

2026 High Hit-Rate JN0-481: Latest Data Center, Specialist (JNCIS-DC) Guide Files

What's more, part of that Dupleader JN0-481 dumps now are free: <https://drive.google.com/open?id=1HL0di0cLxxTWej21i6aYzwtKZz18X1yg>

The study material to get Data Center, Specialist (JNCIS-DC) should be according to individual's learning style and experience. Real Juniper JN0-481 Exam Questions certification makes you more dedicated and professional as it will provide you complete information required to work within a professional working environment. These questions will familiarize you with the JN0-481 Exam Format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions.

Perhaps you agree that strength is very important, but there are doubts about whether our JN0-481 study questions can really improve your strength. It does not matter, we can provide you with a free trial version of our JN0-481 exam braindumps. You can free download the demos of our JN0-481 learning prep easily on our website, and there are three versions according to the three versions of our JN0-481 practice engine. It is really as good as we say, you can experience it yourself.

Exam JN0-481 Material - JN0-481 Reliable Exam Pattern

Our company is a well-known multinational company, has its own complete sales system and after-sales service worldwide. Our JN0-481 real study guide have become a critically acclaimed enterprise, so, if you are preparing for the exam qualification and obtain the corresponding certificate, so our company launched JN0-481 Exam Questions are the most reliable choice of you. The service tenet of our company and all the staff work mission is: through constant innovation and providing the best quality service, make the JN0-481 question guide become the best customers electronic test study materials.

Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q53-Q58):

NEW QUESTION # 53

You want to keep virtual networks isolated from each other within the Juniper Apstra system. In this scenario, what are three ways to accomplish this task? (Choose three.)

- A. Disable Route Target exports when creating the Routing Zones.
- B. Enable Security Policy for virtual networks in the same Routing Zone.
- C. Use Connectivity Templates to block access within the same Routing Zone.
- D. Put each network in different Routing Zones.
- E. Disable IPv4 connectivity when creating the virtual network within the same Routing Zone.

Answer: B,C,D

Explanation:

To keep virtual networks isolated from each other within the Juniper Apstra system, you can use one or more of the following methods:

Enable Security Policy for virtual networks in the same Routing Zone. This allows you to define rules that control the traffic flow between different virtual networks within the same routing zone.

You can specify the source and destination virtual networks, the protocol, the port, and the action (allow or deny) for each rule. The security policy is applied on the ingress interface of the leaf devices.

Use Connectivity Templates to block access within the same Routing Zone. This allows you to customize the connectivity between different racks within the same routing zone. You can create templates that define the link type, the routing protocol, and the access control list (ACL) for each rack pair. The ACL can be used to filter the traffic based on the source and destination IP addresses, the protocol, and the port.

Put each network in different Routing Zones. This allows you to create logical boundaries between different virtual networks based on the route target (RT) values. A routing zone is a collection of virtual networks that share the same RT for importing and exporting routes. Virtual networks in different routing zones do not exchange routes with each other, unless you configure remote EVPN gateways to connect them.

NEW QUESTION # 54

Multitenancy for applications is achieved by creating virtual networks (VNs) within which construct?

- A. connectivity template
- B. routing table
- C. routing zone
- D. security policy

Answer: C

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone.

NEW QUESTION # 55

Multitenancy for applications is achieved by creating virtual networks (VNs) within which construct?

- A. connectivity template
- B. routing table
- C. routing zone
- D. security policy

Answer: C

Explanation:

A routing zone is an L3 domain, the unit of tenancy in multi-tenant networks. You create routing zones for tenants to isolate their IP traffic from one another, thus enabling tenants to re-use IP subnets. In addition to being in its own VRF, each routing zone can be assigned its own DHCP relay server and external system connections. You can create one or more virtual networks within a routing zone, which means a tenant can stretch its L2 applications across multiple racks within its routing zone.

NEW QUESTION # 56

You are working to build an ESI-LAG for a multihomed server. The ESI-LAG is not coming up as multihomed.

Referring to the exhibit, what are two solutions to this problem? (Choose two.)

