We provide free trial service before the purchase, the consultation service online after the sale, free update service and the refund service in case the clients fail in the test.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q97-Q102):

NEW QUESTION # 97

What can an administrator use to control what inventory is exposed on specific selling channels?

- A. Selling Channel Flag
- B. Product Filter Status
- C. Selling Channel Status
- D. Product Eligibility Flag

Answer: D

Explanation:

The Product Eligibility Flag is a custom field on the Product object that indicates whether a product is eligible for a specific selling channel. An administrator can use this field to control what inventory is exposed on different channels, such as web, mobile, or store. For example, if a product has the Product Eligibility Flag set to Web Only, it will not be available for other channels. Reference: Order Management Objects, [Product Eligibility Flag]

NEW QUESTION # 98

Which three components can be used to modify the user experience in the Order Summary detail page?

- A. Accordion
- B. Related List-Single
- C. Tabs
- D. Related List - Double

Answer: A,B,C

Explanation:

Three components that can be used to modify the user experience in the Order Summary detail page are:

Tabs. Tabs are a type of component that allow users to switch between different views or subpages on a record page. Tabs can contain other components, such as charts, reports, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize tabs on the Order Summary detail page to give users more options and flexibility.

Accordion. Accordion is a type of component that allow users to expand and collapse sections of a record page. Accordion can contain other components, such as fields, related lists, or custom components, that display different information or functionality related to a record. The administrator can use the Lightning App Builder to add and customize accordion on the Order Summary detail page to give users more control and visibility.

Related List-Single. Related List-Single is a type of component that displays a single related list for a record. A related list is a list of records that are linked to another record by a relationship field, such as lookup or master-detail. The administrator can use the Lightning App Builder to add and customize related list-single on the Order Summary detail page to give users more access and context.

NEW QUESTION # 99

How can an administrator allow an org to publish a change set to another org?

- A. In the target org: Open Deployment Settings, Click Edit next to the source org. Select Allow Inbound Changes and Click Save
- B. In the source org: Open Publish Settings, Select the checkbox next to the environment to publish to and Click Save
- C. In the source org: open Deployment settings, Select the environments to publish to and Move them to the enabled list
- D. In the target org: Open Deployment Settings, Select the environments to allow publishing from and Move them to the Enabled list

Answer: A

NEW QUESTION # 100

Which option is available for an admin to use as middleware to import data to. or export data from Order Management?

- A. Use Data Loader
- B. Write Apex classes to query the database and write to a file
- C. Use the Developer console
- D. Find an application on AppExchange
- E. Use Workbench to access the database

Answer: A

Explanation:

Use Data Loader. Data Loader is a client application that allows administrators to bulk import or export data from Salesforce using CSV files. The administrator can use Data Loader to import data into Order Management objects, such as Order Summary, Order

How can an administrator synchronize licenses from the production org when preparing a sandbox for development?

- Answer: C**

The best way for an administrator to synchronize licenses from the production org when preparing a sandbox for development is to run the Match Production Licenses to Sandbox without a Refresh tool in Setup. This tool allows administrators to match their sandbox licenses with their production licenses without refreshing their sandbox. This way, the administrator can ensure that the sandbox has the same number and type of licenses as the production org, and avoid any license-related issues when developing or testing in the sandbox.
