

# SAP Latest C-S43-2601 Real Test: SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) - DumpsReview Help you Pass

DumpsReview's SAP C-S43-2601 exam training materials' simulation is particularly high. You can encounter the same questions in the real exam. This only shows that the ability of our IT elite team is really high. Now many ambitious IT staff to make their own configuration files compatible with the market demand, to realize their ideals through these hot IT exam certification. Achieved excellent results in the SAP C-S43-2601 Exam. With the SAP C-S43-2601 exam training of DumpsReview, the door of the dream will open for you.

Maybe you are busy with working every day without the help of our C-S43-2601 learning materials. The heavy work leaves you with no time to attend to study. It doesn't matter. Our C-S43-2601 learning materials can help you squeeze your time out and allow you to improve your knowledge and skills while having work experience. And there are three versions of our C-S43-2601 Exam Questions for you to choose according to your interests and hobbies.

## Free PDF Quiz 2026 The Best SAP C-S43-2601: Latest SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Real Test

Workers and students today all strive to be qualified to keep up with dynamically changing world with C-S43-2601 exam. In doing so, they often need practice materials like our C-S43-2601 exam materials to conquer exam or tests in their profession. Without amateur materials to waste away your precious time, all content of C-S43-2601 practice materials are written for your exam based on the real exam specially. So our C-S43-2601 study guide can be your best choice.

## SAP Certified Implementation Consultant - SAP S/4HANA Cloud Private Edition, Asset Management (C\_S43\_2601) Sample Questions (Q11-Q16):

### NEW QUESTION # 11

Use Phase-Based Maintenance Processing

The project team evaluates during the implementation project Phase-Based Maintenance Processing in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Initiate and screen a Maintenance Notification
- \* Plan Maintenance Order and send it for approval
- \* Create a Maintenance Notification using an already available notification type which is suitable for phase-based maintenance and save it.

Use the following data:

Field	Value
Technical Object	T-PB##
Current Location	Production Line 1
Detection Method	Continuous Condition Monitoring
Operational Effect	Production restricted
Description	Defective pump (phase-based)

\* Screen and accept the just created Maintenance Notification.

\* Create an Order (Phase-based) for your accepted notification and submit it for approval.

Use the following data:

Field	Value
Technical Object	T-PB##
Operation 0010 - Description	Repair damage
Operation 0010 - Work	2 h

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 10 Overview

This task evaluates your ability to manage the newer, phase-led maintenance workflow in SAP S/4HANA.

Unlike the traditional "emergency" repair you did earlier, this process includes formal screening and approval steps Step 1: Create a Phase-Based Maintenance Notification In this step, you initiate the request.

\* Access the Transaction : Use transaction IW21 or the Fiori app Create Maintenance Request .

\* Select Notification Type : Use a type configured for phase-based maintenance (typically Y1 - Maintenance Request ).

\* Enter the Following Data :

\* Technical Object : T-PB48

\* Description : Defective pump (phase-based)

\* Current Location : Production Line 1

\* Detection Method : Continuous Condition Monitoring

\* Operational Effect : Production restricted

\* Save : Note the notification number generated.

Explanation : This step "initiates" the maintenance process. In phase-based maintenance, the notification starts in the Initiation phase, where it must be reviewed before any work is planned.

Step 2: Screen and Accept the Notification

As a "Maintenance Coordinator," you must now review the request.

\* Access the Fiori App : Open Screen Maintenance Requests .

\* Locate Your Notification : Find the notification you just created for T-PB48.

\* Perform Screening :

\* Review the details to ensure they are complete.

\* Click Accept to move it to the next phase.

Explanation : "Screening" is a quality gate. It ensures that the maintenance team only spends time planning valid, well-described issues. Once accepted, the notification moves from the Initiation phase to the Screening phase and finally becomes available for planning.

Step 3: Create and Plan the Phase-Based Order

Now you will create the formal work order for the accepted request.

\* Create Order : From within the accepted notification, or using the Manage Maintenance Backlog app, choose to Create Order .

\* Enter Planning Data :

\* Technical Object : T-PB48

\* Operation 0010 Description : Repair damage

\* Operation 0010 Work : 2 h

\* Submit for Approval : Look for the Submit for Approval button at the top of the order screen.

