

TOP Pdf AZ-400 Dumps - Trustable Microsoft Reliable AZ-400 Test Pattern: Designing and Implementing Microsoft DevOps Solutions

2026 Latest PrepAwayExam AZ-400 PDF Dumps and AZ-400 Exam Engine Free Share: <https://drive.google.com/open?id=1uivgSy7IEzIir0K93SUsA9vo2adBSKLM>

We are carrying out renovation about AZ-400 test engine all the time to meet the different requirements of the diversified production market. Thus we have prepared three kinds of versions on AZ-400 preparation materials. If you are used to study with paper-based materials you can choose the PDF version of our AZ-400 Study Guide. If you would like to get the mock test before the real AZ-400 exam you can choose the software version, and if you want to study in anywhere at any time then our online APP version is your best choice since you can download it in any electronic devices.

The AZ-400 certification exam is divided into different domains, including DevOps Planning and Implementation, Continuous Integration and Delivery, Dependency Management, Application Infrastructure, and Continuous Feedback. These domains cover various topics such as automation, security, compliance, infrastructure as code, and monitoring. AZ-400 exam is designed to measure the candidate's proficiency in designing and implementing DevOps solutions using Microsoft Azure.

Earning the Microsoft AZ-400 Certification can open up a range of career opportunities for professionals. It demonstrates to potential employers that the candidate has the skills and knowledge needed to design and implement DevOps solutions using Microsoft technologies. Designing and Implementing Microsoft DevOps Solutions certification can lead to roles such as DevOps engineer, cloud architect, and software development manager.

Reliable AZ-400 Test Pattern | AZ-400 Certified Questions

Of course, when we review a qualifying exam, we can't be closed-door. We should pay attention to the new policies and information related to the test AZ-400 certification. For the convenience of the users, the AZ-400 test materials will be updated on the homepage and timely update the information related to the qualification examination. Annual qualification examination, although content broadly may be the same, but as the policy of each year, the corresponding examination pattern grading standards and hot spots will be changed, the AZ-400 Test Prep can help users to spend the least time to pass the exam.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q79-Q84):

NEW QUESTION # 79

You have an Azure DevOps organization named Contoso and an Azure subscription. You use Azure DevOps to build and deploy a web app named App1. Azure Monitor is configured to generate an email notification in response to alerts generated whenever App1 generates a server-side error.

You need to receive notifications in Microsoft Teams whenever an Azure Monitor alert is generated.

Which two actions should you perform? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Modify an action group in Azure Monitor.
- B. Create an Azure Monitor workbook.
- C. Create an Azure logic app that has an Azure DevOps trigger.
- D. Create an Azure logic app that has an HTTP request trigger.
- E. Modify the Diagnostics settings in Azure Monitor.

Answer: A,C

Explanation:

NEW QUESTION # 80

You use GitHub Enterprise Server as a source code repository.

You create an Azure DevOps organization named Contoso.

In the Contoso organization, you create a project named Project 1.

You need to link GitHub commits, pull requests, and issues to the work items of Project 1. The solution must use OAuth-based authentication. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions	Answer Area
From Project Settings in Azure DevOps, create a service hook subscription.	
From Organization settings in Azure DevOps, add an OAuth configuration.	
From Developer settings in GitHub Enterprise Server, register a new OAuth app.	
From Project Settings in Azure DevOps, add a GitHub connection.	
From Developer settings in GitHub Enterprise Server, generate a private key.	
From Organization settings in Azure DevOps, connect to Azure Active Directory (Azure AD).	

Answer:

Explanation:

Answer Area  Microsoft

From Developer settings in GitHub Enterprise Server, register a new OAuth app.

Organization settings in Azure DevOps, add an OAuth configuration

From Project Settings in Azure DevOps, add a GitHub connection.

1 - From Developer settings in GitHub Enterprise Server, register a new OAuth app.

2 - Organization settings in Azure DevOps, add an OAuth configuration

3 - From Project Settings in Azure DevOps, add a GitHub connection.

NEW QUESTION # 81

You need to recommend a solution for deploying charts by using Helm and Tiller to Azure Kubemets Service (AKS) in an RBAC-enabled cluster.

Which three commands should you recommend be run in sequence? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.

Microsoft
Commands Answer Area

helm install

kubectl create

helm completion

helm init

helm serve

Answer:

Explanation:

Microsoft
Commands Answer Area

helm install

kubectl create

helm completion

helm init

helm serve

kubectl create

helm init

helm install

Explanation

Microsoft
Answer Area

kubectl create

helm init

helm install

Step 1: Kubectl create

You can add a service account to Tiller using the `--service-account <NAME>` flag while you're configuring Helm (step 2 below). As a prerequisite, you'll have to create a role binding which specifies a role and a service account name that have been set up in advance.

Example: Service account with cluster-admin role

```
$ kubectl create -f rbac-config.yaml
```

```
serviceaccount "tiller" created
```

```
clusterrolebinding "tiller" created
```

```
$ helm init --service-account tiller
```

Step 2: helm init

To deploy a basic Tiller into an AKS cluster, use the helm init command.

Step 3: helm install

To install charts with Helm, use the helm install command and specify the name of the chart to install.

NEW QUESTION # 82

You have an Azure subscription that uses Azure Automation State Configuration to manage the configuration of virtual machines.

You need to identify which nodes are noncompliant.

How should you complete the query? To answer, drag the appropriate values to the correct targets. Each value may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Values	Answer Area
Category	AzureDiagnostics
DscReportStatus	where <input type="text"/> == "DscNodeStatus"
Message	where <input type="text"/> contains ""
OperationName	where <input type="text"/> != "Compliant"
Resource	
ResultType	

Answer:

Explanation:

Values	Answer Area
Category	AzureDiagnostics
DscReportStatus	where <input type="text"/> == "DscNodeStatus"
Message	where <input type="text"/> contains ""
OperationName	where <input type="text"/> != "Compliant"
Resource	
ResultType	

Explanation:

```
AzureDiagnostics
| where Category == "DscNodeStatus"
| where OperationName contains ""
| where ResultType != "Compliant"
```

NEW QUESTION # 83

You have an application that consists of several Azure App Service web apps and Azure functions.

You need to access the security of the web apps and the functions.

Which Azure features can you use to provide a recommendation for the security of the application?

- A. Smart Detection in Azure Application Insights
- **B. Compute & apps in Azure Security Center**
- C. Security & Compliance in Azure Log Analytics

- D. Resource health in Azure Service Health

Answer: B

Explanation:

Monitor compute and app services: Compute & apps include the App Services tab, which App services: list of your App service environments and current security state of each.

Recommendations

This section has a set of recommendations for each VM and computer, web and worker roles, Azure App Service Web Apps, and Azure App Service Environment that Security Center monitors. The first column lists the recommendation. The second column shows the total number of resources that are affected by that recommendation. The third column shows the severity of the issue.

Incorrect Answers:

C: Smart Detection automatically warns you of potential performance problems, not security problems in your web application.
