

PEGACPRSA22V1 Neuesten und qualitativ hochwertige Prüfungsmaterialien bietet - quizfragen und antworten

Pegasystems PEGACPRSA22V1 Unterlagen von It-Pruefung sind besser als andere entsprechende Unterlagen für Pegasystems PEGACPRSA22V1 Prüfung, weil sie einmaligen Erfolg der Prüfung gewährleisten. Die hohe Durchlaufzeit sind von vielen Kandidaten geprüft. Pegasystems PEGACPRSA22V1 Dumps von It-Pruefung sind der erfolgreiche Weg. Sie können viel Zeit für die Vorbereitung der PEGACPRSA22V1 Prüfung sparen und auch mit guter Note die PEGACPRSA22V1 Zertifizierungsprüfung machen.

Die Pegasystems PegaCPRSA22V1 -Prüfung richtet sich an diejenigen, die zertifizierte Architekten von Pega Robotics Systems werden möchten. Diese Zertifizierungsprüfung ist eine großartige Möglichkeit, Ihr Wissen und Ihre Fähigkeiten in Pega -Robotik und Automatisierung zu demonstrieren. Die Prüfung deckt eine breite Palette von Themen wie Pega Robotics Studio, Pega Robotics Runtime und Pega Robotic Automation Architect Essentials ab.

>> PEGACPRSA22V1 Vorbereitung <<

Pegasystems PEGACPRSA22V1 Prüfungsübungen - PEGACPRSA22V1 Praxisprüfung

Wir sollen im Leben nicht immer etwas von anderen fordern, wir sollen hingegen so denken, was ich für andere tun kann. In der Arbeit können Sie große Gewinne für den Boss bringen, legt der Boss natürlich großen Wert auf Ihre Position sowie Gehalt. Wenn wir ein kleiner Angestellter sind, werden wir sicher eines Tages ausrangiert. Wir sollen uns bemühen, die Pegasystems PEGACPRSA22V1 Zertifizierung zu bekommen und Schritt für Schritt nach oben gehen. Die Fragen und Antworten zur Pegasystems PEGACPRSA22V1 Zertifizierungsprüfung von It-Pruefung helfen Ihnen, den Erfolg durch eine Abkürzung zu erlangen. Viele IT-Fachleute haben die Fragenkataloge zur Pegasystems PEGACPRSA22V1 Prüfung von It-Pruefung gekauft.

Die Pega Robotics System Architect 22 -Prüfung basiert auf der neuesten Version der Pega Robotic Automation Plattform. Bewerber, die diese Prüfung bestehen, können ihre Fähigkeiten in den neuesten Funktionen und Funktionen der Plattform nachweisen. Diese Zertifizierungsprüfung ist ideal für Entwickler, Architekten und Berater, die sich für den Bau von Automatisierungslösungen interessieren, die sich wiederholende Aufgaben automatisieren und die Betriebseffizienz verbessern können.

Die PEGACPRSA22V1-Prüfung eignet sich für Personen, die Erfahrung in der Arbeit mit Pega Robotics haben und ihre Fähigkeiten auf die nächste Stufe bringen möchten. Sie ist auch ideal für Personen, die ihre Karrierechancen verbessern und ihr Verdienstpotezial steigern möchten, indem sie ein zertifizierter Pega Robotics Systemarchitekt werden.

Pegasystems Certified Pega Robotics System Architect 22 PEGACPRSA22V1 Prüfungsfragen mit Lösungen (Q82-Q87):

82. Frage

Pega Robot Studio provides five rules on how to differentiate between cloneable application objects when using key assignments in automations. The first rule states that an event creates the instance to set the context of a cloneable object. The remaining four rules state the requirements for a key assignment.

In the Answer Area, determine if each rule description requires a key assignment.

Answer Area	Rule Description	Key Assignment Required?
	An event from Child Context to Parent Context	Requires a key assignment Does not require a key assignment
	An event from Parent Context to Child Context	Requires a key assignment Does not require a key assignment
	Logic within the same context	Requires a key assignment Does not require a key assignment
	An event from No Context to a Context	Requires a key assignment Does not require a key assignment

Antwort:

Begründung:

Answer Area	Rule Description	Key Assignment Required?
	An event from Child Context to Parent Context	Requires a key assignment Does not require a key assignment
	An event from Parent Context to Child Context	Requires a key assignment Does not require a key assignment
	Logic within the same context	Requires a key assignment Does not require a key assignment
	An event from No Context to a Context	Requires a key assignment Does not require a key assignment

Answer Area	
Rule Description	Key Assignment Required?
An event from Child Context to Parent Context	Requires a key assignment ▼ Requires a key assignment Does not require a key assignment
An event from Parent Context to Child Context	Does not require a key assignment ▼ Requires a key assignment Does not require a key assignment
Logic within the same context	Requires a key assignment ▼ Requires a key assignment Does not require a key assignment
An event from No Context to a Context	Does not require a key assignment ▼ Requires a key assignment Does not require a key assignment

83. Frage

When maintaining a robotic project, you encounter two separate issues with matching. In the first issue, the hierarchy of a web page has changed, and the control no longer matches. In the other issue, the control has multiple match rules, and one fails to match the control. Which two of the following interrogation methods can you use to resolve the matching issues in the project? (Choose Two)

- A. Replace Matching
- B. Debug Control
- C. Replace Control
- D. Debug Matching
- E. Refresh Matching

Antwort: D,E

Begründung:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

According to Pega Robotics Studio - Matching and Interrogation Tools Documentation:

"Matching defines how a control is identified at runtime. When application hierarchies change or specific match rules fail, Robot Studio provides diagnostic tools to reestablish and verify the correct control associations." The guide specifies the following tools and their purpose:

* Refresh Matching

"Refresh Matching updates the control's properties and hierarchy information based on the current application structure without re-interrogating the control. This tool is useful when an application's DOM or hierarchy has changed."

