### PMI PMP - Project Management Professional (2026) Sample Questions (Q267-Q272):

#### NEW QUESTION # 267

An experienced project manager with a technical background has been assigned to a complex project. While in the planning phase, the project manager conducted the cost estimation for the project based on their experience using the work breakdown structure (WBS) estimation technique. Unfortunately, the project exceeded the estimated budget and failed to be delivered. What should the project manager have done to prevent this?

- A. Reviewed the estimations with the project sponsor
- **B. Used the analogous estimating technique**
- C. Used the parametric estimating technique
- D. Utilized expert judgment to validate the estimations

**Answer: B**

#### NEW QUESTION # 268

The project is going through quality assurance. Which of the following is a key tool that will be utilized in this process?

- A. Quality improvement
- B. Quality testing
- **C. Quality audits**
- D. Quality management plan

**Answer: C**

Explanation:

Section: Mix Questions

#### NEW QUESTION # 269

A project manager has been assigned to lead a project with limited funding and resources. During the requirements brainstorming session, several stakeholders request a long list of requirements for a new project, which exceeds the budget. What should the project manager do first?

- A. Meet with the sponsor to obtain their feedback regarding critical requirements in the view of senior management.
- **B. Host a requirements workshop and ask the stakeholders to prioritize the requirements based on critical needs.**
- C. Reach out to the sponsor and request additional budget and capacity in order to complete the project.
- D. Review the requirements and determine which of them can be removed, then advise the stakeholders of the changes.

**Answer: B**

Explanation:

When resource constraints conflict with the full scope of stakeholder requirements, the project manager should first facilitate a requirements prioritization workshop. This allows stakeholders to collaboratively identify the most critical features and align scope with available resources.

The PMBOK Guide - Seventh Edition emphasizes value delivery and stakeholder collaboration in prioritizing scope based on constraints. Requirements workshops are standard tools in scope planning and requirements elicitation.

Option B makes unilateral scope decisions, which could lead to stakeholder dissatisfaction.

Option C is valid, but only after the team jointly prioritizes based on business need.

Option D skips proper prioritization and assumes the budget can be increased, which may not be feasible.

### NEW QUESTION # 270

You are fairly new to managing a project but have been a team member for many years. You are pleased you were selected to manage your company's 2015 model line of hybrid vehicles. You are now planning your project and have been preparing the subsidiary plans as well. You realize some project documents also are required to help manage your project. An example of one that you believe will be especial helpful is the \_\_\_\_\_.

- A. Project statement of work
- B. Key performance indicators
- C. Project management information system
- D. Business case

**Answer: A**

Explanation:

Explanation/Reference:

Explanation:

The project statement of work is a useful document as it describes the products, services, or results the project is to deliver. It references the business need, product scope description, and the strategic plan.

### NEW QUESTION # 271

A subcontracting company is presenting its feature release A key stakeholder is asking to add a new feature to the product How should the project manager deal with the new requirement?

- A. Engage an arbitrator to resolve any conflict while handling the new requirement
- B. Follow the change management process and work with procurement if needed
- C. Allocate resources to work on the new feature immediately to complete the request
- D. Add the change to the next sprint to meet the customer's needs

**Answer: B**

Explanation:

According to the PMBOK Guide, a change request is a formal proposal to modify any document, deliverable, or baseline. Change requests are processed through the Perform Integrated Change Control process, which involves reviewing, analyzing, approving, or rejecting changes. The project manager should follow the change management process and work with procurement if needed to deal with the new requirement from the key stakeholder. The project manager should assess the impact of the change on the project scope, schedule, cost, quality, risk, and other aspects, and obtain approval from the appropriate authority before implementing the change. The project manager should also communicate the change to the subcontracting company and negotiate any contractual modifications if necessary. The project manager should not engage an arbitrator, add the change to the next sprint, or allocate resources to work on the new feature immediately, as these actions may bypass the change management process, create conflicts, or disrupt the project plan.
