

2026 HPE7-A07 Exam Prep 100% Pass | Professional HPE7-A07 Test Answers: Aruba Certified Campus Access Mobility Expert Written Exam

HPSC AE 2026 | New Batch Launched

AE & JE Coaching in Delhi – Science Stoppers

Dreaming of a Govt. Engineering Job?
Your journey starts here

Why Students Choose Science Stoppers?

- ✓ Concept + Numerical Teaching
- ✓ Civil, Mech & Electrical Syllabus
- ✓ PYQs & Mock Tests
- ✓ Small Batches & Personal Attention
- ✓ Offline & Online Classes

Course Covered

- HPSC AE 2026
- SSC JE 2026
- State JE Exams
- RRB JE & Technical Exam

Batch Details

- Delhi Location
- Starting Soon
- Flexible Timings
- Online Classes

Who Can Join?

- ✓ B.E / B.Tech Engineers
- ✓ Diploma Holders
- ✓ Final Year Students
- ✓ Working Professionals

Join Delhi's trusted AE & JE Coaching Institute

Science Stoppers

HP HPE7-A07 certification exams are a great way to analyze and evaluate the skills of a candidate effectively. Big companies are always on the lookout for capable candidates. You need to pass the HPE7-A07 Certification Exam to become a certified professional. This task is considerably tough for unprepared candidates however with the right HPE7-A07 prep material there remains no chance of failure.

HP HPE7-A07 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Authentication Authorization: Senior HP RF network engineers are tested on their skills in designing and troubleshooting AAA configurations, including ClearPass integration. This ensures that network access is securely managed according to the customer's requirements.
Topic 2	<ul style="list-style-type: none"> Performance Optimization: The Aruba Certified Campus Access Mobility Expert Written exam focuses on analyzing and remediating performance issues within a network. It measures the ability of a senior RF network engineer to fine-tune network operations for maximum efficiency and speed.
Topic 3	<ul style="list-style-type: none"> Routing: This Aruba Certified Campus Access Mobility Expert Written exam section measures the ability to design and troubleshoot routing topologies and functions, ensuring that data efficiently navigates through complex networks, a key skill for HP solutions architects.

Topic 4	<ul style="list-style-type: none"> Switching: Senior HP RF network engineers must demonstrate proficiency in implementing and troubleshooting Layer 2 3 switching, including broadcast domains and interconnection technologies. This ensures seamless and efficient data flow across network segments.
Topic 5	<ul style="list-style-type: none"> Security: This topic evaluates the ability of a senior HP RF network engineer to design and troubleshoot security implementations, focusing on wireless SSID with EAP-TLS and GBP. It ensures the network is secure from unauthorized access and threats.
Topic 6	<ul style="list-style-type: none"> Connectivity: The topic covers developing configurations, applying advanced networking technologies, and identifying design flaws. It tests the skills of a senior HP RF network engineer in creating reliable, high-performing networks tailored to specific customer needs.
Topic 7	<ul style="list-style-type: none"> Network Resiliency and Virtualization: This section of the Aruba Certified Campus Access Mobility Expert Written exam assesses the expertise of a senior HP RF network engineer in designing and troubleshooting mechanisms for resiliency, redundancy, and fault tolerance. It is crucial for maintaining uninterrupted network services.

HPE7-A07 Test Answers | HPE7-A07 Exam Discount

PrepAwayPDF has been designing and offering real HP Aruba Certified Campus Access Mobility Expert Written Exam exam dumps for many years. We regularly update our valid HP HPE7-A07 certification test preparation material to keep them in line with the current Aruba Certified Campus Access Mobility Expert Written Exam (HPE7-A07) exam content and industry standards. Professionals from different countries give us their valuable feedback to refine HPE7-A07 actual dumps even more.

HP Aruba Certified Campus Access Mobility Expert Written Exam Sample Questions (Q37-Q42):

NEW QUESTION # 37

A customer has recently deployed a wireless system using AP-535S to provide connectivity for their employees who are responsible for uploading large video files for review. The customer wants to use features that provide throughput gains for large data uploads. Which feature can be enabled to meet the requirement and simultaneously allow spatially separated clients access to the channel?

- A. OFOMA
- B. DL MU-MIMO
- C. UL MU-MIMO
- D. UL-TXBF

Answer: C

Explanation:

UL MU-MIMO, or Uplink Multi-User Multiple Input Multiple Output, is a technology that allows multiple clients to transmit data to the access point simultaneously, increasing overall throughput and efficiency, especially for upload-heavy scenarios like video file uploads. This technology enables spatially separated clients to access the channel at the same time, which can improve performance for clients when uploading large files.

