높은 적중율을 자랑하는 CAS-004시험응시료 덤프자료

우선 우리KoreaDumps 사이트에서CompTIA CAS-004관련자료의 일부 문제와 답 등 샘플을 제공함으로 여러분은 무료로 다운받아 체험해보실 수 있습니다.체험 후 우리의KoreaDumps에 신뢰감을 느끼게 됩니다. KoreaDumps에서 제공하는CompTIA CAS-004덤프로 시험 준비하시면 편안하게 시험을 패스하실 수 있습니다.

최신 CompTIA CASP CAS-004 무료샘플문제 (Q55-Q60):

질문 # 55
All staff at a company have started working remotely due to a global pandemic. To transition to remote work, the company has migrated to SaaS collaboration tools. The human resources department wants to use these tools to process sensitive information but is concerned the data could be:
- Leaked to the media via printing of the documents
- Sent to a personal email address
- Accessed and viewed by systems administrators
- Uploaded to a file storage site
Which of the following would mitigate the department's concerns?

- A. Proxy, secure VPN, endpoint encryption, and AV
- B. Watermarking, forward proxy, DLP, and MFA
- C. VDI, proxy, CASB, and DRM
- D. Data loss detection, reverse proxy, EDR, and PGP

정답：B

설명：
Watermarking would help against leaking to 3rd-parties, and DLP would help with sending to unauthorized email addresses. Forward proxy would deal with uploading to file storage site.

질문 # 56
The Chief information Officer (CIO) of a large bank, which uses multiple third-party organizations to deliver a service, is concerned about the handling and security of customer data by the parties. Which of the following should be implemented to BEST manage the risk?

- A. Establish a team using members from first line risk, the business unit, and vendor management to assess only design security controls of all suppliers. Store findings from the reviews in a database for all other business units and risk teams to reference.
- B. Establish an audit program that regularly reviews all suppliers regardless of the data they access, how they access the data, and the type of data, Review all design and operational controls based on best practice standard and report the finding back to upper management.
- C. Establish a review committee that assesses the importance of suppliers and ranks them according to contract renewals. At the time of contract renewal, incorporate designs and operational controls into the contracts and a right-to-audit clause. Regularly assess the supplier's post-contract renewal with a dedicated risk management team.
- D. Establish a governance program that rates suppliers based on their access to data, the type of data, and how they access the data Assign key controls that are reviewed and managed based on the supplier's rating. Report finding units that rely on the suppliers and the various risk teams.

정답：C

질문 # 57
A systems engineer needs to develop a solution that uses digital certificates to allow authentication to laptops.
Which of the following authenticator types would be most appropriate for the engineer to include in the design?

- A. Device certificate
- B. TOTP token
- C. Biometric
- D. Smart card

정답：A

설명：
Using digital certificates for authentication is a secure method to control access to laptops and other devices. A device certificate can serve as an authenticator by providing a means for the device to prove its identity in a cryptographic manner. This certificate-based authentication is commonly used in enterprise environments for strong authentication.

질문 # 58
A software company is developing an application in which data must be encrypted with a cipher that requires the following:
Initialization vector
Low latency
Suitable for streaming
Which of the following ciphers should the company use?

- A. Cipher block chaining
- B. Cipher feedback
- C. Electronic codebook

- D. Cipher block chaining message authentication code

정답：B

설명：
CFB mode is converting a block cipher into a type of stream cipher. The encryption algorithm is used as a key-stream generator to produce key-stream that is placed in the bottom register. This key stream is then XORed with the plaintext as in case of stream cipher.

질문 # 59
A bank hired a security architect to improve its security measures against the latest threats The solution must meet the following requirements
* Recognize and block fake websites
* Decrypt and scan encrypted traffic on standard and non-standard ports
* Use multiple engines for detection and prevention
* Have central reporting
Which of the following is the BEST solution the security architect can propose?

- A. EDR
- B. Web filtering
- C. CASB
- D. NGFW

정답：D

설명：
A next-generation firewall (NGFW) is a device or software that provides advanced network security features beyond the traditional firewall functions. A NGFW can provide the following capabilities:
Recognize and block fake websites, using URL filtering and reputation-based analysis Decrypt and scan encrypted traffic on standard and non-standard ports, using SSL/TLS inspection and deep packet inspection Use multiple engines for detection and prevention, such as antivirus, intrusion prevention system (IPS), application control, and sandboxing Have central reporting, using a unified management console and dashboard A cloud access security broker (CASB) is a device or software that acts as an intermediary between cloud service users and cloud service providers. A CASB can provide various security functions such as visibility, compliance, data security, and threat protection, but it does not provide all the capabilities of a NGFW. Web filtering is a technique that blocks or allows web access based on predefined criteria such as categories, keywords, or reputation. Web filtering can help recognize and block fake websites, but it does not provide all the capabilities of a NGFW. Endpoint detection and response (EDR) is a technology that monitors and analyzes the activity and behavior of endpoints such as computers or mobile devices. EDR can help detect and respond to advanced threats, but it does not provide all the capabilities of a NGFW. Reference: [CompTIA Advanced Security Practitioner (CASP+) Certification Exam Objectives], Domain 2: Enterprise Security Architecture, Objective 2.2: Select appropriate hardware and software solutions
