APMG-International ISO-IEC-27001-Foundation exam preparation and boost your confidence to pass the ISO-IEC-27001-Foundation Exam. All APMG-International ISO-IEC-27001-Foundation exam practice test questions contain the real and updated APMG-International ISO-IEC-27001-Foundation exam practice test questions.

APMG-International ISO/IEC 27001 (2022) Foundation Exam Sample Questions (Q32-Q37):

NEW QUESTION # 32

Identify the missing word in the following sentence.

The organization shall determine the [?] of interested parties relevant to information security.

- A. number
- B. structure
- C. influence
- D. requirements

Answer: D

Explanation:

Clause 4.2 of ISO/IEC 27001:2022 states:

"The organization shall determine: a) interested parties that are relevant to the information security management system; b) the relevant requirements of these interested parties; c) which of these requirements will be addressed through the ISMS." This confirms that the missing word is requirements. Neither number, structure, nor influence are specified in the standard.

NEW QUESTION # 33

Identify the missing words in the following sentence.

The organization shall establish, implement, maintain and [?] an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document.

- A. report on
- B. continually improve
- C. communicate the importance of
- D. enforce standards for

Answer: B

Explanation:

Clause 4.4 of ISO/IEC 27001:2022 states:

"The organization shall establish, implement, maintain and continually improve an information security management system, including the processes needed and their interactions, in accordance with the requirements of this document." This requirement highlights that

an ISMS is not static; it must evolve continuously to adapt to new risks, technologies, and business changes. Options A, C, and D are not mentioned in the clause. The continual improvement cycle is central to ISO standards, aligning with the Plan-Do-Check-Act (PDCA) model.

Thus, the missing words are "continually improve."

NEW QUESTION # 34

Which action must top management take to provide evidence of its commitment to the establishment, operation and improvement of the ISMS?

- A. Implementing the actions from internal audits
- B. Producing a risk assessment report
- **C. Ensuring information security objectives are established**
- D. Communicating feedback from interested parties to the organization

Answer: C

Explanation:

Clause 5.1 (Leadership and Commitment) requires top management to demonstrate leadership by:

* "ensuring the information security policy and the information security objectives are established and are compatible with the strategic direction of the organization;"

* "ensuring the integration of the ISMS requirements into the organization's processes;"

* "ensuring that the resources needed for the ISMS are available;"

Among the options, the one explicitly mandated is ensuring that information security objectives are established. Risk assessments (C) and implementing audit actions (D) are responsibilities of management but not the direct leadership evidence required in Clause 5.1. Communicating interested party feedback (A) is relevant but not specifically cited as leadership evidence. Thus, the verified answer is B.

NEW QUESTION # 35

Which statement describes the Classification of information control in Annex A of ISO/IEC 27001?

- A. Ensures the rules to control physical and logical access apply to assets
- B. Ensures that all information assets are labelled with their classification
- **C. Ensures that information is classified based on confidentiality, integrity and availability**
- D. Ensures that security perimeters are used to protect assets

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract ISO/IEC 27002:2022 standards:

Annex A.5.12 (Classification of information) states:

"Information should be classified according to the information security needs of the organization based on confidentiality, integrity and availability." This aligns directly with option B. Option A (labelling) is a separate control (Annex A.5.13). Option C (security perimeters) is under physical controls (Annex A.7.1). Option D (access control rules) relates to Annex A.5.15 and A.8.2. Thus, the verified correct statement for the Classification of information control is B.

NEW QUESTION # 36

Which item is required to be defined when planning the organization's risk assessment process?

- **A. The criteria for acceptable levels of risk**
- B. The parts of the ISMS scope which are excluded from the risk assessment
- C. There are NO specific information requirements
- D. How the effectiveness of the method will be measured

Answer: A

Explanation:

Clause 6.1.2 (Information security risk assessment) requires organizations to "define and apply an information security risk assessment process that... establishes and maintains information security risk criteria, including criteria for accepting risk." This means

that acceptable levels of risk (risk acceptance criteria) must be explicitly defined. These criteria ensure consistent decision-making when evaluating whether identified risks need further treatment or can be tolerated.

Option A is incorrect because exclusions relate to the ISMS scope (Clause 4.3), not risk assessment planning.

Option B is not a requirement; effectiveness of risk assessment methods is not required to be measured, though methods must be applied consistently. Option D is false—the standard clearly specifies required elements for risk assessment.

Thus, the correct answer is C: The criteria for acceptable levels of risk.

NEW QUESTION # 37

Participation in the APMG-International community is a helpful way to discuss ISO-IEC-27001-Foundation exam topics with other APMG-International ISO-IEC-27001-Foundation exam applicants and experts. The official website of the ISO-IEC-27001-Foundation exam has other different learning resources.
