

# UiPath UiPath-ADPv1 Reliable Torrent & UiPath-ADPv1 Exam PDF

What's more, part of that DumpExam UiPath-ADPv1 dumps now are free: <https://drive.google.com/open?id=1kqVsng7A2ks4onHKxfB3W1yqimqiSelS>

We are a group of IT experts to provide professional study materials to people preparing UiPath certification exam. There are free demo you can download to check the accuracy of our UiPath-ADPv1 Braindumps. It just needs to take one or two days to practice DumpExam UiPath-ADPv1 dumps torrent and review the key points of our pass guide. Clearing exam is 100% guaranteed.

If you can get the certification for the exam, it not only can prove the ability of you but also can improve your competitive force in the job hunting market. UiPath-ADPv1 exam braindumps are high quality and accuracy, and we can help you pass the exam in your first attempt, otherwise we will give you refund. Moreover, UiPath-ADPv1 test materials contain most of the knowledge points for the exam, and you can pass the exam as well as improve your ability in the process of learning. UiPath-ADPv1 exam materials offer you free update for 365 days after payment, and the update version will be sent to your email automatically.

## 2026 Newest UiPath-ADPv1 Reliable Torrent | UiPath-ADPv1 100% Free Exam PDF

UiPath-ADPv1 also offers free demos, allowing users to test the quality and suitability of the UiPath-ADPv1 exam dumps before purchasing. The demo provides access to a limited portion of the material, providing users with a better understanding of the content. Additionally, UiPath-ADPv1 provides three months of free updates to ensure that candidates have access to the latest questions.

## UiPath (ADPv1) Automation Developer Professional Sample Questions (Q63-Q68):

### NEW QUESTION # 63

Which of the following is an accurate example of using LINQ for querying data in a UiPath process?

- A. Executing LINQ to merge two DataTables by writing: dataTable1.Merge(dataTable2).  
CopyToDataTable()
- B. Using LINQ to filter a list of strings containing only "UiPath" by writing: listOfStrings.Where(Function (x) x = "UiPath").ToList()
- C. Utilizing LINQ to sort DataTable rows based on a specific column by writing: dataTable.OrderBy (Function(x) x.ToString()).CopyToDataTable()
- D. Applying LINQ to find duplicates in a list of integers by writing: listOfIntegers.FindDuplicates().

ToList()

#### Answer: B

Explanation:

LINQ stands for Language-Integrated Query, which is a set of features that allows you to query data from different sources using a common syntax<sup>1</sup>. In UiPath, you can use LINQ to query data from collections, such as lists, arrays, or dictionaries, or from data tables, such as Excel or CSV files<sup>2</sup>.

Option D is an accurate example of using LINQ for querying data in a UiPath process, because it uses the Where method to filter a list of strings based on a condition, and returns the result as a new list. The condition is that the string must be equal to "UiPath", which is specified by the lambda expression Function (x) x = "UiPath". The ToList method converts the query result into a list type<sup>3</sup>. The other options are not accurate examples of using LINQ for querying data in a UiPath process, because they either use methods that are not part of LINQ, or use LINQ for purposes other than querying data. For example:

- \* Option A uses a custom method FindDuplicates, which is not a standard LINQ method, and does not specify a lambda expression to define the query criteria<sup>4</sup>.
- \* Option B uses LINQ to sort data table rows, which is not a querying operation, and does not use the Field method to access the column values<sup>5</sup>.
- \* Option C uses the Merge method, which is a data table method, not a LINQ method, and does not use any query expression at all.

#### NEW QUESTION # 64

What role do Triggers play in the UiPath Integration Service?

- A. Assist in the creation of automation projects by providing event-based activities.
- B. Provide a mechanism for starting processes on a scheduled basis from Orchestrator.
- C. Manage connections between UiPath Studio and third-party applications.
- D. Provide a mechanism for subscribing to specific events from third-party applications, automatically starting processes in Orchestrator.

#### Answer: D

#### NEW QUESTION # 65

When configuring the Max # of retries for the queue in Orchestrator to "1" for your process, and the queue has 5 transaction items. At runtime, the first transaction item throws a Business Rule Exception.

How does the process proceed?

- A. Transaction is not retried and the process stops.
- B. Transaction is retried only one time.
- C. Transaction is not retried but remaining transactions continue processing.
- D. Transaction is retried multiple times until processed successfully.

#### Answer: C

Explanation:

A Business Rule Exception is a type of exception that indicates that the data or the input required for the automation process is incomplete or invalid<sup>1</sup>. For example, a Business Rule Exception can occur when a phone number is missing a digit, or when a mandatory field is left blank<sup>1</sup>. A Business Rule Exception is usually thrown by the developer using the Throw activity, and it is handled by the Set Transaction Status activity, which sets the status of the transaction item to Failed and adds the exception details to the queue item<sup>2</sup>. By default, Orchestrator does not retry transactions that are failed due to Business Rule Exceptions, regardless of the Max # of retries setting for the queue<sup>3</sup>. This is because retrying the transaction does not solve the issue, and there are other better courses of action, such as notifying the human user of the error<sup>1</sup>.

Therefore, if the first transaction item throws a Business Rule Exception, the transaction is not retried, but the remaining transactions continue processing, as long as they do not encounter any other exceptions.

## NEW QUESTION # 66

A developer configured the properties for a Click activity as shown below:

What happens if the activity cannot find its target at runtime?

- A. The next activity is executed after 10 seconds.
- B. The next activity is executed after 10 milliseconds.
- C. An exception is thrown after 10 milliseconds.
- D. An exception is thrown after 10 seconds.

**Answer: D**

Explanation:

The Click activity has a property called TimeoutMS. This property specifies the amount of time (in milliseconds) to wait for the activity to be executed before an error is thrown. In this case, the TimeoutMS property is set to 10000 milliseconds (10 seconds). Therefore, if the activity cannot find its target at runtime, an exception will be thrown after 10 seconds.

## NEW QUESTION # 67

What is the use of job priorities in unattended automations within UiPath Orchestrator?

- A. To sort and organize tasks within a folder.
- B. To determine which processes should be executed first when dealing with multiple jobs.
- C. To create job dependencies that must be completed before new job execution.
- D. To determine machine resource allocation among processes.

**Answer: B**

## NEW QUESTION # 68

.....

It is exceedingly helpful in attaining a suitable job when qualified with UiPath-ADPv1 certification. It is not easy to get the UiPath-ADPv1 certification, while certified with which can greatly impact the future of the candidates. Now, please take UiPath-ADPv1 practice dumps as your study material, you will pass your exam with UiPath-ADPv1 practice materials successfully. UiPath-ADPv1 free demo is available for everyone. Our UiPath-ADPv1 practice dumps are extremely detailed and complete in all key points which will be in the real test. Believe us and you can easily pass by our UiPath-ADPv1 practice dumps.
