If you're still learning from the traditional old ways and silently waiting for the test to come, you should be awake and ready to take the exam in a different way. Study our 220-1101 training materials to write "test data" is the most suitable for your choice, after recent years show that the effect of our 220-1101 Guide Torrent has become a secret weapon of the examinee through qualification examination, a lot of the users of our 220-1101 guide torrent can get unexpected results in the examination. Now, I will briefly introduce some details about our 220-1101 guide torrent for your reference.

CompTIA A+ Certification Exam: Core 1 (220-1101) covers a wide range of topics, including hardware, networking, mobile devices, virtualization and cloud computing, and troubleshooting. 220-1101 exam is designed to test the candidate's knowledge and skills in installing, configuring, and maintaining computer hardware and software. 220-1101 Exam also covers the basic principles of

networking, including TCP/IP, DNS, DHCP, and wireless networking. Additionally, the exam covers the latest trends in technology, such as virtualization and cloud computing.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q19-Q24):

NEW QUESTION # 19
A technician is troubleshooting a recently installed printer that is leaving multiple lines and streaks on print jobs. Which of the following should the technician replace first?

- A. Toner
- B. Rollers
- C. Drum
- D. Fuser

Answer: A

Explanation:
Streaks and multiple lines on print jobs are commonly caused by an issue with the toner cartridge, such as a damaged or improperly installed cartridge. The technician should replace the toner first as it is the most likely and simplest component to check.
* Why Not A (Rollers): Rollers primarily handle paper feeding and are less likely to cause streaking.
* Why Not B (Drum): While the drum can cause similar issues, the toner cartridge is easier to replace and should be checked first.
* Why Not D (Fuser): The fuser bonds toner to the paper, but it typically causes smudging rather than streaking.

NEW QUESTION # 20
A technician is troubleshooting poor printing quality on an inkjet printer. The pages have white lines running through the text and graphics. Which of the following is the most likely cause?

- A. Poor quality paper
- B. Faulty ink cartridges
- C. Worn out rollers
- D. Clogged printhead

Answer: D

Explanation:
White lines running through text and graphics in printouts from an inkjet printer are commonly caused by clogged printheads. When the printhead nozzles are clogged, they cannot deliver ink properly to the paper, resulting in white lines where ink should have been deposited. Worn-out rollers, faulty ink cartridges, and poor-quality paper can cause other printing issues but are less likely to cause white lines in the printed output.

NEW QUESTION # 21
A technician is setting up a video-editing workstation and the operating system is already installed on an internal M.2 drive.
The new workstation must meet the following requirements:
. Be able to edit files at the fastest speed
. Allow for disk failure without any downtime
Have 2TB of usable space
. Ensure the most robust fault tolerance
INSTRUCTIONS
Use the drop-down menus to select the appropriate RAID level, drive types, and drive sizes based on the requirements above. For each drive type that is selected, a corresponding drive size must also be selected.