Explanation : This step moves the order into the Planning phase. By submitting it for approval, you are requesting the budget and resources to perform the work. The order status will change to indicate it is "Waiting for Approval"

## NEW QUESTION # 12

Create a Maintenance Order with Checklists

The project team evaluates during the implementation project Maintenance Orders with Checklists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Maintenance Order with Checklist
- \* Display a Maintenance Order with automatically generated Object List and Checklist.
- \* Create a Maintenance Order using an Order Type which is already configured for the checklist process.

Use the following data:

Field	Value
Functional Location	##-01-PRD-01-03-HD
General Maintenance Task List	SAP / T-PMCLEN / 1

- \* Display the previously created Maintenance Order with automatically generated Object List and Checklist.

## Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 12 Overview

In this task, you will create a maintenance order using a specific order type configured for the checklist process. The system will then automatically generate an object list and a corresponding checklist based on the equipment and task list assigned.

Step 1: Create a Maintenance Order with Checklist

You need to create a new order using a functional location and a specific task list that triggers the checklist functionality.

- \* Access the Transaction : Use transaction code IW31 (Create Maintenance Order).
- \* Initial Screen :
- \* Order Type : Select an order type already configured for the checklist process (typically PM01 or a specific custom type designated for checklists in your training environment).
- \* Press Enter .
- \* Enter Header and Location Data :
- \* Functional Location : Enter 48-01-PRD-01-03-HD .
- \* Description : Enter a relevant description (e.g., Pump Checklist Maintenance GR48).
- \* Assign the Task List :
- \* Go to the Operations tab or find the task list assignment section.
- \* General Maintenance Task List : Enter A / T-PMCLEN / 1 .
- \* Press Enter to validate.
- \* Save : Click the Save (floppy disk) icon.

Explanation : By assigning this specific functional location and general task list, you are triggering the "Checklist" integration. The system uses the classification data you set up in Task 11 to determine that a checklist (inspection lot) is required for this job.

Step 2: Display and Verify the Checklist

After saving, you must verify that the system correctly generated the technical components of the checklist.

- \* Display the Order : Use transaction code IW33 and enter the order number you just created.
- \* Verify the Object List :
- \* Navigate to the Object List tab.
- \* You should see the equipment or functional location listed here with a link to the checklist.
- \* Verify the Checklist :
- \* Look for a button or tab labeled Checklists or Inspection Lot within the order.
- \* The system should show that a checklist has been automatically generated for the repair operations.

Explanation : The goal of this step is to confirm that the "Object List" and "Checklist" were created automatically by the system. This proves the background configuration for QM (Quality Management) integration is working correctly with your maintenance order

**NEW QUESTION # 13**

Create a Task List

The project team evaluates during the implementation project Task Lists in SAP S/4HANA Asset Management. The following features need to be checked:

- \* Create a Task List header
- \* Create Task List operations
- \* Create a Task List with 3 Task List operations. Maintenance Strategy Z## comprises Maintenance Packages with different hierarchy levels.

Use the following information at header level of the Task List:

Field	Value
Group	TA-##
Group Counter	1
Planning Plant	1010
Description	Regular Maintenance GR##
Work Center	MK-00
Work Center Plant	1010
Usage	4
Planner Group	P##
Maintenance Strategy	Z##

Use the following information for each Task List operation:

Field	Value
Work Ctr	MK-00
Plnt	1010
Control Key	PM01
Work	30
Unit	MIN

\* Assign Maintenance Packages to the Task List Operations as follows:

- \* Operation 10 is to be performed monthly.
- \* Operation 20 is to be performed every 4 months.
- \* Operation 30 is to be performed every 12 months.

**Answer:**

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Since we encountered that error with the Z48 strategy , we must ensure that is fixed before we can finish the Task List. Here is the complete, verified, step-by-step process to finalize Task 7 , including the "hidden" pre- requisite.

Task 7: Create a General Task List

Objective : To create a standardized template of maintenance steps that can be automatically pulled into future work orders based on a schedule.

Step 1: The Pre-requisite (Fixing Strategy Z48)

If you haven't done this yet, SAP will not let you save the Task List.

