Latest Mule-Dev-201 Test Pdf, Mule-Dev-201 Exam Forum

PassTestking is here to provide you with Mule-Dev-201 exam dumps. These Salesforce Mule-Dev-201 practice test materials will help you secure the Mule-Dev-201 credential on the first attempt. PassTestking resolves every problem of the test aspirants with reliable Salesforce Mule-Dev-201 Practice Test material. This Mule-Dev-201 practice exam imitates the Salesforce Mule-Dev-201 real exam pattern. Thus, it helps you kill Salesforce Mule-Dev-201 exam anxiety.

Salesforce Certified MuleSoft Developer Sample Questions (Q43-Q48):

NEW QUESTION # 43
Refer to the exhibits.
What
is the response when a client submits a request to http://localhost:8081?

- A. Validation error
- B. After

- C. Before
- D. null

Answer: A

Explanation:

Here's specifically what is happening here:

1) Payload is successfully set to "Before"

2) Is null validation is used which will pass the message only if payload is null. In this case as payload is not null, it creates an Error Object. Flow execution stops

#[error.description] = "Validation error"

3)Because no error handler is defined, the Mule default error handler handles the error

4) "Validation error" is the error message returned to the requestor in the body of the HTTP request with HTTP Status Code: 500

NEW QUESTION # 44

Which out of below is not an asset?

- A. Template
- B. Connector
- C. Exchange
- D. Example

Answer: C

Explanation:

Exchange is the odd man out here. Rest all are type of asset

Graphical user interface, application Description automatically generated

NEW QUESTION # 45

Refer to the exhibits.

What DataWeave expression transforms the conductorIds array to the XML output?

- A. 1. 1. {(trains:2. 2.3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8.)}
- B. 1. 1. trains:2. 2.conductorIds map ((engId, index) ->3. 3. train: {4. 4. engineerId: engId5. 5. }6. 6.)
- C. 1. 1. trains:2. 2. {(3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8.)}
- D. 1. 1. { trains:2. 2.3. 3. conductorIds map ((engId, index) ->4. 4. train: {5. 5. engineerId: engId6. 6. }7. 7.)8. 8. }

Answer: C

Explanation:

Points toremember:

* XML must have a root element.

* XML only allows one root element

* To avoid multiple root issues, you must create a root element for the XML output, whenever we transform output

* When mapping array elements (JSON or JAVA) to XML, wrap the mapoperations in {(..)}

- { } are defining the object

( ) are transforming each element in the array as a key/value pair

* The transformation to XML would fail if the above mentioned considerations were not taken into account.

* Thus the transformation scriptdeclares a root element as trains and wraps the data in "{( )}".

Whenever you see such type of question, always look out for root element followed by {( )} wrapping map.

I call this a "Wrap The Map" scenario. Hope it would help you remember !

NEW QUESTION # 46

What is the correct syntax for a Logger component to output a message with the contents of a 3SON Object payload?

- A. #["The payload is: " ++ payload]
- B. The payload is: #[payload]
- C. The payload is: $(payload)
- D. #["The payload is: " + payload]

Answer: A

Explanation:
Option 3 is the only corect answer as it concatenates payload with String.
Below option wont work.
#["The payload is " ++ payload]
Concatenation function expects both arguments to be string. As the question sayspayload is json object , this will throw error while running it. You can try this in Anypoint Studio and you will get the same result which I mentioned.
hence correct answer is
The payload is: #[payload]

NEW QUESTION # 47

Refer to the exhibit.
What DataWeave expression transforms the conductorlds arrayto the XML output?

- A. □
- B. □
- C. □
- D. □

Answer: A