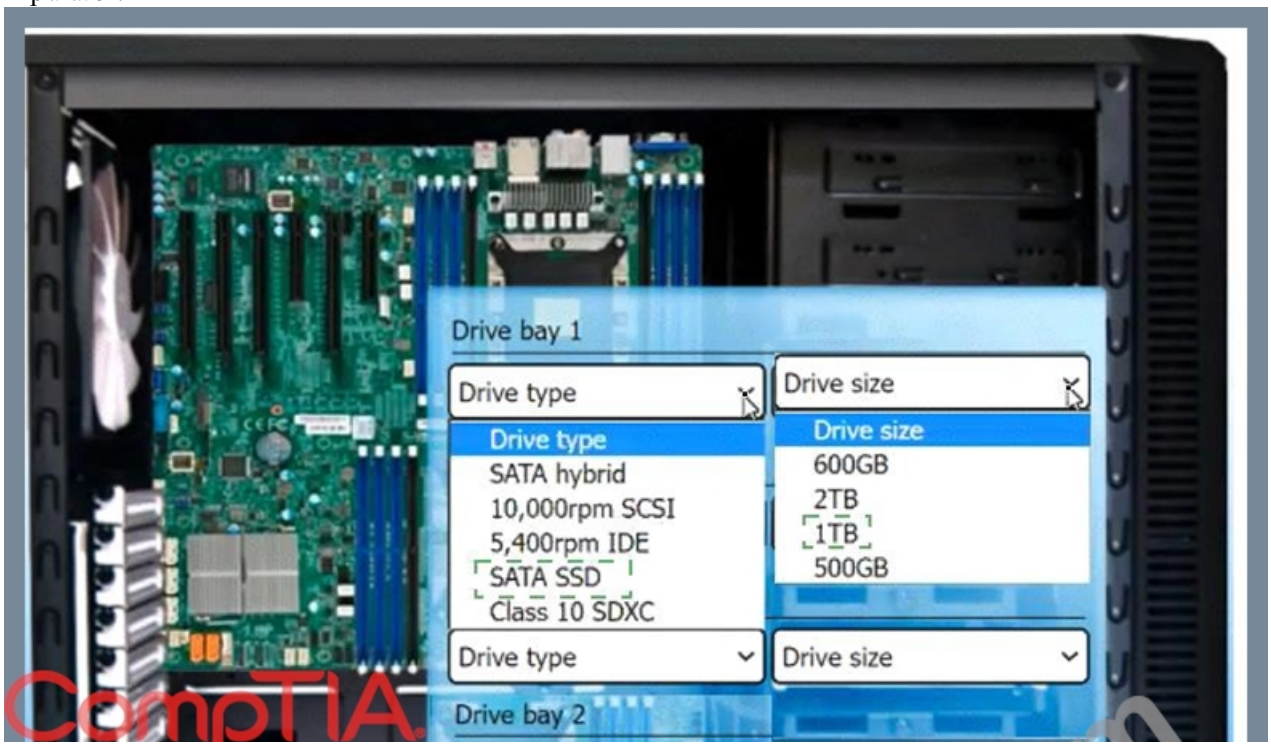
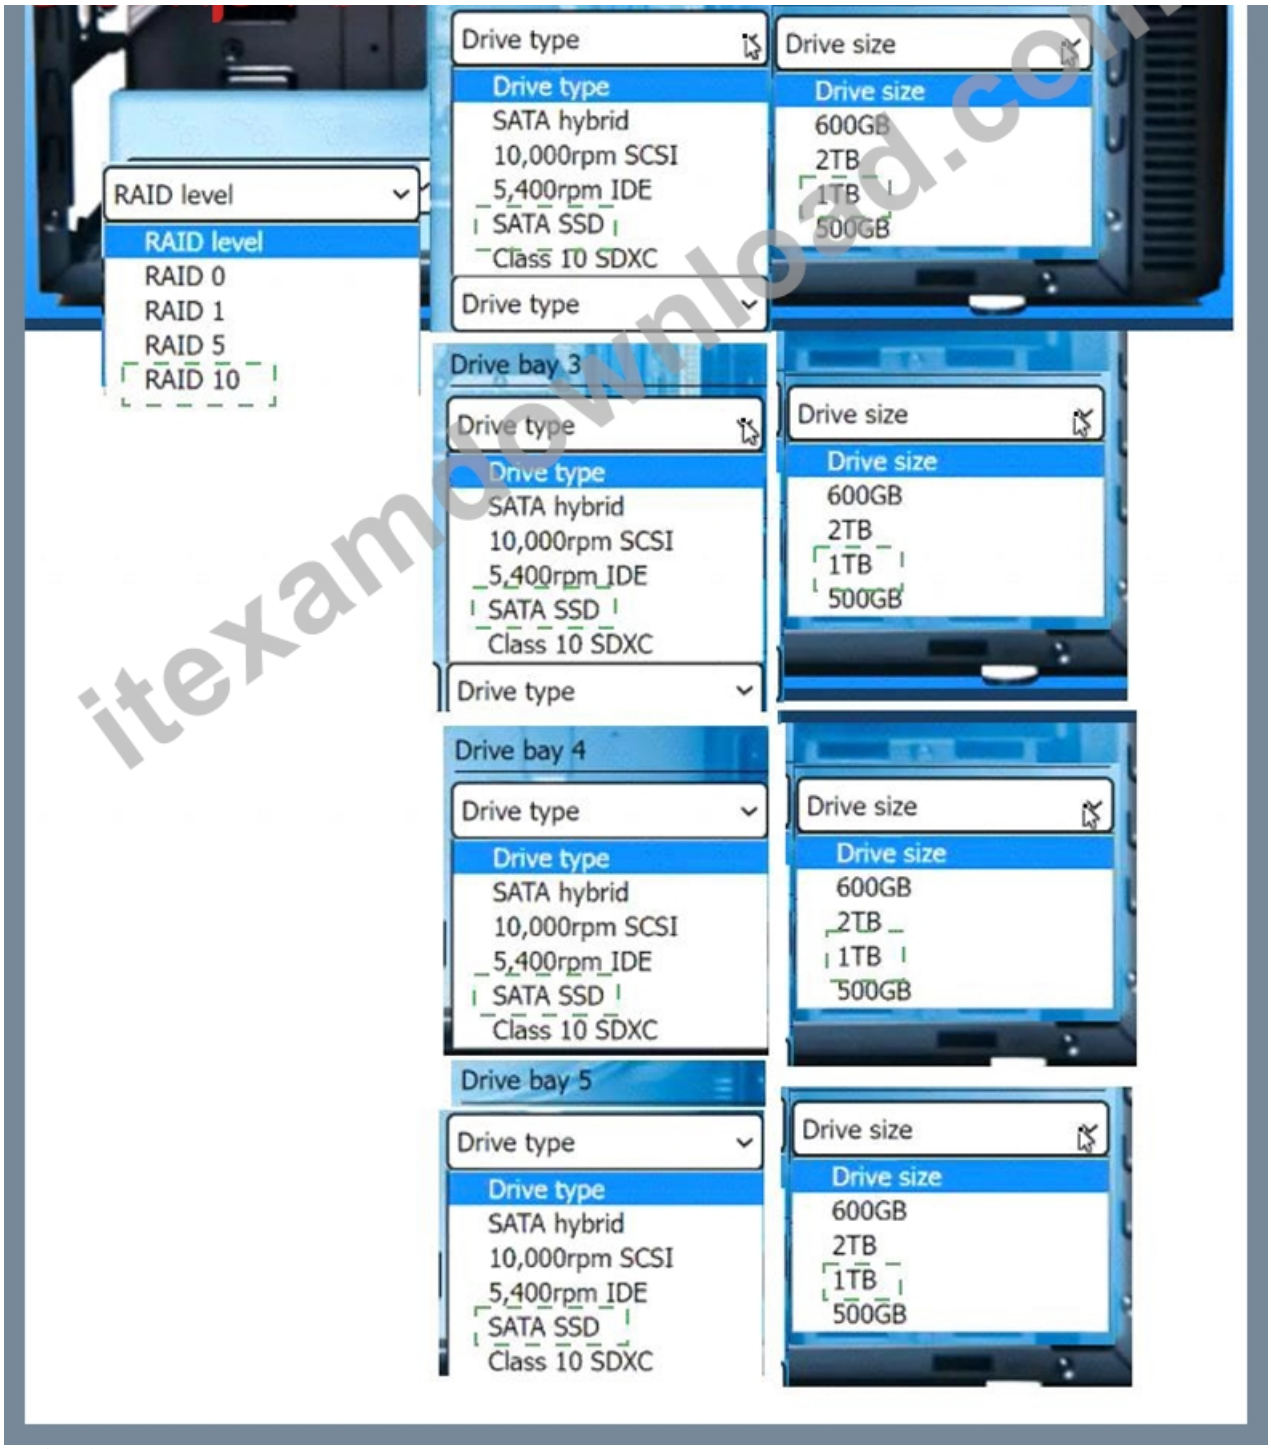
Answer:

