Salesforce Analytics-Arch-201 Prüfungsunterlagen von PrüfungFrage können Ihnen helfen, die Analytics-Arch-201 Prüfung zu bestehen und die Kenntnisse über Salesforce Analytics-Arch-201 Prüfungen zu lernen. Die PrüfungFrage Dumps integrieren alle Kenntnisse in den Unterlagen, die vielleicht in der aktuellen Prüfungen vorhanden sind. Damit können Sie Ihre Fähigkeit verbessern und die in dem Arbeitsleben gut verwenden. Die Salesforce Analytics-Arch-201 Dumps von PrüfungFrage sind unbedingt die beste Wahl für die Prüfungsvorbereitung und die Verbesserung der Fähigkeit. Sie können glauben, dass wir PrüfungFrage gute Aussichten für Sie anbieten können.

Manche würden fragen, wo ist der Erfolg? Ich sage Ihnen, Erfolg ist bei PrüfungFrage. Wenn Sie PrüfungFrage wählen, können Sie Erfolg erzielen. Die Schulungsunterlagen zur Salesforce Analytics-Arch-201 Zertifizierungsprüfung von PrüfungFrage helfen allen Kandidaten, die Salesforce Analytics-Arch-201 Prüfung zu bestehen. Die Feedbacks von den Kandidaten zeigen, dass die Schulungsunterlagen bei den Kandidaten große Resonanz finden und einen guten Ruf genießen. Das heißt, wenn Sie die Schulungsunterlagen zur Salesforce Analytics-Arch-201 Zertifizierungsprüfung von PrüfungFrage wählen, kommt der Erfolg auf Sie zu.

Analytics-Arch-201 Online Prüfungen, Analytics-Arch-201 Prüfungsübungen

Die Fragenkataloge zur Salesforce Analytics-Arch-201 Prüfung von PrüfungFrage sind die besten im Vergleich zu den anderen Materialien. Wenn Sie Fragenkataloge suchen, wählen Sie doch die Fragenkataloge zur Salesforce Analytics-Arch-201 Prüfung von

PrüfungFrage. Und Sie würden viel davonprofitieren. Sonst würden Sie bereuen.

Salesforce Analytics-Arch-201 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Design a Tableau Infrastructure: This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.
Thema 2	• Monitor and Maintain a Tableau Deployment: This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.
Thema 3	• Deploy Tableau Server: This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.

Salesforce Certified Tableau Architect Analytics-Arch-201 Prüfungsfragen mit Lösungen (Q135-Q140):

135. Frage

You identify that a particular Tableau data source is causing slow query performance. What should be your initial approach to resolving this issue?

- A. Increasing the frequency of extract refreshes to ensure more up-to-date data
- B. Restructuring the underlying database to improve its performance
- **C. Optimizing the data source by reviewing and refining complex calculations and data relationships**
- D. Replacing the data source with a pre-aggregated summary data source

Antwort: C

Begründung:

Optimizing the data source by reviewing and refining complex calculations and data relationships The initial approach to resolving slow query performance due to a data source should be to optimize the data source itself. This includes reviewing complex calculations, data relationships, and query structures within the data source to identify and address inefficiencies. This optimization can significantly improve query performance without needing more drastic measures. Option A is incorrect as restructuring the underlying database is a more extensive and complex solution that should be considered only if data source optimization does not suffice. Option C is incorrect because replacing the data source with a pre-aggregated summary might not be feasible or appropriate for all analysis needs. Option D is incorrect as increasing extract refresh frequency does not directly address the root cause of slow query performance in the data source itself.

136. Frage

You are integrating Tableau Server with an external LDAP server for authentication, but the connection fails. What is the primary action to take in resolving this integration issue on a Windows system?

- **A. Ensuring that the Tableau Server has the correct LDAP server address, port, and credentials configured**
- B. Upgrading the network infrastructure to facilitate a faster connection to the LDAP server
- C. Reconfiguring the LDAP server to use a different authentication protocol
- D. Installing additional security software on the Tableau Server to enhance LDAP communication

Antwort: A

Begründung:

Ensuring that the Tableau Server has the correct LDAP server address, port, and credentials configured The primary action to resolve integration issues with an external LDAP server is to ensure that Tableau Server has the correct LDAP server address, port, and credentials configured. Incorrect configurations can lead to failed connections, so verifying these settings is crucial for successful LDAP integration. Option A is incorrect because changing the LDAP server's authentication protocol is an extensive measure and should be considered only after verifying the current configuration. Option C is incorrect as upgrading network infrastructure, while beneficial for overall performance, is not the first step in addressing specific LDAP connectivity issues. Option D is incorrect because installing additional security software does not directly address potential configuration issues with LDAP integration.

