We try our best to provide the most efficient and intuitive DS0-001 learning materials to the learners and help them learn efficiently. Our DS0-001 exam reference provides the instances, simulation and diagrams to the clients so as to they can understand them intuitively. Based on the consideration that there are some hard-to-understand contents we insert the instances to our DS0-001 Test Guide to concretely demonstrate the knowledge points and the diagrams to let the clients understand the inner relationship and structure of the DS0-001 knowledge points.

First and foremost, the pass rate among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field, we are waiting for you to be the next beneficiary. Second, you can get our DS0-001 practice test only in 5 to 10 minutes after payment, which enables you to devote yourself to study as soon as possible. Last but not least, you will get the privilege to enjoy free renewal of our DS0-001 Preparation materials during the whole year. All of the staffs in our company wish you early success.

## DS0-001 - CompTIA DataSys+ Certification Exam –Professional Exam Sample Questions

As we all know, in the highly competitive world, we have no choice but improve our software power, such as international DS0-001 certification, working experience, educational background and so forth. Therefore, it is of great significance to have a DS0-001 certificate in hand to highlight your resume, thus helping you achieve success in your workplace. So with our DS0-001 Preparation materials, you are able to pass the exam more easily in the most efficient and productive way and learn how to study with dedication and enthusiasm. There are many advantages of our DS0-001 guide torrent.

## CompTIA DS0-001 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Business Continuity:</b> Finally, this topic covers the importance of disaster recovery techniques. Moreover, the topic explains backup and restore best practices and processes.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Database Fundamentals:</b> This topic covers database structure types, SQL code development and modification based on scenarios, comparison of scripting methods and environments, and the impact of programming on database operations.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Data and Database Security:</b> This topic focuses on data security concepts, governance and regulatory compliance purposes, implementing authentication and authorization policies and best practices. Additionally, the topic discusses database infrastructure security, and understanding types of attacks and their effects on data systems.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>• <b>Database Deployment:</b> In this topic, you'll find discussions on database planning and design aspects. It also focuses on the implementation, testing, and deployment phases of databases.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• <b>Database Management and Maintenance:</b> Here, you'll learn about monitoring and reporting for database management and performance, common database maintenance processes, documentation production, and relevant tools usage. Lastly, the topic focuses on implementing data management tasks.</li> </ul>

## CompTIA DataSys+ Certification Exam Sample Questions (Q39-Q44):

### NEW QUESTION # 39

A group of developers needs access to a database in a development environment, but the database contains sensitive data. Which of the following should the database administrator do before giving the developers access to the environment?

- A. Remove sensitive data from tables
- B. Audit access to tables with sensitive data.
- C. Encrypt connections to the development environment.
- **D. Mask the sensitive data.**

**Answer: D**

Explanation:

The database administrator should mask the sensitive data before giving the developers access to the environment. Data masking is a technique that replaces sensitive data with fictitious but realistic data, such as random numbers or characters, to protect it from unauthorized access or exposure. Data masking preserves the format and structure of the original data, but does not reveal its actual value. This allows developers to work with realistic data without compromising its confidentiality or compliance. The other options are either insufficient or excessive for this scenario. For example, auditing access to tables with sensitive data may help monitor and track who accesses the data, but does not prevent it from being seen; removing sensitive data from tables may compromise the quality or completeness of the data, and may not be feasible if there is a large amount of data; encrypting connections to the development environment may protect the data in transit, but not at rest or in use. Reference: CompTIA DataSys+ Course Outline, Domain 4.0 Data and Database Security, Objective 4.2 Given a scenario, implement security controls for databases.

### NEW QUESTION # 40

A database administrator is updating an organization's ERD. Which of the following is the best option for the database administrator to use?

- **A. UML tool**

- B. HTML editor
- C. Word processor
- D. Spreadsheet

**Answer: A**

Explanation:

The best option for the database administrator to use to update an organization's ERD is a UML tool. A UML tool is a software application that allows users to create, edit, and visualize diagrams using the Unified Modeling Language (UML). UML is a standard language for modeling software systems and their components, such as classes, objects, relationships, behaviors, etc. UML can also be used to create entity relationship diagrams (ERDs), which are graphical representations of the entities (tables), attributes (columns), and relationships (constraints) in a database. A UML tool can help the administrator to update an organization's ERD by providing features such as drag-and-drop, templates, symbols, validation, etc. The other options are either not suitable or not optimal for this task. For example, a word processor is a software application that allows users to create and edit text documents; a spreadsheet is a software application that allows users to organize and manipulate data in rows and columns; an HTML editor is a software application that allows users to create and edit web pages using HyperText Markup Language (HTML). References: CompTIA DataSys+ Course Outline, Domain 2.0 Database Deployment, Objective 2.2 Given a scenario, create database objects using scripting and programming languages.

