## **Newest Sample Associate-Google-Workspace-Administrator Questions | Easy To Study and Pass Exam at first attempt & Well-Prepared Associate-Google-Workspace-Administrator: Associate Google Workspace Administrator**

You can free download part of Prep4sures's practice questions and answers about Google certification Associate-Google-Workspace-Administrator exam online, as an attempt to test our quality. As long as you choose to purchase Prep4sures's products, we will do our best to help you pass Google Certification Associate-Google-Workspace-Administrator Exam disposably.

### **Google Associate Google Workspace Administrator Sample Questions (Q53-Q58):**

#### **NEW QUESTION # 53**

Users at your company are reporting that they are not receiving some emails in their corporate Gmail account. You have checked the Google Workspace Status Dashboard and you found no service disruptions. You need to identify the root cause of the problem

and resolve the mail delivery issues. What should you do? (Choose two.)

- A. Use Email Log Search (ELS) to identify specific delivery failures.
- B. Verify whether the organization's Mail Exchange (MX) records are correctly configured.
- C. Check the senders' IP addresses in the inbound mail gateway.
- D. Investigate the Gmail log events for error messages or unusual patterns.
- E. Check the users' spam folders to determine whether emails are being misdirected.

**Answer: A,B**

Explanation:

Use Email Log Search (ELS): ELS allows you to trace email delivery and identify issues, such as undelivered or bounced messages. This is an essential tool for identifying the root cause of mail delivery issues.

Verify whether the organization's Mail Exchange (MX) records are correctly configured: Incorrect MX records could prevent emails from being delivered to the organization's Gmail accounts. It's important to verify that these records are set up properly to ensure smooth email delivery.

#### NEW QUESTION # 54

Your company has recently migrated from an on-premises email solution to Google Workspace.

You have successfully added and verified the new primary domain. However, you also want to continue receiving emails sent to your former on-premises email server for a transitional period.

You need to ensure that emails sent to your former domain are still delivered to your on-premises server, even though your primary email system is now Google Workspace. What should you do?

- A. Adjust the TTL (Time-to-Live) for the former domain to ensure a smooth transition.
- B. Add the former domain as a secondary domain in your Google Workspace settings and verify the domain.
- C. Add the former domain as a domain alias for the primary domain.
- D. Configure MX records for the former domain to point to your on-premises email servers.

**Answer: D**

Explanation:

To ensure that emails sent to your former domain are still delivered to your on-premises server during a transitional period after migrating your primary email to Google Workspace, you need to configure the MX (Mail Exchanger) records for the former domain to point to your on-premises email servers.

#### NEW QUESTION # 55

Your organization needs an approval application for purchases where a user can enter information on the purchase required and then submit it for management approval. You need to suggest a solution to create the application that must be available on both the web and mobile devices. Your organization does not have software developers or the budget to hire a third party.

What should you do?

- A. Suggest that the organization continue to approve requests manually until budget is available to use a third-party application provider.
- B. Suggest the organization use AppSheet to create the application.
- C. Suggest that the organization develop an application internally with a database, a backend service for data retrieval, and a frontend service for the application's user interface.
- D. Suggest that the organization use AppScript to create forms linked to a Google Sheet to store the purchase data.

**Answer: B**

Explanation:

AppSheet is a no-code platform that allows users to create custom applications without the need for software development skills. It is capable of building applications that can be used both on the web and mobile devices. AppSheet would allow the organization to create the approval application efficiently, meeting the requirements of the purchase process, and would be a cost-effective solution that does not require hiring developers or using a third-party application provider.

#### NEW QUESTION # 56

Your organization acquired a small agency with only five users. You need to create user accounts for these new employees. Agency users must have their original email address. You have added the agency's domain as a secondary domain. What should you do?

- A. Use the Directory API to automatically create the user accounts.
- B. Use Google Cloud Directory Sync (GCDS) to sync users from an existing directory.
- **C. Manually create users from the Admin console. When creating the user account, choose the agency domain to be used for the email address.**
- D. Bulk upload all users using a CSV file.

**Answer: C**

Explanation:

The key information here is "only five users" and "Agency users must have their original email address. You have added the agency's domain as a secondary domain." For a small number of users (five), manually creating them in the Admin console is the most straightforward and least complex method. When creating a new user, the Admin console allows you to select the domain for their primary email address from any secondary domains you have added to your Google Workspace account.

#### **NEW QUESTION # 57**

Your organization has hired temporary employees to work on a sensitive internal project. You need to ensure that the sensitive project data in Google Drive is limited to only internal domain sharing. You do not want to be overly restrictive. What should you do?

- A. Restrict the Drive sharing options for the domain to allowlisted domains.
- **B. Configure the Drive sharing options for the domain to internal only.**
- C. Create a Drive DLP rule, and use the sensitive internal Project name as the detector.
- D. Turn off the Drive sharing setting from the Team dashboard.

**Answer: B**

Explanation:

By configuring the Drive sharing options for your domain to "internal only," you ensure that sensitive project data is restricted to your organization's internal users. This prevents any external sharing while allowing your team members to collaborate freely within the organization. It strikes the right balance between maintaining security and avoiding unnecessary restrictions on collaboration.

#### **NEW QUESTION # 58**

.....

Are you ready to gain all these Associate-Google-Workspace-Administrator certification benefits? Looking for a simple, smart, and quick way to pass the challenging Associate-Google-Workspace-Administrator exam?
