## Amazon AWS Certified Cloud Practitioner Sample Questions (Q566-Q571):

### NEW QUESTION # 566

A company is building a new application on AWS. The company needs the application to remain available if an individual application component fails.

Which design principle should the company use to meet this requirement?

- A. Automation
- **B. Loose coupling**
- C. Disposable resources
- D. Rightsizing

**Answer: B**

Explanation:

Loose coupling is a design principle that involves reducing dependencies between application components so that they can operate independently. This approach ensures that the failure of one component does not affect the availability of the others, thereby improving the application's fault tolerance and resilience. Disposable resources, automation, and rightsizing are valuable principles in cloud architecture, but they do not directly address the requirement of remaining available despite the failure of an individual component like loose coupling does. ### NEW QUESTION # 567

A company needs to identify who accessed an AWS service and what action was performed for a given time period.

Which AWS service should the company use to meet this requirement?

- **A. AWS CloudTrail**
- B. Amazon Inspector
- C. AWS Security Hub
- D. Amazon CloudWatch

**Answer: A**

Explanation:

AWS CloudTrail is a service that enables governance, compliance, operational auditing, and risk auditing of your AWS account. With CloudTrail, you can log, continuously monitor, and retain account activity related to actions across your AWS infrastructure. You can use CloudTrail to identify who accessed an AWS service and what action was performed for a given time period. Amazon CloudWatch, AWS Security Hub, and Amazon Inspector are AWS services that provide different types of monitoring and security capabilities.

### NEW QUESTION # 568

A company needs a repository that stores source code. The company needs a way to update the running software when the code changes.

Which combination of AWS services will meet these requirements? (Select TWO.)

- **A. AWS CodeCommit**
- B. Amazon DynamoDB
- **C. AWS CodeDeploy**
- D. Amazon S3
- E. Amazon Elastic Container Service (Amazon ECS)

**Answer: A,C**

Explanation:

A and B are correct because AWS CodeCommit is the AWS service that provides a fully managed source control service that hosts secure Git-based repositories<sup>1</sup>, and AWS CodeDeploy is the AWS service that automates code deployments to any instance, including Amazon EC2 instances and servers running on-premises<sup>2</sup>. These two services can be used together to store source code and update the running software when the code changes. C is incorrect because Amazon DynamoDB is the AWS service that provides a fully managed NoSQL database service that supports key-value and document data models<sup>3</sup>. It is not related to storing source code or updating software. D is incorrect because Amazon S3 is the AWS service that provides object storage through a web service interface<sup>4</sup>. It can be used to store source code, but it does not provide source control features or update software. E is incorrect because Amazon Elastic Container Service (Amazon ECS) is the AWS service that allows users to run, scale, and secure Docker container applications. It can be used to deploy containerized software, but it does not store source code or update software.

#### NEW QUESTION # 569

Which AWS service requires the customer to be fully responsible for applying operating system patches?

- **A. Amazon EC2**
- B. AWS Fargate
- C. AWS Lambda
- D. Amazon DynamoDB

**Answer: A**

Explanation:

Explanation

Amazon EC2 is the AWS service that requires the customer to be fully responsible for applying operating system patches. Amazon EC2 is a service that provides secure, resizable compute capacity in the cloud. Customers can launch virtual servers called instances and choose from various configurations of CPU, memory, storage, and networking resources<sup>1</sup>. Customers have full control and access to their instances, which means they are also responsible for managing and maintaining them, including applying operating system patches<sup>2</sup>. Customers can use AWS Systems Manager Patch Manager, a feature of AWS Systems Manager, to automate the process of patching their EC2 instances with both security-related updates and other types of updates<sup>3</sup>.

#### NEW QUESTION # 570

A company wants to integrate its online shopping website with social media login credentials. Which AWS service can the company use to make this integration?

- A. AWS Directory Service
- B. AWS IAM Identity Center (AWS Single Sign-On)
- C. AWS Identity and Access Management (IAM)
- **D. Amazon Cognito**

**Answer: D**

Explanation:

Amazon Cognito is a service that enables you to add user sign-up and sign-in features to your web and mobile applications. Amazon Cognito also supports social and enterprise identity federation, which means you can allow your users to sign in with their existing credentials from identity providers such as Google, Facebook, Apple, and Amazon. Amazon Cognito integrates with OpenID Connect (OIDC) and Security Assertion Markup Language (SAML) 2.0 protocols to facilitate the authentication and authorization process. Amazon Cognito also provides advanced security features, such as adaptive authentication, user verification, and multi-factor authentication (MFA). Reference: Amazon Cognito, What is Amazon Cognito?