**NEW QUESTION # 41**

A database administrator is creating a table, which will contain customer data, for an online business. Which of the following SQL syntaxes should the administrator use to create an object?

- A. 

```
CREATE
(
  TABLE CUSTOMER
    ID INT,
    NAME VARCHAR(100),
    AGE INT
)
```
- B. 

```
CREATE TABLE CUSTOMER
(
  ID INT,
  NAME VARCHAR(100),
  AGE INT
)
```
- C. 

```
CREATE TABLE
(
  ID INT,
  NAME VARCHAR(100),
  AGE INT
)
```
- D.

```
CREATE CUSTOMER
(
    ID INT,
    NAME VARCHAR(100),
    AGE INT
)
```

CompTIA

**Answer: D**

Explanation:

The SQL syntax that the administrator should use to create an object is option B. This syntax uses the CREATE TABLE statement to define a new table named customer with four columns: customer\_id, name, email, and phone. Each column has a data type and a constraint, such as NOT NULL or PRIMARY KEY. The other options either have syntax errors, use incorrect keywords, or do not specify the table name or columns correctly. References: CompTIA DataSys+ Course Outline, Domain 1.0 Database Fundamentals, Objective 1.1 Given a scenario, identify and apply database structure types.

#### NEW QUESTION # 42

A database administrator needs to ensure that a newly installed corporate business intelligence application can access the company's transactional data. Which of the following tasks should the administrator perform first?

- A. Set up a nightly FTP data transfer from the database server to the business intelligence application server.
- B. Open a new port on the database server exclusively for the business intelligence application.
- C. Send the business intelligence administrator the approved TNS names file to configure the data mapping.
- **D. Create a new service account exclusively for the business intelligence application.**
- E. Build a separate data warehouse customized to the business intelligence application's specifications.

**Answer: D**

Explanation:

The first task that the administrator should perform is to create a new service account exclusively for the business intelligence application. This will ensure that the application has the appropriate permissions and credentials to access the company's transactional data. The other options are either unnecessary, inefficient, or insecure. For example, building a separate data warehouse would require additional resources and time, setting up a nightly FTP data transfer would expose the data to potential breaches, sending the TNS names file would not guarantee that the application can connect to the database, and opening a new port on the database server would create a vulnerability for attackers. References: CompTIA DataSys+ Course Outline, Domain 2.0 Database Deployment, Objective 2.1 Given a scenario, install and configure database software and tools.

#### NEW QUESTION # 43

Which of the following types of RAID, if configured with the same number and type of disks, would provide the best write performance?

- A. RAID 5
- **B. RAID 10**
- C. RAID 3
- D. RAID 6

**Answer: B**

Explanation:

The type of RAID that would provide the best write performance if configured with the same number and type of disks is RAID 10. RAID 10, or RAID 1+0, is a type of RAID that combines mirroring and striping techniques to provide both redundancy and performance. Mirroring means that data is duplicated across two or more disks to provide fault tolerance and data protection.

Striping means that data is split into blocks and distributed across two or more disks to provide faster access and throughput. RAID 10 requires at least four disks and can tolerate the failure of up to half of the disks without losing data. RAID 10 provides the best write performance among the RAID types because it can write data in parallel to multiple disks without parity calculations or overhead. The other options are either different types of RAID or not related to RAID at all. For example, RAID 3 is a type of RAID that uses striping with a dedicated parity disk to provide redundancy and performance; RAID 5 is a type of RAID that uses striping with distributed parity to provide redundancy and performance; RAID 6 is a type of RAID that uses striping with double distributed parity to provide extra redundancy and performance.

## NEW QUESTION # 44

.....

We have 24/7 Service Online Support services. If you have any questions about our DS0-001 guide torrent, you can email or contact us online. We provide professional staff Remote Assistance to solve any problems you may encounter. You will enjoy the targeted services, the patient attitude, and the sweet voice whenever you use DS0-001 Exam Torrent. 7\*24\*365 Day Online Intimate Service of DS0-001 questions torrent is waiting for you. "Insistently pursuing high quality, everything is for our customers" is our consistent quality principle on our DS0-001 exam questions.
