Due to extremely high competition, passing the AWS Certified Advanced Networking Specialty Exam (ANS-C01) exam is not easy; however, possible. You can use DumpsQuestion products to pass the ANS-C01 exam on the first attempt. The AWS Certified Advanced Networking Specialty Exam (ANS-C01) practice exam gives you confidence and helps you understand the criteria of the testing authority and pass the AWS Certified Advanced Networking Specialty Exam (ANS-C01) exam on the first attempt. DumpsQuestion ANS-C01 Questions have helped thousands of candidates to achieve their professional dreams.

Achieving the ANS-C01 Certification demonstrates the candidate's expertise in designing and implementing advanced networking solutions on AWS. It also shows that the candidate has a deep understanding of AWS services and how they can be used to create secure, scalable, and highly available networks. AWS Certified Advanced Networking Specialty Exam certification is highly valued by employers who are looking for skilled networking professionals to manage their AWS infrastructure.

## 100% Pass Quiz Marvelous Amazon ANS-C01 Valid Test Test

Our ANS-C01 training materials are regarded as the most excellent practice materials by authority. Our company is dedicated to researching, manufacturing, selling and service of the ANS-C01 study guide. Also, we have our own research center and experts team. So our products can quickly meet the new demands of customers. That is why our ANS-C01 Exam Questions are popular among candidates. we have strong strength to support our ANS-C01 practice engine.

Earning the AWS Certified Advanced Networking Specialty certification can help networking professionals stand out in a competitive job market and demonstrate their expertise in designing and implementing complex networking solutions on AWS. It can also open up new career opportunities and lead to higher salaries.

## Amazon AWS Certified Advanced Networking Specialty Exam Sample Questions (Q100-Q105):

NEW QUESTION # 100

A company is deploying a new application on AWS. The application uses dynamic multicasting.

The company has five VPCs that are all attached to a transit gateway. Amazon EC2 instances in each VPC need to be able to register dynamically to receive a multicast transmission. How should a network engineer configure the AWS resources to meet these requirements?

- A. Create a static source multicast domain within the transit gateway. Associate the VPCs and applicable subnets with the multicast domain. Register the multicast senders' network interface with the multicast domain. Adjust the network ACLs to allow UDP traffic from the source to all receivers and to allow UDP traffic that is sent to the multicast group address.
- B. Create a static source multicast domain within the transit gateway. Associate the VPCs and applicable subnets with the multicast domain. Register the multicast senders' network interface with the multicast domain. Adjust the network ACLs to allow TCP traffic from the source to all receivers and to allow TCP traffic that is sent to the multicast group address.
- C. Create an Internet Group Management Protocol (IGMP) multicast domain within the transit gateway. Associate the VPCs and applicable subnets with the multicast domain. Register the multicast senders' network interface with the multicast domain. Adjust the network ACLs to allow TCP traffic from the source to all receivers and to allow TCP traffic that is sent to the multicast group address.
- **D. Create an Internet Group Management Protocol (IGMP) multicast domain within the transit gateway. Associate the VPCs and applicable subnets with the multicast domain. Register the multicast senders' network interface with the multicast domain. Adjust the network ACLs to allow UDP traffic from the source to all receivers and to allow UDP traffic that is sent to the multicast group address.**

**Answer: D**

Explanation:

<https://docs.aws.amazon.com/vpc/latest/tgw/how-multicast-works.html>

<https://docs.aws.amazon.com/vpc/latest/tgw/working-with-multicast.html#multicast-configurations-igmp>

#### NEW QUESTION # 101

AWS CloudTrail can be configured to \_\_\_\_ log files across multiple accounts and regions so that log files are delivered to a single bucket.

Response:

- A. replicate
- **B. aggregate**
- C. disperse
- D. encrypt

**Answer: B**

#### NEW QUESTION # 102

A customer has set up multiple VPCs for Dev, Test, Prod, and Management. You need to set up AWS Direct Connect to enable data flow from on-premises to each VPC. The customer has monitoring software running in the Management VPC that collects metrics from the instances in all the other VPCs. Due to budget requirements, data transfer charges should be kept at minimum. Which design should be recommended?

- **A. Create a total of four private VIFs, and enable VPC peering between all VPCs.**
- B. Create a private VIF to the Management VPC, and peer this VPC to all other VPCs, enable source/destination NAT in the Management VPC.
- C. Create a private VIF to the Management VPC, and peer this VPC to all other VPCs.
- D. Create a total of four private VIFs, one for each VPC owned by the customer, and route traffic between VPCs using the Direct Connect link.

**Answer: A**

Explanation:

-creating VPC peering is free of charge -traffic costs ~0.01/GB for VPC peering (IN + OUT) and

~0.02/GB for direct connect (OUT only). As the communication involved in monitoring will never have IN = OUT, then 0.01 \* (IN + OUT) will always be lower than 0.02 \* OUT, ergo VPC peering will be cheaper

### NEW QUESTION # 103

You manage a web service that is used by client applications deployed in 300 offices worldwide. The web service architecture is an Elastic Load balancer (ELB) distributing traffic across four application servers deployed in an autoscaling group across two availability zones.

The ELB is configured to use round robin, and sticky sessions are disabled. You have configured the NACLs and Security Groups to allow port 22 from your bastion host, and port 80 from 0.0.0.0/0. The client configuration is managed by each regional IT team. Upon inspection you find that a large amount of requests from incorrectly configured sites are causing a single application server to degrade. The remainder of the requests are equally distributed across all servers with no negative effects.

What should you do to remedy the situation and prevent future occurrences?

Response:

- A. Update the Security Groups to only allow port 80 to the application servers from the ELB.
- B. Mark the affected instance as degraded in the ELB and raise it with the client application team.
- C. Terminate the affected instance and allow Auto Scaling to create a new instance.
- D. Update the NACL to only allow port 80 to the application servers from the ELB servers.

Answer: A

### NEW QUESTION # 104

A company is planning to use Amazon S3 to archive financial data

a. The data is currently stored in an on-premises data center. The company uses AWS Direct Connect with a Direct Connect gateway and a transit gateway to connect to the on-premises data center. The data cannot be transported over the public internet and must be encrypted in transit.

Which solution will meet these requirements?

- A. Create an IPsec VPN connection over the transit VIF. Create a VPC and attach the VPC to the transit gateway. In the VPC, provision an interface VPC endpoint for Amazon S3. Use HTTPS for communication.
- B. Create a Direct Connect public VIF. Set up an IPsec VPN connection over the public VIF to the transit gateway. Create an attachment for Amazon S3. Use HTTPS for communication.
- C. Create a VPC and attach the VPC to the transit gateway. In the VPC, provision an interface VPC endpoint for Amazon S3. Use HTTPS for communication.
- D. Create a Direct Connect public VIF. Set up an IPsec VPN connection over the public VIF to access Amazon S3. Use HTTPS for communication.

Answer: A
