

Exam F5CAB1 PDF & F5CAB1 Pass4sure

P.S. Free & New F5CAB1 dumps are available on Google Drive shared by Actual4Labs: <https://drive.google.com/open?id=1rNHskEkbb1GeMYCzww7OnkEvZFpWB0eh>

If you are really intended to pass and become F5 F5CAB1 exam certified then enrolled in our preparation program today and avail the intelligently designed actual questions. Actual4Labs is the best platform, which offers braindumps for F5CAB1 Certification exam duly prepared by experts. Our F5CAB1 Exam Material is good to F5CAB1 pass exam in a week. Now you can become F5CAB1 certified professional with Dumps preparation material. Our F5CAB1 exam dumps are efficient, which our dedicated team keeps up-to-date.

Actual4Labs is admired by all our customers for our experts' familiarity and dedication with the industry all these years. By their help, you can qualify yourself with high-quality F5CAB1 exam materials. Our experts pass onto the exam candidate their know-how of coping with the F5CAB1 Exam by our F5CAB1 practice questions. Exam candidates are susceptible to the influence of ads, so our experts' know-how is impressive to pass the F5CAB1 exam instead of making financial reward solely.

F5CAB1 Pass4sure, Valid F5CAB1 Dumps

The easy to learn format of these amazing F5CAB1 exam questions will prove one of the most exciting exam preparation experiences of your life! When you are visiting on our website, you can find that every button is easy to use and has a swift response. And there are three varied versions of our F5CAB1 learning guide: the PDF, Software and APP online. Every version of our F5CAB1 simulating exam is auto installed if you buy and study with them. They are perfect in every detail.

F5 F5CAB1 Exam Syllabus Topics:

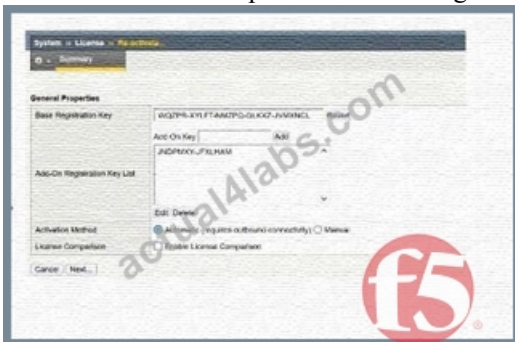

Topic	Details

Topic 1	<ul style="list-style-type: none"> • BIG IP Administration Control Plane Administration: This section of the exam measures skills of System Administrators and covers managing the control plane where BIG IP is configured and administered. It includes working with user accounts, roles, device settings, configuration management, and using the graphical interface and command line for daily administrative tasks.
Topic 2	<ul style="list-style-type: none"> • BIG IP Administration Support and Troubleshooting: This section of the exam measures skills of Network Administrators and covers identifying and resolving common issues that affect BIG IP operation. It focuses on using logs, statistics, diagnostic tools, and basic troubleshooting methods to restore normal traffic flow and maintain stable application delivery.
Topic 3	<ul style="list-style-type: none"> • BIG IP Administration Install Initial Configuration and Upgrade: This section of the exam measures skills of System Administrators and covers the lifecycle tasks for deploying and maintaining a BIG IP system. It includes installing the platform, performing initial setup, applying licenses, configuring basic networking, and planning and executing software upgrades and hotfixes.
Topic 4	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Concepts: This section of the exam measures skills of Network Administrators and covers how BIG IP handles application traffic on the data plane. It includes understanding flow of traffic, key data path components, basic concepts of load balancing, and how security and performance features affect user traffic.
Topic 5	<ul style="list-style-type: none"> • BIG IP Administration Data Plane Configuration: This section of the exam measures skills of System Administrators and covers configuring BIG IP objects that control data plane behavior. It focuses on setting up virtual servers, pools, nodes, monitors, and profiles so that applications are delivered reliably and efficiently according to design requirements.

F5 BIG-IP Administration Install, Initial Configuration, and Upgrade Sample Questions (Q44-Q49):

NEW QUESTION # 44

An administrator is in the process of reactivating the license using the interface displayed in the exhibit.

What is the address of the license server to which the BIG-IP device must be able to establish an outbound connection in order to use the Automatic Activation Method?

- A. license.f5.com
- B. activate.f5.com
- C. ask.f5.com
- D. callhome.f5.com

Answer: B

Explanation:

When you choose Automatic as the activation method in the License, Re-activate screen, the BIG-IP device itself contacts F5's license activation service over the Internet.

For successful automatic activation:

- * The BIG-IP must have outbound network connectivity (typically via the management interface).
- * DNS resolution and routing must allow it to reach the F5 license activation host (the one shown in option D).
- * The device sends its dossier and registration key to that service and receives an updated license file in return, which is then installed automatically.

The other hostnames in the options are not used by BIG-IP for license activation, so they cannot be correct in the context of Automatic Activation.

NEW QUESTION # 45

Which of the following are resource allocation (provisioning) settings for BIG-IP modules?
(Choose two.)

- A. Limited
- B. Maximum
- C. Nominal
- D. Dedicated

Answer: C,D

Explanation:

BIG-IP module provisioning determines how CPU, memory, and disk resources are allocated to each licensed module. F5 defines a specific set of supported provisioning levels.

Valid provisioning (resource allocation) settings

Nominal

- * Allocates a standard, balanced amount of system resources to a module.
- * Intended for typical production deployments where multiple modules may be provisioned at the same time.

Dedicated

- * Allocates all available system resources to a single module.
- * Used when the BIG-IP device is dedicated to running only one module (for example, ASM-only or APM-only deployments).
- * No other modules can be provisioned when one is set to Dedicated.

