Authorized Data-Architect Exam Dumps, Data-Architect Reliable Exam Braindumps

Our Data-Architect study materials selected the most professional team to ensure that the quality of the Data-Architect learning guide is absolutely leading in the industry, and it has a perfect service system. The focus and seriousness of our study materials gives it a 99% pass rate. Using our products, you can get everything you want, including your most important pass rate. Data-Architect Actual Exam is really a good helper on your dream road.

Salesforce Certified Data Architect Sample Questions (Q41-Q46):

NEW QUESTION # 41

Universal Containers (UC) has several custom Visualforce applications have been developed in which users are able to edit

Opportunity records. UC struggles with data completeness on their Opportunity records and has decided to make certain fields required that have not been in the past. The newly required fields are dependent on the Stage of the Opportunity, such that certain fields are only required once an Opportunity advances to later stages. There are two fields. What is the simplest approach to handle this new requirement?

- **A. Use a validation rule for each field that takes the Stage into consideration.**
- B. Update these Opportunity field definitions in Setup to be required.
- C. Update the Opportunity page layout to mark these fields as required.
- D. Write an Apex trigger that checks each field when records are saved.

Answer: A

Explanation:

Using a validation rule for each field that takes the Stage into consideration is the simplest approach to handle this new requirement. A validation rule can enforce the field requirements based on the logic and criteria that you define, and display an error message when users try to save a record that does not meet the requirements. Updating the Opportunity page layout to mark these fields as required will not work because page layouts do not support conditional field requirements. Updating these Opportunity field definitions in Setup to be required will not work because it will apply to all stages and records. Writing an Apex trigger that checks each field when records are saved is not the simplest approach because it requires coding and testing

NEW QUESTION # 42

Northern Trail Outfitters (NTO) wants to start a loyalty program to reward repeat customers. The program will track every item a customer has bought and grants them points for discounts. The following conditions will exist upon implementation:

Data will be used to drive marketing and product development initiatives.

NTO estimates that the program will generate 100 million rows of data monthly.

NTO will use Salesforce's Einstein Analytics and Discovery to leverage their data and make business and marketing decisions.

What should the Data Architect do to store, collect, and use the reward program data?

- A. Create a custom big object in Salesforce which will be used to capture the Reward Program data for consumption by Einstein.
- B. Create a custom object in Salesforce that will be used to capture the Reward Program data.
- C. Create a big object in Einstein Analytics to capture the Loyalty Program data.
- **D. Have Einstein connect to the point of sales system to capture the Reward Program data.**

Answer: D

NEW QUESTION # 43

What 2 data management policies does the data classification feature allow customers to classify in salesforce?

Choose 2 answers:

- A. Reference data policy.
- B. Data governance policy.
- **C. Compliance categorization policy.**
- **D. Data sensitivity level**

Answer: C,D

Explanation:

The data classification feature allows customers to classify their data in Salesforce based on two policies:

Data sensitivity level: This policy defines how sensitive the data is and what level of protection it requires. For example, high sensitivity data may require encryption or masking.

Compliance categorization policy: This policy defines how the data is regulated by various laws and standards. For example, GDPR or PCI DSS.

NEW QUESTION # 44

An architect has been asked by a client to develop a solution that will integrate data and resolve duplicates and discrepancies between Salesforce and one or more external systems. What two factors should the architect take into consideration when deciding whether or not to use a Master Data Management system to achieve this solution?

Choose 2 answers

- A. Whether the systems are cloud -based or on -premise.
- **B. Whether the system of record changes for different tables.**
- C. Whether or not Salesforce replaced a legacy CRM.
- **D. The number of systems that are integrating with each other.**

Answer: B,D

Explanation:

Whether the system of record changes for different tables and the number of systems that are integrating with each other are two factors that the architect should take into consideration when deciding whether or not to use a Master Data Management system to achieve the solution of integrating data and resolving duplicates and discrepancies between Salesforce and one or more external systems. The system of record is the authoritative source of truth for a given entity or field in a given context. If different systems have different systems of record for different tables, then a Master Data Management system can help to manage and synchronize the data across systems and ensure data quality and consistency. The number of systems that are integrating with each other is another factor that affects the complexity and scalability of the integration solution. If there are many systems that need to integrate with each other, then a Master Data Management system can provide a centralized and standardized way of integrating data and resolving duplicates and discrepancies across systems. The other factors are not relevant or important for deciding whether or not to use a Master Data Management system, as they do not affect the data quality or integration challenges that a Master Data Management system can address.

NEW QUESTION # 45

Universal Containers (UC) manages Vehicle and Service History in Salesforce. Vehicle (Vehicle__c) and Service History (ServiceHistory__c) are both custom objects related through a lookup relationship.

Every week a batch synchronization process updates the Vehicle and Service History records in Salesforce. UC has two hours of migration window every week and is facing locking issues as part of the data migration process.

What should a data architect recommend to avoid locking issues without affecting performance of data migration?

- A. Insert the order in another custom object and use Batch Apex to move the records to Service_Order__c object.
- **B. Use Bulk API serial mode for data migration**
- C. Use Bulk API parallel mode for data migration
- D. Change the lookup configuration to "Clear the value of this field" when lookup record is deleted.

Answer: B

Explanation:

According to the official Salesforce guide¹, using Bulk API serial mode for data migration can help avoid locking issues by processing batches in a single thread. This mode ensures that batches are processed in the order they are received and that only one batch is processed at a time. This reduces the risk of lock contention and deadlocks, especially when updating parent and child records in a lookup relationship. Option B is the correct answer because it suggests using Bulk API serial mode for data migration. Option A is incorrect because using Bulk API parallel mode for data migration can cause locking issues by processing batches in multiple threads. This mode does not guarantee the order of batch processing and can result in concurrent updates to the same records, which can lead to lock contention and deadlocks. Option C is incorrect because inserting the order in another custom object and using Batch Apex to move the records to Service_Order__c object adds unnecessary complexity and overhead to the data migration process. Option D is incorrect because changing the lookup configuration to "Clear the value of this field" when lookup record is deleted does not address the locking issues caused by data migration, but rather by record deletion.

NEW QUESTION # 46

.....

Our PDF version of the Data-Architect learning braindumps can print on papers and make notes. Then windows software of the Data-Architect exam questions, which needs to install on windows software. Also, the windows software is intelligent to simulate the real test environment. Then the online engine of the Data-Architect Study Materials, which is convenient for you because it doesn't need to install on computers. It supports Windows, Mac, Android, iOS and so on. This version just can run on web browser.