- \* Transaction : IP11 (Maintain Maintenance Strategies).
- \* Action : Click New Entries .
- \* Strategy : Z48
- \* Description : Strategy for Group 48
- \* Strategy Unit : MON (Months).
- \* Packages : On the left, double-click Packages , then click New Entries :
- \* Line 1 : Cycle 1 / Unit MON / Text Monthly

\* Line 2 : Cycle 4 / Unit MON / Text Every 4 Months

\* Line 3 : Cycle 12 / Unit MON / Text Yearly

\* Save (Floppy Disk icon).

Explanation : A strategy is the "calendar" that defines how often work happens. Without this, the system doesn't know what "Monthly" or "Yearly" means.

Step 2: Create Task List Header

\* Transaction : IA05 .

\* Initial Screen : Group TL-48, Group Counter 1. Press Enter .

\* Header Fields :

\* Description : Regular Maintenance GR48

\* Planning Plant : 1010

\* Work Center : MK-00 / Plant : 1010

\* Usage : 4 (Plant Maintenance)

\* Status : 4 (Released)

\* Planner Group : P48

\* Maint. Strategy : Z48

Explanation : The header defines who is responsible for the work (Planner Group P48) and which scheduling rules (Strategy Z48) apply to the whole list.

Step 3: Create Operations

\* Click the Operations button (F6) at the top.

\* Enter three rows with this data:

\* Op 10 : Work Center MK-00, Plant 1010, Control Key PM01, Work 30, Unit MIN.

\* Op 20 : (Same as above).

\* Op 30 : (Same as above).

Explanation : Operations are the actual steps the technician follows. Here, we are saying each step takes 30 minutes of mechanical labor.

Step 4: Assign Maintenance Packages (The "Frequencies")

This is the most important part of Task 7. We tell SAP which operation happens when.

\* Select Row 10 (click the box at the far left of the row).

\* Go to Menu: Goto > Maintenance Packages .

\* Check the box for the 1 Month package. Click the Back (Green Arrow) icon.

\* Select Row 20 .

\* Go to Goto > Maintenance Packages and check the 4 Month package. Click Back .

\* Select Row 30 .

\* Go to Goto > Maintenance Packages and check the 12 Month package. Click Back .

Explanation : Now, SAP knows that Op 10 happens every month, but Op 30 only happens once a year.

Step 5: Save

\* Click the Save icon.

\* The message at the bottom should say: "Task list TL-48 saved with group counter 1" .

## **NEW QUESTION # 14**

Create a Maintenance Plan

The project team evaluates during the implementation project Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Create a Maintenance Plan

Create a Maintenance Plan and save it. Use the following information:

Field	Value
Maint. Plan cat. (via SAP GUI) Maintenance Plan for (via FLP)	Maintenance Order
Maintenance Strategy	Z##
Description	Regular pump maintenance - Z##
Equipment	T-PA##
Order Type	PM02
Task List Type	A
Group	TL-##
Counter	1

**Answer:**

**Explanation:**

See the Explanation for complete Solution of this Task.

**Explanation:**

Task 8: Create a Maintenance Plan

The objective of this task is to create a strategy-based maintenance plan that will automatically generate work orders for your pump based on the frequencies defined in your task list.

Step 1: Access the Transaction

\* Transaction Code : Enter IP42 in the command field and press Enter .

\* Initial Screen :

\* Maintenance Plan Category : Select Maintenance Order (or "Maintenance plan for Maintenance Order" if using the Fiori Launchpad).

\* Maintenance Strategy : Enter Z48 .

\* Press Enter .

Step 2: Enter Header and Maintenance Item Data

Once you are on the main creation screen, fill in the "Maintenance Item" section to define what is being maintained and how the orders should look:

\* Description : Enter Regular pump maintenance Z48 .

\* Equipment : Enter T-PA48 .

\* Planning Plant : This should default to 1010 based on the equipment, but ensure it is correct.

\* Order Type : Enter PM02 .

Explanation : By assigning Equipment T-PA48 and Order Type PM02 , you are telling SAP to generate a specific "Planned" maintenance order every time this schedule is triggered.

