**Answer: B**

### NEW QUESTION # 61

An industry customer purchased several Huawei OceanStor Pacific series scale-out storage devices for service deployment, and an engineer configured the SmartMigration feature on the storage devices. Now the engineer wants to change the split mode and

migration rate of a SmartMigration task due to changes in service requirements. Which of the following SmartMigration running statuses does not allow the engineer to perform the change?

- A. Migrating
- B. Interrupted
- **C. Faulty**
- D. Paused

**Answer: C**

Explanation:

The SmartMigration feature in Huawei OceanStor Pacific enables data migration between storage resources.

The \*HCIP-Storage V5.5 Training Material (Module 4: Storage Design and Implementation)\* explains: "The split mode and migration rate of a SmartMigration task can be modified only when the task is in certain statuses, such as Interrupted, Paused, or Faulty. When the task is in the Migrating status, changes to split mode or migration rate are not allowed, as the system is actively transferring data." This is because modifying parameters during active migration could disrupt the process or cause data inconsistency. Let's evaluate:

- Option A: Interrupted allows changes, as the task is stopped.
- Option B: Paused allows changes, as the task is temporarily halted.
- Option C: Faulty allows changes, as the task is not actively running.
- Option D: Migrating does not allow changes, as the task is in progress.

Thus, option D is the status that prevents changes.