- A. The gateway IP addresses on both devices must be different.
- B. The LACP system ID on both devices must be the same.
- C. The loopback IP addresses on both devices must be the same.
- D. The ESI ID on both devices must be the same.

Answer: B,D

Explanation:

An ESI-LAG is a link aggregation group (LAG) that spans two or more devices and is identified by an Ethernet segment identifier (ESI). An ESI-LAG provides redundancy and load balancing for a multihomed server in an EVPN-VXLAN network. To configure an ESI-LAG, you need to ensure that the following requirements are met:

The LACP system ID on both devices must be the same. This ensures that the LACP protocol can negotiate the LAG parameters and form a single logical interface for the server.

The ESI ID on both devices must be the same. This ensures that the EVPN control plane can advertise the ESI-LAG as a single Ethernet segment and synchronize the MAC and IP addresses of the server across the devices.

The VLAN ID and VNI on both devices must be the same. This ensures that the server can communicate with other hosts in the same virtual network and that the VXLAN encapsulation and decapsulation can work properly.

In the exhibit, the LACP system ID and the ESI ID on both devices are different, which prevents the ESI-LAG from coming up as multihomed. Therefore, the correct answer is B and D. The LACP system ID on both devices must be the same and the ESI ID on both devices must be the same.

NEW QUESTION # 57

Which two statements are correct regarding a pristine configuration in Juniper Apstra? (Choose two.)

- A. It is the configuration file placed on the device when decommissioning the device.
- B. It is the device's previously active configuration.
- C. It is the device's currently active configuration.
- D. It is the configuration file on a device before acknowledgment in Apstra.

Answer: A,D

Explanation:

A pristine configuration in Juniper Apstra is the configuration file that is used to onboard a device into the Apstra software application. A pristine configuration contains the minimum settings that are required for the device to communicate with the Apstra server, such as the hostname, management IP address, username, password, and SSH key. A pristine configuration has the following characteristics:

It is the configuration file placed on the device when decommissioning the device. This is because when a device is decommissioned from the Apstra software application, it is reverted back to its pristine configuration, which removes all the network configuration and services that were applied by the Apstra software application. This allows the device to be reused or repurposed for another network.

It is the configuration file on a device before acknowledgment in Apstra. This is because when a device is onboarded into the Apstra software application, it is initially in the discovery state, which means that the device is discovered by the Apstra server, but not yet acknowledged by the user.

In the discovery state, the device has the pristine configuration, which can be viewed and edited by the user. Once the user acknowledges the device, the device moves to the deployed state, which means that the device is ready to receive the network configuration and services from the Apstra software application.

NEW QUESTION # 58

.....

Finding 60 exam preparation material that suits your learning preferences, timetable, and objectives is essential to prepare successfully for the test. You can prepare for the Juniper JN0-481 test in a short time and attain the Data Center, Specialist (JNCIS-DC) certification exam with the aid of our updated and valid exam questions. We emphasize quality over quantity, so we provide you with Juniper JN0-481 Actual Exam questions to help you succeed without overwhelming you.

Exam JN0-481 Material: https://www.dumpleader.com/JN0-481_exam.html

This way you will get familiar with Exam JN0-481 Material - Data Center, Specialist (JNCIS-DC) exam pattern and objectives, Juniper Latest JN0-481 Guide Files Compared with other exam learning material files, the operation is simpler and the price is more reasonable, There are so many benefits when you get qualified by the JN0-481 certification, Juniper Latest JN0-481 Guide Files But it is universally accepted that only the studious people can pass the complex actual exam

Millions will fail, Running the code just as it is will throw Exam JN0-481 Material an exception during the SetData call, This way you will get familiar with Data Center, Specialist (JNCIS-DC) exam pattern and objectives.

Compared with other exam learning material files, the operation is simpler and the price is more reasonable, There are so many

benefits when you get qualified by the JN0-481 Certification.

Juniper JN0-481 - Data Center, Specialist (JNCIS-DC) Perfect Latest Guide Files

But it is universally accepted that only the studious people JN0-481 can pass the complex actual exam, Our products will help you clear exam without too much useless effort or money.