Explanation:





Explanation

Based on the requirements, the best option for the video-editing workstation is to use RAID 10 with four SATA SSDs of 1TB each. This configuration will meet the following requirements:

Be able to edit files at the fastest speed: RAID 10 combines the advantages of RAID 0 and RAID 1, which are striping and mirroring, respectively. Striping can increase the data transfer rate by using multiple disks in parallel, while mirroring can provide redundancy and reliability by duplicating the data on another set of disks. SATA SSDs are also faster than HDDs or SSHDs, as they use flash memory instead of spinning disks, and they can offer lower latency, higher IOPS, and less noise and heat.

Allow for disk failure without any downtime: RAID 10 can withstand up to two disk failures, as long as they are not in the same mirrored pair. If one disk fails, the data can be read from or written to the other disk in the same pair, without affecting the performance or availability of the array. The failed disk can be replaced and rebuilt without interrupting the operation of the workstation.

Have 2TB of usable space: RAID 10 uses half of the total disk capacity for mirroring, so the usable space is equal to the size of two disks. By using four SATA SSDs of 1TB each, the total disk capacity is

4TB, and the usable space is 2TB, which meets the requirement.

Ensure the most robust fault tolerance: RAID 10 offers the highest level of fault tolerance among the standard RAID levels, as it can survive multiple disk failures and provide fast recovery. RAID 10 also has a low overhead, as it does not use parity or checksums,

which can slow down the write performance or increase the complexity of the array.
Therefore, the technician should select the following options from the drop-down menus:
RAID level: RAID 10
Drive type 1: SATA SSD
Drive size 1: 1TB
Drive type 2: SATA SSD
Drive size 2: 1TB
Drive type 3: SATA SSD
Drive size 3: 1TB
Drive type 4: SATA SSD
Drive size 4: 1TB
Drive type 5: SATA SSD
Drive size 5: 1TB

NEW QUESTION # 22
A technician replaces a laptop hard drive with an M.2 SSD. When the technician reboots the laptop, the laptop does not detect the SSD. Which of the following should the technician configure for the system?

- A. TPM
- B. HSM
- C. UEFI settings
- D. Boot options

Answer: C

Explanation:
UEFI stands for Unified Extensible Firmware Interface, and it is a type of firmware that controls the boot process of a computer. UEFI settings allow the technician to configure various aspects of the boot process, such as the boot order, the boot mode, and the security options. If the technician replaces a laptop hard drive with an M.2 SSD, they may need to adjust the UEFI settings to enable the system to detect and boot from the new drive.

NEW QUESTION # 23
A customer reports that a text-only document prints with unrecognizable characters. The print preview correctly displays the document. Which of the following is the most likely cause of the issue?

- A. Bad toner cartridge
- B. Incorrect driver
- C. Outdated firmware
- D. Corrupted document file

Answer: B