* Debug Matching

"Debug Matching opens the Match Rules Diagnostics window and evaluates each match rule in real-time to show which rules pass or fail. It assists in identifying which match rule must be corrected or replaced." By contrast:

* Replace Matching - Recreates the match rules from scratch (not the preferred first step).

* Replace Control - Reinterrogates the entire control and removes existing references (used only when the control is entirely invalid).

* Debug Control - Analyzes properties but not matching logic.

Thus, the two correct tools to address the described issues are:

Refresh Matching (for hierarchy change)

Debug Matching (for failed rule troubleshooting)

84. Frage

You are designing an attended project for a banking customer. This project requires you to add new customers from an application to a combo box in a custom user surface.

Which steps do you take to gain access to the methods of the combo box items within an automation?

- A. Open the Globals tab, filter for the method that you want to access, and then drag the method to the design surface.
- **B. Drag the combo box to the automation surface to open the Select action dialog box, and then filter for the method that you want to access.**
- C. Select the combo box in the Palette tab of an automation, and then filter for the method that you want to access in the properties grid.
- D. Select the combo box in a design form of the user interface to open the Select action window.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

When working with UI controls such as combo boxes in a custom user interface (Windows form or User Interaction form), you can expose their methods and events by dragging the control from the Palette or Object Explorer to the automation design surface.

According to the Pega Robotics System Design and Implementation Guide, section "Accessing Control Methods and Properties in Automations":

"To access a control's methods or events in an automation, drag the control (such as a combo box or text box) from the Object Explorer or Palette to the automation surface.

The Select Action dialog box appears, allowing you to filter and choose the specific method or event (for example, AddItem, RemoveItem, or Clear)." Detailed Reasoning:

* A. Drag the combo box to the automation surface... - Correct. This opens the Select Action dialog, exposing all available methods and events for that control.

* B. Open the Globals tab... - Incorrect. The combo box methods are not global; they belong to a specific UI form.

* C. Select the combo box in a design form... - Incorrect. This action edits UI layout, not automation logic.

* D. Select the combo box in the Palette tab... - Incorrect. The properties grid shows attributes, not callable methods.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, Using Control Methods and Events in Automations section (Pega Robotics 19.1 and later).

85. Frage

You are debugging a project with several automations. You are particular about one specific value in a procedure automation and want to monitor the value while debugging.

Which debugging window do you use during the debugging process?

- A. Locals
- B. Automation Watches
- C. Breakpoints
- **D. Threads**

Antwort: D

86. Frage

Automation you are working on creates a data collection, so you have extracted a Data Table proxy. What action occurs when you drag the DataTableProxy from the Globals section of the Palette to the automation surface?

- A. A proxy design block is added to the automation surface.
- B. A This property is added to the automation surface.
- **C. A Select Action dialog box opens.**
- D. A Quick Add dialog box opens.
- E. A GetTable method is added to the automation surface.

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Pega Robotics System Exact Extract:

In Pega Robot Studio, the DataTableProxy component acts as an intermediary between automations and a Data Table, allowing the automation to read, manipulate, and update tabular data stored in the project.

When you drag an element such as a DataTableProxy from the Globals section of the Palette onto the automation design surface, Pega Robot Studio presents the user with available actions (methods, properties, or events) that can be executed using that component. This is done through a Select Action dialog box, which lists all available methods associated with the DataTableProxy (e.g., GetTable, AddRow, RemoveRow, Find, Update, etc.).

From the Pega Robotics System Design and Implementation Guide (Data Table Proxy and Data Handling section):

"When a component such as a DataTableProxy or connector object is dragged from the Palette onto the automation design surface, the system opens the Select Action dialog box.

This dialog lists all available methods and properties of the selected object, allowing the developer to select the action to instantiate on the automation surface.

The dialog ensures developers can directly add the desired operation (such as GetTable or UpdateRow) without manually searching through the object's members." Detailed Reasoning:

* The DataTableProxy represents a data-handling object; it does not directly add a "property" or "method" by default when dragged.

* Instead, Robot Studio prompts you with a Select Action dialog box, allowing you to choose which specific method (like GetTable, FindRow, or AddRow) you want to include in your automation.

* After the selection is made, the chosen method (for example, GetTable) is then displayed on the automation surface.

Option Analysis:

* A. Incorrect - A property is not automatically added; you must choose an action first.

* B. Incorrect - The Quick Add dialog is used for linking variables and not for proxy components.

* C. Incorrect - A "proxy design block" is not automatically added without specifying a method.

* D. Correct - The Select Action dialog box opens to let you choose the method or property to add.

* E. Incorrect - GetTable may be one of the options available, but it is not added automatically.

Hence, the correct answer is D - dragging a DataTableProxy from the Globals section triggers the Select Action dialog box to open, allowing the developer to choose which action to use.

Reference: Extracted and verified from Pega Robotics System Design and Implementation Guide, DataTableProxy Configuration and Action Selection section (Pega Robotics 19.1 and later).