137. Frage

During the installation of Tableau Server on Linux, what step must be taken to ensure a smooth installation process using either CLI or the Installation Wizard?

- A. Ensuring that the Linux server has a minimum of 16GB of RAM
- B. Temporarily disabling the SELinux policy on the Linux server
- C. Running a pre-installation script to automatically configure all server dependencies
- **D. Creating a dedicated Tableau user account and group on the Linux system**

Antwort: D

Begründung:

Creating a dedicated Tableau user account and group on the Linux system A critical step in the Tableau Server installation process on Linux is creating a dedicated Tableau user account and group. This account is used to run Tableau Server processes and helps in managing permissions and ensuring that Tableau Server operates securely and efficiently within the Linux environment. Option A is incorrect because while having sufficient RAM is important, the specific requirement may vary and is not a direct step in the installation process. Option B is incorrect as running a pre-installation script is not typically a standard step in the Tableau Server installation process. Option D is incorrect because disabling SELinux is not recommended for security reasons and is not a required step for the Tableau Server installation.

138. Frage

A company using Tableau Cloud experiences intermittent performance issues, particularly during peak usage times. What should be the first step in troubleshooting these issues?

- A. Increasing the number of Tableau Cloud instances without analyzing usage patterns
- B. Immediately upgrading the company's internet connection
- C. Reducing the number of dashboards available to users to decrease load
- **D. Analyzing user access patterns and resource utilization to identify bottlenecks**

Antwort: D

Begründung:

Analyzing user access patterns and resource utilization to identify bottlenecks This approach involves a methodical analysis to understand the root cause of performance issues, focusing on how and when the resources are being utilized. Option A is incorrect because increasing cloud instances without understanding the issue may not resolve the problem and could lead to unnecessary costs. Option C is incorrect as upgrading the internet connection might not address the underlying issue within Tableau Cloud's configuration. Option D is incorrect because reducing the number of dashboards does not directly address the issue of performance during peak times and might hinder business operations.

139. Frage

In the process of installing Tableau Server on a Windows system using the Command Line Interface (CLI), what is a critical consideration to ensure the installation proceeds smoothly?

- A. Ensuring all command line installation commands are executed with elevated (administrator) privileges
- B. Creating a new Windows user account specifically for the installation of Tableau Server
- C. Pre-installing all necessary database drivers on the Windows system
- D. Temporarily disabling User Account Control (UAC) on the Windows system

Antwort: A

Begründung:

Ensuring all command line installation commands are executed with elevated (administrator) privileges For a smooth installation of Tableau Server on Windows using the CLI, it is essential to ensure that all installation commands are executed with elevated (administrator) privileges. Running commands with administrator rights ensures that the installer has sufficient access to system resources and permissions to install and configure Tableau Server. Option A is incorrect because completely disabling UAC is not recommended and can expose the system to security risks. Option C is incorrect as creating a new Windows user account specifically for the installation is not a standard requirement for installing Tableau Server. Option D is incorrect because pre-installing database drivers, while important for connectivity, is not a direct part of the Tableau Server installation process.

140. Frage

.....

Wir PrüfungFrage bieten Ihnen die Salesforce Analytics-Arch-201 Dumps mit der besten Qualität und die niedrigsten Kosten. Und es ist wichtiger, dass PrüfungFrage Ihnen den besten Service bieten. Solange Sie die Prüfungsunterlagen kaufen, können Sie sofort diese Unterlagen bekommen. Und Wir PrüfungFrage haben die Prüfungsunterlagen, die Sie am meisten wünschen und auch sehr geeignet. Außerdem können Sie nach dem Kauf einjährigen kostenlosen Aktualisierungsservice bekommen. Innerhalb einem Jahr können Sie die neueste Version besitzen, solange Sie Ihre Salesforce Analytics-Arch-201 Prüfungsunterlagen aktualisieren wollen. Wir PrüfungFrage bemühen uns um Ihre Interesse und Bequemlichkeit.
