ISTQB CT-UT Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Usability Testing: This section measures the practical knowledge of Usability Testers in planning, conducting, analyzing, and reporting formal usability test sessions with users. It outlines test preparation activities including writing test plans, test scripts, and tasks, as well as considerations for test locations and pilot sessions. It explains how to moderate sessions, analyze findings, classify problems by severity, and communicate results effectively to stakeholders.
Topic 2	<ul style="list-style-type: none">• Selecting Appropriate Methods: This domain helps Test Managers make decisions on which usability evaluation methods to apply depending on project context, resources, and maturity. It discusses criteria for selecting usability, user experience, and accessibility evaluation methods suited to different stages of development and organizational needs, including agile development scenarios.

Topic 3	<ul style="list-style-type: none"> • Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.

ISTQB Certified Tester Usability Tester Sample Questions (Q13-Q18):

NEW QUESTION # 13

Which of the following is a principal task of the usability test moderator role?

- **A. Define testing tasks**
- B. Write a usability test plan
- C. Create a survey plan
- D. Log usability problems

Answer: A

Explanation:

The usability test moderator plays a crucial role during the execution phase of a usability test. Their principal task is to facilitate the test sessions by guiding participants through predefined testing tasks, observing behaviors, and ensuring that the test environment is neutral and free from bias. Defining testing tasks, however, is primarily done during the test design phase by the usability test designer or analyst, but the moderator ensures these tasks are clearly communicated and administered to participants during the session. Logging usability problems (option B) is often done by observers or analysts reviewing session recordings or notes, not directly by the moderator during live testing. Creating a survey plan (option C) and writing the usability test plan (option D) are preparatory activities generally done before the test sessions and are not the moderator's main focus. Therefore, the principal role of the moderator centers on conducting the sessions and managing task delivery effectively to obtain authentic user interaction with the system under test.

NEW QUESTION # 14

Which of the following statements about usability test plans is true?

- **A. It contains a schedule**
- B. It contains the results of the test sessions
- C. It should contain the briefing instructions
- D. It should be very elaborate and at least 10 pages

Answer: A

Explanation:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document. Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.

NEW QUESTION # 15

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. Usability testing
- B. User surveys
- **C. Usability Review**
- D. Accessibility Evaluation

Answer: C

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method. Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.

NEW QUESTION # 16

What is good accessibility?

- A. Good usability regardless of disturbances like bright sunlight, noise or wind
- **B. Good usability of a software product by people with limited vision, hearing, dexterity, cognition or physical mobility**
- C. Good usability of a software product by people with limited knowledge of the software
- D. Good usability of a software product on all devices (smart phone, computer, etc.)

Answer: B

Explanation:

Accessibility refers to designing products so that people with disabilities or limitations (permanent or temporary) can use them effectively. According to the Web Content Accessibility Guidelines (WCAG) and ISO standards, accessibility focuses on ensuring that users with vision, hearing, cognitive, or mobility impairments can access digital interfaces. Option D captures this intent accurately. The other options relate to general usability or responsiveness (e.g., device adaptability or user experience in noisy environments) but do not address the inclusive nature of accessibility as defined by official guidelines.

NEW QUESTION # 17

You're conducting a user survey and you have reached the third stage, selecting an appropriate questionnaire.

You have decided to use a standardized questionnaire as you want to benchmark against previous usability measurements.

Which of the following user questionnaires allow benchmarking against previous usability measurements?

- i. SUS
- ii. SUMI
- iii. WAMMI

- A. i is true, ii & iii are false
- **B. i, ii and iii are true**
- C. ii & iii are true, i is false
- D. i & ii are true, iii is false

Answer: B

Explanation:

SUS (System Usability Scale), SUMI (Software Usability Measurement Inventory), and WAMMI (Website Analysis and Measurement Inventory) are all validated, standardized usability questionnaires that support benchmarking. They allow comparison against known usability scores from a wide variety of systems. These instruments provide numeric scores that can be interpreted using benchmark datasets or industry standards.

Therefore, all three-i, ii, and iii-are true, making D the correct answer.
