VMware Cloud on AWS: Master Specialist 2024 Sample Questions (Q15-Q20):

NEW QUESTION # 15

Standard security practice for a company requires that all administrator-level user accounts have their passwords changed every 60 days. The `cloudadmin@vmc.local` account password is changed by an administrator through the VMware vSphere Client to adhere to the security policy. When the administrator attempts to log into the VMware Cloud on AWS vCenter Server through the VMware vSphere Client a few days later as `cloudadmin@vmc.local` using the account credentials copied from the VMware Cloud console, the administrator's access is denied.

What is the likely cause of this issue?

- A. When the password for `cloudadmin@vmc.local` is updated from the VMware vSphere Client, the updated password is not reflected in the VMware Cloud console.
- B. The `cloudadmin@vmc.local` account password should not be changed through the VMware vSphere Client. In order to prevent unauthorized access to VMware Cloud on AWS by non-authorized individuals, VMware will lock the account out.
- C. The `cloudadmin@vmc.local` account password should only be changed through the appliance management interface of the VMware vCenter Server.
- D. The `cloudadmin@vmc.local` password change confirmation email has not been approved by an Organization Owner.

Answer: A

NEW QUESTION # 16

A company is operating a main data center and two smaller data centers in branch offices. The main data center is being replicated to a disaster recovery site at a co-located data center with a recovery point objective (RPO) of five minutes and a recovery time objective (RTO) of two hours. The branch data centers are shipping backup tapes to the main data center on a weekly basis.

What would be a cost-efficient VMware solution that would improve RTO and RPO for the branch office data centers while maintaining the recovery time for the main data center?

- A. Create a software-defined data center (SDDC) in VMware Cloud on AWS. Create a shared content library and let the branch offices subscribe to it. Export the virtual machines in the branch offices to OVF files on the shared content library on a weekly basis.
- B. Create a software-defined data center (SDDC) in VMware Cloud on AWS. Activate VMware Site Recovery. Replace the co-located disaster recovery (DR) site for the main data center with VMware Site Recovery. For the branch offices, implement VMware Cloud Disaster Recovery (VCDR).
- C. Create a software-defined data center (SDDC) in VMware Cloud on AWS. Migrate the disaster recovery solution from the co-located data center to the VMware Cloud on AWS SDDC. Create regular copies of the virtual machines at the branch offices and use AWS Snowball to directly ship the copies to an AWS data center and store them on AWS S3 buckets.
- D. Create a software-defined data center (SDDC) in VMware Cloud on AWS. Replace the co-located site for the main data center and the backup tape shipping for the branch offices with VMware Cloud Disaster Recovery (VCDR).

Answer: A

NEW QUESTION # 17

An architect is designing a company's hybrid cloud environment. Traffic between their local data center and VMC on AWS software-defined data center (SDDC) requires a high-speed, low latency connection. The connection type should also support connectivity to services currently being consumed in AWS.

Which connection type will meet these requirements?

- A. Multiprotocol Label Switching (MPLS)
- B. Four IPsec tunnels for greater bandwidth & resiliency
- C. AWS Direct Connect
- D. Route-based VPN

Answer: C

NEW QUESTION # 18

An administrator deploys a virtual machine to its software-defined data center (SDDC) and configures it to perform backups of the

other virtual machines in the SDDC. The administrator also creates an AWS Simple Storage Service (S3) bucket in the linked Amazon Virtual Private Cloud (VPC) and is attempting to use the S3 bucket as a repository for their backups. The administrator confirms that the backup software is capable of using AWS S3 storage as a backup repository, and that the AWS S3 bucket is configured to use an endpoint in the linked VPC.

What else should the administrator do to ensure connectivity between SDDC virtual machines and the AWS S3 repository in the linked VPC through the Elastic Network Interface?

- A. Configure Direct Connect to a Private Virtual Interface for access to AWS services.
- B. Configure a route-based VPN for the SDDC to the VPC.
- C. Configure Direct Connect to a Public Virtual Interface for access to AWS services.
- D. Ensure Service Access for S3 is enabled in Networking and Security for the SDDC.

NEW QUESTION # 19

An organization has purchased both VMware Cloud on AWS and VMware vRealize Network Insight Cloud. Which additional integrated functionality are they able to utilize?

- A. Collection of underlying AWS networking information sent to VMware vRealize Network Insight Cloud without additional configuration
- B. Automatic software-defined data center (SDDC) grouping in VMware Cloud on AWS
- C. Creation of VMware HCX mobility groups from VMware vRealize Network Insight Cloud discovered applications
- D. Automatic creation of network segment in VMware Cloud on AWS by VMware vRealize Network Insight Cloud

Answer: C

Explanation:

You can export waves of VMware vRealize Network Insight discovered applications to HCX for migration as Mobility Groups. HCX integration with vRealize Network Insight is available through API calls.