NEW QUESTION # 38

A network administrator accesses HPE Aruba Networking Central and notices that visitors consume too much internet bandwidth starving employee traffic when accessing an external service. Therefore, the administrator wants to limit wireless bandwidth to 60 Mbps in both directions among all users in the voice role and no more than 10 Mbps in both directions for YouTube traffic. Deep packet inspection, web content classification, and firewall visibility are enabled. Which configurations are required to accomplish this task? (Select two.)

- A. ☐

- B. ☐
- C. ☐
- D. ☒

Answer: A,D

Explanation:

To achieve the bandwidth limits set by the network administrator, both per-application and total limits need to be configured. Option B shows the configuration for setting a per-application bandwidth limit, which can restrict YouTube traffic to 10 Mbps in both directions. Option D shows the configuration for setting a total bandwidth limit for all users within the voice role to 50000 Kbps (or 50 Mbps), satisfying the requirement to restrict total wireless bandwidth. By applying these configurations in HPE Aruba Networking Central, the administrator will successfully implement the necessary controls to ensure that visitor traffic does not impede the network performance for employee traffic, aligning with the capabilities of Aruba solutions to manage and prioritize network resources effectively.

NEW QUESTION # 39

Exhibit.

What is the expected behavior for ARP traffic sent from H1?

- A. A2 will drop the ARP traffic.
- B. A2 will send the ARP traffic out of ports 1/1/1 and 1/1/3.
- C. A2 will flood the ARP traffic out of all interfaces.
- D. A2 will send the ARP traffic out of ports 1/1/1-1/1/4.

Answer: C

Explanation:

In a VXLAN environment, unknown unicast traffic, such as ARP requests from H1, which does not have a specific destination MAC address learned by the switch A2, will be flooded out of all interfaces. This flooding behavior is necessary because A2 needs to ensure that the ARP request reaches its intended destination, which might be on any of the interfaces. It's a part of the standard behavior of switches to handle ARP traffic when the destination hardware address is unknown.

NEW QUESTION # 40

What is the recommended configuration to ensure link aggregation is consistent in a campus topology using VSX with two aggregation switches and downlinks to access switches?

- A. Use the command "vsx-sync mclag-interfaces" under the VSX context.
- B. Use the command "vsx-sync active-gateways" under the VSX context.
- C. Keep the MTU values at the default setting for GRE and VXLAN communications.
- D. Use a custom LACP hash algorithm for improved load balancing.

Answer: A

Explanation:

When configuring Virtual Switching Extension (VSX) in a campus topology for link aggregation across two aggregation switches, it is important to synchronize Multi-Chassis Link Aggregation Group (MC-LAG) interfaces. The command "vsx-sync mclag-interfaces" ensures that the state and configuration of MC-LAG interfaces are synchronized between the two VSX-linked switches, providing consistent link aggregation and preventing any loops or mismatched configurations that might occur if the interfaces were not in sync.

NEW QUESTION # 41

The ACME company has CX 8320 switches at the Services-Aggregation layer and CX 6200 switches at the Wired Access Layer. WiFi WLANs are deployed in an L2 model. After implementing IPv6 for wireless clients alongside IPv4, connectivity problems have increased.

What is the most efficient step to resolve this problem?

- A. Migrate to the GW supercluster with two service aggregation layers
- B. Replace the CX 8320 with CX 8325 switches

- C. Change the CX 8320 profile from L3-Agg to L3-Core
- **D. Replace the CX 8320 with CX 8360 switches**

Answer: D

Explanation:

The CX 8320 has significantly smaller control-plane scale for route tables-especially IPv6-compared to newer CX platforms. When dual-stacking WLAN clients (adding IPv6 alongside IPv4), the number of routes /neighbor entries increases markedly. HPE Aruba platform guidance shows:

* CX 8320/CX 8325 class: ~131K IPv4 and ~32K IPv6 routes.

References: HPE Aruba CX Platform Data-routing table scale by platform (8320 vs 8360); AOS-CX deployment guidance on dual-stack scale at aggregation.

NEW QUESTION # 42

.....

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional HPE7-A07 Certification to pave the way for a better future. Considered many of the candidates are too busy to review, our experts designed the HPE7-A07 question dumps in accord with actual examination questions, which would help you pass the exam with high proficiency.
