Valid Workday-Pro-HCM-Reporting Test Duration & Workday-Pro-HCM-Reporting Valid Test Online

For quick and complete Workday Pro HCM Reporting Certification Exam (Workday-Pro-HCM-Reporting) exam preparation you can trust ValidDumps Workday Workday-Pro-HCM-Reporting Exam Questions. With the Workday Workday-Pro-HCM-Reporting practice test questions you can ace your Workday Pro HCM Reporting Certification Exam (Workday-Pro-HCM-Reporting) exam preparation and be ready to perform well in the final Workday Workday-Pro-HCM-Reporting certification exam.

Workday Pro HCM Reporting Certification Exam Sample Questions (Q49-Q54):

NEW QUESTION # 49

A worker report uses a filter based on the Location field, using the comparison type Prompt the user for a value. A user runs this report and leaves the prompt value blank.

What Worker instances display on the output?

- A. Only Worker instances where the Location field value is blank
- **B. All Worker instances, regardless of the value of the Location field**
- C. Only Worker instances where there is a value of the Location field
- D. No Worker instances, regardless of the value of the Location field

Answer: B

Explanation:

Workday report filters allow prompts so users can enter values when running a report. If the prompt value is left blank, Workday treats it as though no filter condition has been applied, so the system returns all available Worker instances regardless of the Location field.

From the Workday Reporting guide:

"Prompts - You can further narrow and refine your report results by having the user complete prompt fields before they run the report. You can set default values for prompts... If left blank, the filter condition is ignored and all data is returned." Therefore, the correct answer is D. All Worker instances, regardless of the value of the Location field.

NEW QUESTION # 50

You are building a report that shows employee performance ratings and their associated performance review details. The report uses the Performance Review primary business object. Using a calculated field, what formula should you use to retrieve the employee's job title from the related Worker business object?

- A. Aggregate Related Instances
- B. Lookup Range Band
- **C. Lookup Related Value**
- D. Evaluate Expression Band

Answer: C

Explanation:

The correct choice is Lookup Related Value, because this function allows you to retrieve a field from a related business object that is not directly stored on your primary object. In this scenario, the primary business object is Performance Review, which holds

performance-related data but not job-related data such as Job Title. Since Job Title resides on the Worker business object, you need to link from Performance Review to Worker and then retrieve Job Title.

The Workday reporting guide explains: "Lookup Related Value - Returns a field from a related business object. Use this to bring data from associated objects into a report when the field is not directly available on the primary object." This ensures the Performance Review data can be combined with Job Title for meaningful insights.

By contrast, Aggregate Related Instances is used to roll up multiple related values, Range Band applies thresholds, and Evaluate Expression Band is used for conditional ranges, not cross-object retrieval.

NEW QUESTION # 51

You are configuring a waterfall visualization showing employee movement. To properly display the information, you need the Termination Count field to return as a negative number.

- A. Extract Single Instance
- B. Numeric Constant
- C. Format Number
- **D. Arithmetic Calculation**

Answer: D

Explanation:

When creating custom reports and visualizations, calculated fields can transform values. To change positive counts into negative values (such as terminations in a waterfall chart), you use the Arithmetic Calculation function. This function allows you to perform math operations (addition, subtraction, multiplication, division) on numeric fields. By multiplying the Termination Count by -1, the result displays as a negative number.

From Workday Reporting documentation:

"Arithmetic Calculation - Performs mathematical operations on numeric fields. You can create new numeric outputs such as percentages, ratios, or negatives by applying arithmetic logic." Thus, the correct answer is C. Arithmetic Calculation.

NEW QUESTION # 52

You are building a report to identify employees who have exceeded the allowed number of 10 sick days in the current year.

Using the Sick Days Taken field, what is the correct formula to create a Boolean calculated field that returns True if an employee has exceeded the allowed number of sick days?

- A. Sick Days Taken >= 10
- B. Sick Days Taken = 10
- C. Sick Days Taken = False
- **D. Sick Days Taken > 10**

Answer: D

Explanation:

To check whether a worker's sick days exceed the threshold of 10, you must define a Boolean condition. The expression Sick Days Taken > 10 evaluates to True when the value is greater than 10, and False otherwise.

From Workday Reporting documentation:

"True/False conditions can be created using numeric comparisons such as greater than (>), less than (<), or equal to (=). These return True or False depending on the worker's data." Thus, the correct formula is A. Sick Days Taken > 10.

NEW QUESTION # 53

How can you capture proposed values relating to a business process event on a report?

- A. Configure Lookup Value as of Date calculated fields that return field values as of the date before the business process events occurred.
- B. Use a data source that is enabled for effective dating.
- **C. Use an event-related business object as the primary business object or as a related business object.**
- D. Apply a report filter that only returns data that contains "proposed" in the field name.

Answer: C

Explanation:

To capture proposed values from a business process event, you must use an event-related business object. For example, a Staffing Event business object can provide both the current and proposed values of job, location, or compensation during a transaction.

The Workday binder clarifies: "The report data source provides the view into the primary business object. This object gives you access to class report fields as well as links to related business objects." By selecting an event-related object as the report's data source, you can retrieve pending changes alongside existing values.

Other answers are insufficient: "effective dating" only retrieves data snapshots, and filters cannot detect "proposed" unless tied to the correct object. Lookup Value as of Date would return historical data, not future proposed changes.

NEW QUESTION # 54

.....

One of the best things about our Workday Pro HCM Reporting Certification Exam (Workday-Pro-HCM-Reporting) prep material is the convenience it offers. The Workday Workday-Pro-HCM-Reporting study material is available in three formats: web-based Workday Pro HCM Reporting Certification Exam (Workday-Pro-HCM-Reporting) practice exam, desktop practice test software, and Prepare for your Workday Pro HCM Reporting Certification Exam (Workday-Pro-HCM-Reporting) PDF. We also understand that every student is unique and learns differently, so our product is designed in three formats to adapt to their individual needs.
