Our company boasts top-ranking expert team, professional personnel and specialized online customer service personnel. Our experts refer to the popular trend among the industry and the real exam papers and they research and produce the detailed information about the CCDAK study materials. They constantly use their industry experiences to provide the precise logic verification. The CCDAK Study Materials are compiled with the highest standard of technology accuracy and developed by the certified experts and the published authors only.

The CCDAK certification exam is an online, proctored exam that consists of multiple-choice questions and hands-on exercises. CCDAK exam is designed to be challenging, but fair, and is intended to test the knowledge and skills of developers who have experience working with Kafka. CCDAK exam is available to anyone who meets the prerequisites, which include experience working with Kafka and a solid understanding of distributed systems and programming concepts. The CCDAK certification exam is an excellent way for developers to demonstrate their expertise in Kafka and differentiate themselves in a competitive job market.

The CCDAK Exam is ideal for Kafka developers who are passionate about this technology and looking for new challenges. Kafka developers who pass the exam can differentiate themselves from other developers and obtain recognition as experts in Kafka-based solutions. Confluent Certified Developer for Apache Kafka Certification Examination certification can enable developers to gain new career opportunities and increase their salary. The CCDAK exam helps organizations looking for qualified Kafka professionals identify the right candidates for their projects.

CCDAK Valid Exam Papers | CCDAK Advanced Testing Engine

So this reduces your chance of failure in the actual CCDAK Exam. It requires no special plugins to function properly. So just start your journey with Exam4Tests and prepare for the CCDAK exam instantly.

Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q22-Q27):

NEW QUESTION # 22

A Kafka cluster has four brokers with a topic t1 with eight partitions. A client application has just one broker specified in the bootstrap URL.

Brokers:

b1.host.domain.com

b2.host.domain.com

b3.host.domain.com

b4.host.domain.com

Bootstrap URL:

b2.host.domain.com

What would be the impact of such configuration?

- A. Consumers and producers will not be able to consume or produce any messages.
- B. Consumers and producers will get NotEnoughReplicasException.
- C. Consumers and producers will only be able to consume and produce from partitions on broker b2.
- **D. Consumers and producers will work as expected as long as broker b2 is available.**

Answer: D

NEW QUESTION # 23

A producer is sending messages with null key to a topic with 6 partitions using the DefaultPartitioner. Where will the messages be stored?

- A. Partition 0
- B. The partition for the null key
- C. Any of the topic partitions
- **D. Partition 5**

Answer: D

Explanation:

Message with no keys will be stored with round-robin strategy among partitions.

NEW QUESTION # 24

What isn't an internal Kafka Connect topic?

- **A. connect-jars**
- B. connect-offsets
- C. connect-configs
- D. connect-status

Answer: A

Explanation:

connect-configs stores configurations, connect-status helps to elect leaders for connect, and connect-offsets store source offsets for

source connectors

NEW QUESTION # 25

A client connects to a broker in the cluster and sends a fetch request for a partition in a topic. It gets an exception Not Leader For Partition Exception in the response. How does client handle this situation?

- A. Get the Broker id from Zookeeper that is hosting the leader replica and send request to it
- B. Send metadata request to Zookeeper for the topic and select the broker hosting the leader replica
- C. Send fetch request to each Broker in the cluster
- D. Send metadata request to the same broker for the topic and select the broker hosting the leader replica

Answer: D

Explanation:

In case the consumer has the wrong leader of a partition, it will issue a metadata request. The Metadata request can be handled by any node, so clients know afterwards which broker are the designated leader for the topic partitions. Produce and consume requests can only be sent to the node hosting partition leader.

NEW QUESTION # 26

You need to correctly join data from two Kafka topics.

What will allow for the co-partitioning? (Choose 2.)

- A. Both topics have the same number of partitions.
- B. Both topics have the same retention time.
- C. Both topics have the same key and partitioning strategy.
- D. Both topics have the same value schema.

Answer: A,C

NEW QUESTION # 27

.....