These two options are valid and supported provisioning levels.

Why the other options are incorrect

Maximum

- * This is not a valid BIG-IP provisioning level.
- * BIG-IP does not use "Maximum" as a resource allocation setting.

Limited

- * This is also not a supported provisioning level.
- * BIG-IP uses levels such as None, Minimal, Nominal, and Dedicated (module-dependent), not Limited.

NEW QUESTION # 46

When using the tmsh shell of a BIG-IP system, which command will display the management-ip address?

- A. list /sys management-ip
- B. run /util bash ifconfig mgmt
- C. show /sys management-ip

Answer: A

Explanation:

Comprehensive and Detailed Explanation (Paraphrased from F5 BIG-IP Administration / Installation / Initial Configuration concepts)

Within the BIG-IP Traffic Management Shell (tmsh), system configuration objects—including the management IP—are organized under the /sys hierarchy. The management IP address is a configurable property stored in the system configuration and can be viewed using the tmsh list command, which displays configuration objects and their currently assigned values.

Why "list /sys management-ip" is correct

- * The list command in tmsh is used to display configured system values, not runtime statistics.
- * The object that holds the management IP settings on BIG-IP systems is located at /sys management-ip
- * Running the command: list /sys management-ip will reveal the settings for the management IP interface, including the address, netmask, and any associated attributes.
- * This is the standard method used during system setup and verification to confirm the management IP configuration.

This behavior aligns with BIG-IP administration procedures, where configuration information is retrieved using list, while operational data is retrieved using show.

Why the other options are incorrect

A). run /util bash ifconfig mgmt

- * This command enters the Bash shell, then runs ifconfig to display the management interface.

- * While this can show the management interface address, it is not a tmsh-native command, and the question specifically asks for a tmsh command.
- * Administrators use tmsh directly for configuration display rather than leaving the shell.
- C). show /sys management-ip
- * The show command displays statistics or operational data, not configuration values.
- * The management-ip object does not maintain statistics; therefore show does not return the configuration details required.
- * Only the list command reveals stored configuration data such as IP address and netmask.

NEW QUESTION # 47

How should a BIG-IP Administrator check the provisioned CPU percent for a module?
(Choose two.)

- A. By going to System > Resource Provisioning and hovering over the CPU section colors.
- B. By checking the Dashboard output in the Statistics tab in the GUI.
- C. By running tmsh show /sys provision and reviewing the specific module in the output.
- D. By running the top command and reviewing the output for the provisioned module.
- E. By running tmsh show /sys cpu and reviewing the specific module provisioned output.

Answer: A,C

Explanation:

BIG-IP allocates CPU and memory resources based on module provisioning levels.

To view how much CPU a module is assigned, administrators must check provisioning information from:

C). GUI - System > Resource Provisioning

This page visually displays CPU allocation via color-coded bars.

Hovering over the CPU bar shows:

- * CPU usage percent per module
- * Which modules share CPU cycles
- * The system's total resource allocation

This is the primary GUI method.

D). tmsh show /sys provision

This command displays detailed module provisioning information including:

- * Provisioned modules
- * Their provisioning level
- * CPU and memory allocation data

It is the authoritative CLI method for resource provisioning status.

Why the other options are incorrect:

A). top

* Shows real-time process usage, not provisioned CPU allocation.

B). tmsh show /sys cpu

* Displays CPU runtime utilization, not per-module provisioning.

E). Statistics Dashboard

* Only shows traffic / system runtime metrics, not provisioning resource allocations.

Therefore, C and D are correct.

NEW QUESTION # 48

An F5 VE has been deployed into a VMware environment via an OVF file.

An administrator wants to configure the management IP address so the VE can be accessed for further setup.

Which two are valid methods for configuring the management-ip address? (Choose two.)

- A. Log into the remote console and configure the management IP by running the setup command.
- B. Log into the remote console and configure the management IP through TMSH using:
create ltm management-ip <ip address>/<mask>
- C. Log into the remote console and configure the management IP through TMSH using:
create sys management-ip <ip address>/<mask>
- D. Log into the remote console and configure the management IP by running the config executable.

Answer: C,D

Explanation:

A newly deployed BIG-IP Virtual Edition (VE) in VMware requires initial configuration of its management- ipaddress so it can be accessed over the network. F5 provides several valid mechanisms during initial console access:

A). Running the config utility

- * The config script is available on new BIG-IP installations and VE deployments.
- * It launches a guided text-based wizard allowing configuration of:
 - * Management IP
 - * Netmask
 - * Default route
- * This is a standard and recommended method during first-time setup.

B). Using TMSH with create sys management-ip

- * Administrators can enter TMSH directly from the console and run:
 - * create sys management-ip <ip>/<mask>
 - * The management-ip object resides under sys, not under ltm or any other module.
 - * This is the correct tmsH method for defining the management interface address.

Why the other options are incorrect:

C). create ltm management-ip

- * There is no such object under /ltm.
- * LTM handles traffic objects (virtual servers, pools), not system management interfaces.

D). Running the setup command

- * The setup command is used for general system configuration but does not configure the management- ip.
- * It is not the supported method for initial management IP assignment on VE deployments.

Therefore, the valid methods are running the config utility and using the sys management-ip command within TMSH.

NEW QUESTION # 49

.....

We have brought in an experienced team of experts to develop our F5CAB1 study materials, which are close to the exam syllabus. With the help of our F5CAB1 study materials, you don't have to search all kinds of data, because our products are enough to meet your needs. You also don't have to spend all your energy to the exam because our F5CAB1 Study Materials are very efficient. Only should you spend a little time practicing them can you pass the exam successfully.
