Which mitigation strategy must a security engineer recommend to prevent future reoccurrence?

- A. Implement a phishing education campaign.
- B. Implement a more granular port security strategy.
- C. Add a web application firewall.
- D. Configure a SCM precommit hook.

NEW QUESTION # 65

A company recently discovered that a former employee, who left to join a competitor, continued to access and exfiltrate sensitive data over several weeks after leaving. The breach highlighted vulnerabilities in the organization's data security and access management practices. To prevent such incidents in the future, the organization must adopt measures that detect and restrict unauthorized data access and transfer. Which mitigation strategy must be implemented to address the issue?

- A. Implement web application firewall.
- B. Implement data loss prevention strategy.
- C. Upgrade network policy access.
- D. Deploy audit logging and monitoring solution.

Answer: B

Explanation:

A Data Loss Prevention (DLP) strategy directly addresses the problem of unauthorized access and exfiltration of sensitive data. DLP tools monitor, detect, and block suspicious data transfers, ensuring that insiders or former employees cannot copy, email, or upload sensitive information without authorization. This provides the required prevention and control that the scenario calls for.
