## Hot Latest CloudSec-Pro Test Objectives | High Pass-Rate Palo Alto Networks CloudSec-Pro Exam Pattern: Palo Alto Networks Cloud Security Professional

These formats are Palo Alto Networks CloudSec-Pro PDF dumps, web-based practice test software, and desktop practice test

software. All these three Palo Alto Networks Cloud Security Professional (CloudSec-Pro) exam questions contain the real, valid, and updated Palo Alto Networks Exams that will provide you with everything that you need to learn, prepare and pass the challenging but career advancement CloudSec-Pro Certification Exam with good scores.

## Palo Alto Networks Cloud Security Professional Sample Questions (Q50-Q55):

### NEW QUESTION # 50

A security team notices a number of anomalies under Monitor > Events. The incident response team works with the developers to determine that these anomalies are false positives.

What will be the effect if the security team chooses to Relearn on this image?

- A. The model is retained, and any new behavior observed during the new learning period will be added to the existing model.
- B. The model is deleted, and Defender will relearn for 24 hours.
- C. The anomalies detected will automatically be added to the model.
- D. The model is deleted and returns to the initial learning state.

**Answer: A**

Explanation:

In Prisma Cloud, when anomalies are detected and the security team chooses to Relearn on a specific image, the existing behavioral model for that image is not deleted. Instead, the system retains the model and enters a new learning period, during which it observes the behavior of the container based on the image. If new behaviors are observed during this period, they are added to the existing model, thereby refining and updating the model to reflect the current operational profile of the container. This approach allows for dynamic adaptation to changes in container behavior while preserving the valuable insights and patterns already established in the model. The Relearn function is part of Prisma Cloud's adaptive capabilities, enabling it to maintain accurate and up-to-date behavioral models that reflect the evolving nature of containerized applications.

### NEW QUESTION # 51

Which data security default policy is able to scan for vulnerabilities?

- A. Objects containing Malware
- B. Objects containing Exploits
- C. Objects containing Vulnerabilities
- D. Objects containing Threats

**Answer: A**

Explanation:

The data security default policy capable of scanning for vulnerabilities is "Objects containing Malware". In cloud security, malware scanning is an essential feature of CSPM tools that allows for the identification of malicious software within objects stored in the cloud. A policy that scans for objects containing malware ensures that any files or code bases in the cloud environment are examined for potential threats, protecting the cloud resources from being compromised.

### NEW QUESTION # 52

What is a benefit of the Cloud Discovery feature?

- A. It enables engineers to continuously monitor all accounts and report on the services that are unprotected.
- B. It does not require any specific permissions to be granted before use.
- C. It helps engineers find all cloud-native services being used only on AWS.
- D. It offers coverage for serverless functions on AWS only.

**Answer: A**

Explanation:

The Cloud Discovery feature in Prisma Cloud allows engineers to monitor accounts continuously and report on cloud-native services that are unprotected across different cloud service providers. This feature requires specific permissions to access and assess the cloud environment's configuration and security posture. Thus, the correct answer is A: It enables engineers to continuously monitor all accounts and report on the services that are unprotected.

### NEW QUESTION # 53

Which categories does the Adoption Advisor use to measure adoption progress for Cloud Security Posture Management?

- A. Network, Anomaly, and Audit Event
- **B. Visibility, Compliance, Governance, and Threat Detection and Response**
- C. Foundations, Advanced, and Optimize
- D. Visibility, Security, and Compliance

**Answer: B**

Explanation:

The Adoption Advisor uses four categories to measure adoption progress for Cloud Security Posture Management: Visibility, Compliance, Governance, and Threat Detection and Response. Visibility helps to identify the resources in the environment and to ensure that security controls are in place. Compliance helps to ensure that the environment is meeting regulatory and industry standards. Governance helps to ensure that the environment is secure and managed according to policy. Threat Detection and Response helps to detect and respond to threats quickly and effectively.

The Adoption Advisor in Prisma Cloud uses categories such as Visibility, Compliance, Governance, and Threat Detection and Response to measure adoption progress for Cloud Security Posture Management (CSPM). These categories represent key areas of focus for effectively managing and securing cloud environments. Visibility refers to the ability to see and understand all cloud resources and their configurations. Compliance involves ensuring that cloud resources comply with regulatory standards and best practices. Governance encompasses the policies and procedures that control cloud resource usage and security. Threat Detection and Response involves identifying and mitigating security threats to the cloud environment. By measuring adoption progress across these categories, organizations can assess how well they are utilizing CSPM capabilities to secure their cloud environments.

### NEW QUESTION # 54

Which API calls can scan an image named myimage: latest with twistcli and then retrieve the results from Console?

- A. \$ twistcli images scan --address --user --password \myimage: latest
- **B. \$ twistcli images scan --address --user --password --details \myimage: latest**
- C. \$ twistcli images scan --address --user --password --console \myimage: latest
- D. \$ twistcli images scan --address --user --password --verbose \myimage: latest

**Answer: B**

Explanation:

You can have twistcli generate a detailed report for each scan. The following procedure shows you how to scan an image with twistcli, and then retrieve the results from Console.
