NEW QUESTION # 83

Refer to the exhibit.

A customer has SSO on its AEM Author environment using Adobe IMS, which is integrated with the customer's IDP using SAML. The customer plans to roll out a new secured website on AEM where SSO authentication is required for end users. The end user accounts are also managed in the customer's existing IDP.

How should the Architect set up the authentication for the website?

- A. Set up CUG and use User Synchronisation from Author to Publisher
- **B. Integrate AEM Publisher using SAML directly with the IDP**
- C. Integrate AEM Publisher using oAuth with Adobe IMS
- D. Integrate AEM Publisher using SAML with Adobe IMS

Answer: B

Explanation:

SAML is a common and standard SSO handler that allows a user to access multiple systems after providing authentication credentials once. AEM ships with a SAML 2.0 Authentication Handler that supports signing and encryption of messages, automatic creation of users, and syncing groups to existing ones in AEM3. By integrating AEM Publisher using SAML directly with the IDP, the Architect can leverage the existing user accounts and authentication mechanism for the end users of the secured website.

NEW QUESTION # 84

A client using AEM 6.5 on-premise is experiencing an unsustainable repository growth of 100Gb a day. After investigation, an Architect finds out that the DAM is causing this issue. The client also complains about stale content reported by site visitors happening randomly in pages where article-related components are present.

How should the Architect address these issues?

- A. Split WCM and DAM in separate instances, set up Connected Assets, and implement a workflow to purge all pages affected by an article change in Dispatcher
- B. Leverage AEM Adaptive Image Servlet, cache image variations in Dispatcher, and reimplement article-related components to use AJAX to load the content
- C. Leverage AEM Adaptive Image Servlet cache image variations in Dispatcher, and implement a cache TTL in Dispatcher
- **D. Split WCM and DAM in separate instances, set up Connected Assets, and re-implement article-related components to use AJAX to load the content**
