. CIO should own the data lake, the data warehouse, or any of the underlying data architecture or technologies.

- A. ii, iii
- B. i, iii
- C. ii, iv
- D. i, iv

Answer: D

Explanation:

The Chief Data Monetization Officer (CDMO) is responsible for driving value extraction from data assets, not owning infrastructure. By contrast, the Chief Information Officer (CIO) traditionally owns technology infrastructure, including data lakes, warehouses, and data architectures.

Statement i: Correct. CDMO should NOT own data infrastructure. Their role is strategic - monetizing insights, not managing systems.

Statement ii: Incorrect. CDMO focuses on monetization, not architecture ownership.

Statement iii: Incorrect. CIO indeed does own these systems.

Statement iv: Correct. CIO owns the data lake, data warehouse, and underlying architectures/technologies.

Thus, the correct combination is i and iv # Option C.

NEW QUESTION # 18

SpamAssassin has been developed to detect:

- A. Email with big attachments
- **B. Spam emails**
- C. None of the above
- D. Email with virus

Answer: B

Explanation:

Apache SpamAssassin is one of the most widely used open-source tools for spam email detection.

It applies a rule-based system combined with Bayesian filtering, heuristics, and collaborative filtering methods to classify incoming emails as spam or legitimate.

Option A (Spam emails): Correct, this is the main function.

Option B (Big attachments): Incorrect. Large attachment filtering is not its primary purpose.

Option C (Email with virus): Incorrect. That falls under antivirus or malware detection tools, not SpamAssassin.

Option D: Incorrect since A is valid.

Thus, the correct answer is Option A (Spam emails).

NEW QUESTION # 19

Which of the following is correct for Markov chain?

- A. A Markov chain is the state of a system at sequential points in time
- **B. Both B and C**
- C. Both A and B
- D. A Markov chain is a sequence of random variables X_1, X_2
- E. A Markov chain is a sequence of fixed variables X_1, X_2

Answer: B

Explanation:

A Markov chain is a stochastic process describing a sequence of possible events, where the probability of each event depends only on the state attained in the previous step (the Markov property).

Option A: Incorrect. The variables are random, not fixed.

Option B: Correct. Markov chains represent the state of a system at sequential time points.

Option C: Correct. A Markov chain is indeed a sequence of random variables $\{X_1, X_2, \dots\}$ that satisfy the Markov property.

Option D: Incorrect, since A is wrong.

Option E: Correct, because both B and C are valid.

Thus, the correct answer is Option E (Both B and C).
