BTW, DOWNLOAD part of DumpsActual SPLK-1004 dumps from Cloud Storage: [https://drive.google.com/open?id=1wxq\\_dFL\\_dUP\\_mC44ngOyDsY7l099y\\_v](https://drive.google.com/open?id=1wxq_dFL_dUP_mC44ngOyDsY7l099y_v)

For years our team has built a top-ranking brand with mighty and main which bears a high reputation both at home and abroad. The sales volume of the SPLK-1004 study materials we sell has far exceeded the same industry and favorable rate about our products is approximate to 100%. Why the clients speak highly of our SPLK-1004 Study Materials? Our dedicated service, high quality and passing rate and diversified functions contribute greatly to the high prestige of our products.

Splunk SPLK-1004 (Splunk Core Certified Advanced Power User) Exam is designed to test the knowledge and skills of individuals who are experienced users of the Splunk platform. SPLK-1004 exam is intended for professionals who have already passed the Splunk Core Certified User Exam (SPLK-1001) and have a deep understanding of the features and functions of Splunk. The SPLK-1004 Exam focuses on advanced search and reporting techniques, dashboard creation, and data management within the Splunk platform.

## Exam SPLK-1004 Actual Tests - New SPLK-1004 Exam Simulator

The competition in today's society is the competition of talents. Can you survive and be invincible in a highly competitive society? Can you gain a foothold in such a complex society? If your answer is "no", that is because your ability is not strong enough. Our SPLK-1004 test braindumps can help you improve your abilities. Once you choose our learning materials, your dream that you have always been eager to get Splunk certification which can prove your abilities will realized. You will have more competitive advantages than others to find a job that is decent. We are convinced that our SPLK-1004 Exam Questions can help you gain the desired social status and thus embrace success.

To prepare for the Splunk SPLK-1004 Exam, candidates must have a strong foundation in Splunk Core and be familiar with advanced search commands, data models, and visualization techniques. Splunk offers a range of training courses and resources to help candidates prepare for the exam, including instructor-led training, self-paced eLearning, and certification study guides.

## Splunk Core Certified Advanced Power User Sample Questions (Q119-Q124):

### NEW QUESTION # 119

When working with an accelerated data model `acc_datmodel` and an unaccelerated data model `unacc_datmodel`, what `tstats` query could be used to search one of these data models?

- A. | `tstats count where datamodel=acc_datmodel summariesonly=false`
- B. | `tstats count from datamodel=unacc_datmodel summariesonly=true`
- C. | `tstats count from datamodel=acc_datmodel summariesonly=false`
- D. | `tstats count where index=datamodel by index, datamodel`

Answer: C

Explanation:

The `tstats` command in Splunk is optimized for performance and is typically used with accelerated data models. The `summariesonly`

parameter determines whether the search should use only the summarized (accelerated) data or fall back to raw data if necessary.  
\* Setting `summariesonly=false` allows the search to use both summarized and raw data, making it suitable for both accelerated and unaccelerated data models.

\* Setting `summariesonly=true` restricts the search to only summarized data, which would result in no data returned if the data model is not accelerated.

Therefore, to search an accelerated data model and allow fallback to raw data if needed, the correct query is:

```
| tstats count from datamodel=acc_datmodel summariesonly=false
```

tstats - Splunk Documentation

### NEW QUESTION # 120

Which of these generates a summary index containing a count of events by productId?

- A. `sistats summary_index by productId`
- B. `| sistats count by productId`
- C. `| stats sum(productId)`
- D. `| stats count by productId`

**Answer: D**

Explanation:

The `stats count by productId` command counts the number of events for each unique productId, making it the correct command for generating a summary index based on event counts.

### NEW QUESTION # 121

Which of the following functions' primary purpose is to convert epoch time to a string format?

- A. `tostring`
- B. `tonumber`
- C. `strptime`
- D. `strftime`

**Answer: D**

Explanation:

The `strftime` function in Splunk is used to convert epoch time (also known as POSIX time or Unix time, which is a system for describing points in time as the number of seconds elapsed since January 1, 1970) into a human-readable string format. This function is particularly useful when formatting timestamps in search results or when creating more readable time representations in dashboards and reports. The `strftime` function takes an epoch time value and a format string as arguments and returns the formatted time as a string according to the specified format. The other options (`tostring`, `strptime`, and `tonumber`) serve different purposes: `tostring` converts values to strings, `strptime` converts string representations of time into epoch format, and `tonumber` converts values to numbers.

### NEW QUESTION # 122

Which search generates a field with a value of "hello"?

- A. `| makeresults | eval field="hello"`
- B. `| makeresults | eval field=make{"hello"}`
- C. `| makeresults field="hello"`
- D. `| makeresults | fields="hello"`

**Answer: A**

Explanation:

The correct search to generate a field with a value of "hello" is:

Copy

1

```
| makeresults | eval field="hello"
```

Here's why this works:

\* **makeresults**: This command creates a single event with no fields.

\* **eval**: The **eval** command is used to create or modify fields. In this case, it creates a new field named **field** and assigns it the value "hello".

Example:

```
| makeresults
| eval field="hello"
```

This will produce a result like:

```
_time field
-----
<current_timestamp> hello
```

### NEW QUESTION # 123

Which of the following will best optimize dashboard performance?

- A. Use base searches.
- B. Use scheduled reports.
- **C. Use accelerated data models.**
- D. Use inline searches.

**Answer: C**

Explanation:

Accelerated data models in Splunk create summaries of data that can be queried more efficiently, significantly improving dashboard performance. By precomputing and storing results, dashboards can retrieve data faster, reducing load times and resource consumption.

According to Splunk Documentation:

"Data model acceleration speeds up reporting for the entire set of fields that you define in a data model and which you and your Pivot users want to report on." Reference: [Accelerate Data Models - Splunk Documentation](#)