Step 3: Link the Task List

This step connects the plan to the specific maintenance steps (operations) you created in Task 7.

\* Look for the Task List section at the bottom of the screen.

\* Task List Type : Enter A (General Task List).

\* Group : Enter TL-48 .

\* Counter : Enter 1 .

\* Press Enter to validate the connection. You should see the description "Regular Maintenance GR48" appear.

Explanation : Linking the Task List ensures that when the maintenance plan generates an order, it automatically copies the 30-minute operations you defined earlier into that order.

Step 4: Set Scheduling Parameters (Optional but Recommended)

While the table in your document focuses on the data above, typically you would click the Maintenance Plan Scheduling Parameters tab to ensure the "Scheduling Period" and "Start Date" are set. However, for the assessment, the mandatory data is what we entered in Steps 1-3.

Step 5: Save

\* Click the Save (floppy disk) icon.

\* Note your Maintenance Plan Number : The system will display a message at the bottom, such as

"Maintenance plan 123 saved." Write this number down , as you will need it for Task 9: Schedule a Maintenance Plan .

Task 8 is now complete! You have built the automated "brain" that will handle the recurring maintenance for your pump.

### NEW QUESTION # 15

Schedule a Maintenance Plan

The project team evaluates during the implementation project the scheduling of Maintenance Plans in SAP S/4HANA Asset Management. The following features need to be checked:

Schedule a Maintenance Plan

Display a generated Maintenance Order

Schedule the previously created Maintenance Plan. The following prerequisites have to be met:

The next upcoming call is the 4 MON Maintenance Package

Calculate the Completion Date of the last Maintenance Package as follows: Today's date minus 4 weeks (e.g.

today's date: 15th of December >>> Completion Date: 17th of November) The Call Date is always 10 days before the Plan Date.

Note:

Check your Maintenance Plan and adapt it, if necessary, before you schedule it.

Check the following information in the generated Maintenance Order:

number of order operations: 2

Maintenance Plan: number of the previously created Maintenance Plan

Last Included Task List: A / TL-## / 1

### Answer:

Explanation:

See the Explanation for complete Solution of this Task.

Explanation:

Task 9 Overview

The goal of this task is to trigger the maintenance schedule you built in Task 8 so that the system generates an actual work order.

You must meet specific scheduling conditions to ensure the right maintenance cycle (the 4- month package) is triggered.

Step 1: Adapt Scheduling Parameters (IP02)

Before starting the schedule, you must ensure the "Call Date" rules are correct.

\* Transaction : Enter IP02 (Change Maintenance Plan).

\* Maintenance Plan : Enter the number you saved in Task 8 and press Enter .

\* Scheduling Parameters Tab :

\* Call Horizon : Adjust this so that the Call Date occurs exactly 10 days before the Plan Date.

\* Note: If your system uses percentages, you will need to calculate the percentage of the 4-month cycle that results in a 10-day lead time.

\* Save your changes.

Step 2: Schedule the Plan (IP10)

Now you will "start" the clock for this maintenance schedule.

\* Transaction : Enter IP10 (Schedule Maintenance Plan).

\* Maintenance Plan : Enter your plan number and press Enter .

\* Start Scheduling : Click the Start icon (or go to Maintenance plan > Scheduling > Start ).

\* Enter the "Start Date" / "Completion Date" :

\* The Rule : You must use Today's date minus 4 weeks .

\* Example: If today is April 19, enter March 22.

\* Press Enter . The system will calculate the next calls.

\* Verify the Package : Ensure the next upcoming call is indeed the 4 MON (4-month) Maintenance Package.

\* Save (Floppy Disk icon). This will generate a new Maintenance Order number.

Step 3: Verify the Generated Maintenance Order

You must now check that the order was created correctly based on the rules of your Task List (Task 7) and Maintenance Plan (Task 8).

\* Display Order : In IP10 , select the line for the generated call and click the Display Order icon (or use transaction IW33 with the new order number).

\* Check the following three items :

\* Operations : Verify there are exactly 2 operations in the order (the Monthly and 4-Month tasks).

\* Maintenance Plan : Confirm the order shows your specific Maintenance Plan number.

\* Task List : Verify the "Last Included Task List" is A / TL-48 / 1 .
