If you indeed fail the exam, money back will be guaranteed.

Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q33-Q38):

NEW QUESTION # 33

What is one influence on Solution and PI Roadmaps?

- A. ART capacity
- B. Value Streams
- C. Market dynamics
- D. Customer-centric Features

Answer: C

Explanation:

Explanation

Market dynamics are one of the influences on Solution and PI Roadmaps, which are visual tools that forecast and communicate the planned deliverables, milestones, and investments over a time horizon¹². Market dynamics are the external factors that affect the demand and supply of a product or service in the market, such as customer needs, competitor actions, regulatory changes, technological trends, and economic conditions³.

Market dynamics influence Solution and PI Roadmaps in the following ways:

*They help identify the market problems or opportunities that the solution aims to address or capture¹².

*They help prioritize the features and capabilities that deliver the most value to the customers and stakeholders¹².

*They help align the solution delivery with the market rhythms and events, which are the periodic or one-time occurrences that have a significant impact on the solution adoption or performance¹².

*They help validate the assumptions and hypotheses about the customer and the solution through feedback and learning¹².

Some additional information that might be helpful for you are:

*The other options (A, B, and D) are not influences on Solution and PI Roadmaps, but rather elements or outcomes of the roadmaps.

*Value Streams are the primary constructs for understanding, organizing, and delivering value to the customer.

Value Streams are the basis for defining the solution vision, strategy, and roadmap⁴.

*Customer-centric Features are the work items that represent the benefits or outcomes that the solution provides to the customer or user. Customer-centric Features are the main content of the Solution and PI Roadmaps⁵.

*ART capacity is the amount of work that an Agile Release Train (ART) can handle in a Program Increment (PI). ART capacity is a factor that determines the feasibility and scope of the Solution and PI Roadmaps.

NEW QUESTION # 34

Which Product Owner responsibility supports the team with value delivery?

- A. Understanding market forces
- B. Supporting the Architectural Runway
- C. Fostering Built-in Quality
- D. Testing benefit hypotheses

Answer: C

Explanation:

Fostering Built-in Quality is a Product Owner responsibility that supports the team with value delivery. Built-in Quality is one of the four core values of SAFe and it means that every aspect of the solution is continuously verified for quality¹. The Product Owner fosters Built-in Quality in the following ways:

* Collaborating with the Development team and other stakeholders to define clear and testable acceptance criteria for each work item².

* Participating in team events such as Iteration Planning, Backlog Refinement, and Iteration Review to provide feedback and guidance on the quality of the work².

* Reviewing and approving the work items that meet the Definition of Done and the acceptance criteria².

* Encouraging the team to apply Agile testing practices such as Test-First, Test-Driven Development, and Behavior-Driven Development³.

* Supporting the team's continuous integration and continuous delivery practices to ensure fast and frequent feedback on the quality of the solution³.

Some additional information that might be helpful for you are:

* The other options (A, B, and C) are not Product Owner responsibilities that support the team with value delivery, but rather

responsibilities that belong to other roles or activities.

* Understanding market forces is a responsibility of Product Management, who is accountable for the market and business aspects of the solution⁴.

* Supporting the Architectural Runway is a responsibility of System Architects/Engineers, who provide technical guidance and enablement to the teams.

* Testing benefit hypotheses is an activity that occurs in the Continuous Exploration step of the Continuous Delivery Pipeline, where Product Owners and Product Managers collaborate to validate their assumptions about the customer and the solution.

NEW QUESTION # 35

What is one step when determining initial team capacity during PI Planning?

- A. Subtract one point for every team member's vacation day, public holiday, or training day
- B. Ensure Product Owner/Product Manager approval for all time-based capacity adjustments
- C. Compare final team capacity across all teams
- D. Add together all of the points from recently completed Features

Answer: A

Explanation:

Explanation

One step when determining initial team capacity during PI Planning is to subtract one point for every team member's vacation day, public holiday, or training day. This step helps the team to adjust their capacity based on the actual availability of each team member for the upcoming Program Increment (PI)¹. By accounting for the time-based capacity adjustments, the team can plan their work more realistically and avoid overcommitting or underdelivering².

NEW QUESTION # 36

Which is developed by teams and rolled up to the ART level during PI Planning?

- A. Risks
- B. Objectives
- C. Dependencies
- D. Milestones

Answer: B

Explanation:

Explanation

Objectives are developed by teams and rolled up to the ART level during PI Planning. Objectives are a summary of the business and technical goals that the teams and the ART intend to achieve in the upcoming Program Increment (PI)¹. During PI Planning, each team creates their own team PI objectives, which are then presented and reviewed by the ART and the stakeholders². The aggregated team PI objectives form the ART PI objectives, which provide a common vision and alignment for the ART³.

NEW QUESTION # 37

What is one tool that visualizes Features representing a workflow?

- A. Continuous Delivery Pipeline
- B. User Experience Design
- C. Team Kanban
- D. Story Maps

Answer: D

Explanation:

Explanation

A story map is a tool that visualizes features representing a workflow. A story map is a two-dimensional arrangement of user stories that shows the relationship between the user activities and the features that support them. A story map helps the team to understand the user journey, prioritize the features based on value and dependencies, and plan the releases and iterations.
